Subject Index

A

Acanthamobea species: Unsaturated fatty acids, biosynthesis, *Korn*, 396

Acetamidase: Reactions catalyzed by amidases, *Jakoby and Fredericks*, 1978

Acetamide: Iodo-; reaction with modified human hemoglobin, *Guidotti and Konigsberg*, 1474

Acetate: Metabolism in the ruminant, *Sabine and Johnson*, 89

Acetic acid: Trifluoro-; hydrogen chloride and, sorption on poly-L-valine and poly-L-leucine, *Brandt and Budrys*, 1442

Acetoacetic acid: Metabolism, muscle, effect of insulin and deprivation of food, *Beatty, Peterson, Bocek, and West*, 2106

Acetylornithine δ-transaminase: Partial purification and repression behavior, *Albrecht and Vogel*, 1872

Acetyl phosphate: Enzymatic phosphorylation of D-glucose, *Kamel and Anderson*, PC3607

Enzymatic synthesis, carbamyl phosphate synthetase, *Raijman and Grisolia*, 1272

Acetyltransferase: Activity, *Pseudomonas fluorescens* cholinesterase, *Fitch*, 1328

Acid: Expansion of albumin molecule, origin, *Weber and Young*, 1415

-Nonextractable flavin, determination in mitochondrial preparations from heart muscle, *Wilson and King*, 2683

Actin: Divalent cation binding, *Martonosi, Molino, and Gergely*, 1057

G-; transformation to F-actin, adenosine triphosphate cleavage, *Bárány, Koshland, Springhorn, Finkelman, and Therattil-Antony*, 1917

Actinomycin: Glucose 6-phosphatase and fructose 1,6-diphosphatase, cortisone-induced hepatic synthesis, inhibition, *Weber and Singhal*, 521

Actomyosin: Reactions, low ionic strength, influence of tropomyosin, *Katz*, 3304

Acyl compounds: Bound intermediates in fatty acid synthesis, *Goldman*, 3663

Adenine: Lipoprotein secretion, rat liver, induction of inhibition by orotic acid, reversal, *Windmueller*, 530

Adenine dinucleotide: Nicotinamide. *See* Nicotinamide adenine dinucleotide

Adenosine diphosphate: Binding to F-actin, adenosine triphosphate cleavage during G-actin to F-actin transformation, *Bárány, Koshland, Springhorn, Finkelman, and Therattil-Antony*, 1917

Adenosine diphosphate glucose:glycogen transglucosylase: Occurrence in bacteria, *Greenberg and Preiss*, PC4314

Adenosine 3′,5′-phosphate: Activation of epinephrine-sensitive lipolytic activity from adipose tissue, *Rizack*, 392

Adenosine triphosphatase: Activity, effect of parathyroid hormone interaction with oxidative phosphorylation chain, *Sallis and DeLuca*, 4303

Ca^{++} uptake and, sarcoplasmic reticulum, *Martonosi and Feretos*, 659

Mitochondrial; activation by Mg^{++}, kinetic studies, *Ulrich*, 3532

Myofibrillar; studies with calcium-free adenosine triphosphate, mechanism of inhibition by fragmented sarcoplasmic reticulum, *Seidel and Gergely*, 3331

Myosin; activation by γ-(*p*-arsenosophenyl)-*n*-butyrate, *Blum and Sanadi*, 455

—; activation by carbonyl cyanide *p*-chlorophenylhydrazone, *Blum and Sanadi*, 452

Adenosine triphosphate: Binding to myosin, *Martonosi and Meyer*, 640

Calcium-free; studies on myofibrillar adenosine triphosphatase, mechanism of inhibition by fragmented sarcoplasmic reticulum, *Seidel and Gergely*, 3331

Chloroplast structure, *Packer and Marchant*, 2061

Adenosine triphosphate—*Continued*

Cleavage during G-actin to F-actin transformation, binding of adenosine diphosphate to F-actin, *Bárány, Koshland, Springhorn, Finkelman, and Therattil-Antony*, 1917

-Dependent sodium and potassium transport, erythrocyte, stoichiometry and localization, *Sen and Post*, 345

Ferric iron compounds with, *Goucher and Taylor*, 2251

-Inorganic orthophosphate exchange activity and respiratory control, rat liver mitochondria, effects of nutritional deficiency of unsaturated fats, *Ito and Johnson*, 3201

-Orthophosphate exchange reaction, effect of parathyroid hormone interaction with oxidative phosphorylation chain, *Sallis and DeLuca*, 4303

Regulation of nicotinamide adenine dinucleotide biosynthesis, *Nakamura, Nishizuka, and Hayaishi*, PC2717

Substrate and, effect on orthophosphate-induced mitochondrial swelling at acid pH, *Connelly and Lardy*, 3065

-Supported accumulation of Ca^{++}, aged heart mitochondria, *Brierley, Murer, and Bachmann*, 2706

Adenosine triphosphate transphosphorylases: Adenosine triphosphate-creatine transphosphorylase and adenosine triphosphate-adenosine 5′-phosphate transphosphorylase (myokinase), carboxyl-terminal amino acid sequences, *Olson and Kuby*, 460

***S*-Adenosylmethionine : homocysteine methyltransferase:** Purification and properties, methionine biosynthesis in *Saccharomyces cerevisiae*, *Shapiro, Yphantis, and Almenas*, 1551

Adenovirus: Multiplication, deoxyribonucleic acid synthesis enzymes, adenovirus- and vaccinia virus-infected cells, *Green, Piña, and Chagoya*, 1188

Adenylate: Biotinyl-; formation, enzymatic activation of biotin, *Christner, Schlesinger, and Coon,* 3997
Metabolic regulator, effect on yeast phosphofructokinase kinetics, *Ramaiah, Hathaway, and Atkinson,* 3619
Adenylic acid: Muscle phosphorylase *a* kinetics, *Lowry, Schulz, and Passonneau,* 1947
Adenylyl sulfate: Adenylyl sulfate 3′-phosphate and, synthesis, *Cherniak and Davidson,* 2986
Adipic acid: α-Amino-; new metabolite, lysine biosynthesis in yeast, *Kuo, Saunders, and Broquist,* 508
Adipose tissue: Fructose and glucose metabolism, effect of dexamethasone and 2-deoxy-D-glucose, *Fain,* 958
Functional differentiation, newborn rat, phospholipid and plasmalogen changes, *Morrill and Rapport,* 740
Individual fatty acid biosynthesis, effect of diabetes and insulin, *Benjamin and Gellhorn,* 64
Lipase activities, hormone-sensitive and monoglyceride-specific, *Vaughan, Berger, and Steinberg,* 401
Lipids, formate incorporation, *Gliemann and Dole,* 4062
Lipolytic activity, epinephrine-sensitive, activation by adenosine 3′,5′-phosphate, *Rizack,* 392
Metabolism, effect of insulin and epinephrine on major pathways of glucose catabolism, *Flatt and Ball,* 675
Rat; glucose metabolism, pathways, quantitative estimation *in vitro, Landau and Katz,* 697
—; lipoprotein lipase localization in fat cells, *Rodbell,* 753
Adrenals: Bovine; isolation of cholesterol sulfate, *Drayer, Roberts, Bandi, and Lieberman,* PC3112
Homogenates, stimulation of corticosteroidogenesis by serum protein, *Makoff, Roberts, and Fowler,* 4124
Aerobacter aerogenes: L-Arabitol and xylitol, metabolic pathways, *Fossitt, Mortlock, Anderson, and Wood,* 2110
Agaricaceae: γ-Glutamyl-substituted arylhydrazine derivative, isolation and properties, *Levenberg,* 2267
Agaricus bisporus: γ-Glutamyltransferase, *Gigliotti and Levenberg,* 2274
Agaritine: Isolation and structure, γ-glutamyl-substituted arylhydrazine derivative from Agaricaceae, *Levenberg,* 2267
Agrobacterium tumefaciens: Phosphatidylcholine synthesis, purification and properties of phosphatidylethanolamine *N*-methyltransferase, *Kaneshiro and Law,* 1705
Alanine: -Containing glucosaminylmuramic acid derivative liberated by lysozyme from streptococcal glycopeptide, characterization, *Heymann, Manniello, and Barkulis,* 2981
γ-L-Glutamyl-L-; iris leaf tissue, *Morris, Thompson, and Asen,* 1833
D-; glycine and, enzyme-substrate complexes with serine transhydroxymethylase, properties, *Schirch and Jenkins,* 3801
—; transamination by serine transhydroxymethylase, *Schirch and Jenkins,* 3797
β-Alanine: Transport in Ehrlich cell, relation to α-amino acid transport, *Christensen,* 3584
Albumin(s): Bovine plasma; pH-dependent transitions, deuterium-hydrogen exchange analysis, *Benson, Hallaway, and Lumry,* 122
Bovine serum; fragmentation by pepsin, isolation, amino acid composition, and physical properties of fragments, *Weber and Young,* 1424
—; —, origin of expansion of albumin molecule in acid, *Weber and Young,* 1415
—; reaction with cyanide, *Catsimpoolas and Wood,* 4132
Fatty acid effects on oxidation and phosphorylation reactions in rat liver mitochondria, antagonism, *Björntrop, Ells, and Bradford,* 339
Human serum; indole analogue binding, effect of chloride concentration, *McMenamy,* 2835
—; thyroxine binding, *Tabachnick,* 1242
Modified; thyroxine binding, *Tabachnick,* 1242
Plasma; tyrosine derived from phenylalanine, anomalous behavior, *Ito, Guroff, and Udenfriend,* 3385
Serum; denaturation, mechanism of
Albumin(s)—*Continued*
protection by anionic detergents, *Markus, Love, and Wissler,* 3687
Serum; myoglobin derivatives and, comparison of cupric ion-binding sites, *Breslow* 3252
Alcaligenes faecalis: Xanthine-8-carboxylic acid metabolism, *Dairman and McNutt,* 3407
Alcohol dehydrogenase: Liver; coenzyme binding mechanism, anomalous rotatory dispersion of enzyme complexes, *Li and Vallee,* 792
Yeast and liver; equilibrium reaction rates and mechanisms, *Silverstein and Boyer,* 3908
Aldehyde(s): Amino-, *See* Aminoaldehydes
Cyclopropane; composition of aldehydes of *Clostridium butyricum* plasmalogens, *Goldfine,* 2130
Aldehyde oxidase: Hepatic; differential inhibition of electron transfer to various electron acceptors, *Rajagopalan and Handler,* 2022
—; substrate-binding site, *Rajagopalan and Handler,* 2027
Aldolase: Crystalline; effect of ionic strength on activity, mechanism, *Sánchez de Jiménez, Lee, Torres, and Soberón,* 4154
Deoxyribose phosphate. *See* Deoxyribose phosphate aldolase
2-Keto-3-deoxy-6-phosphogluconic. *See* 2-Keto-3-deoxy-6-phosphogluconic aldolase
2-Keto-4-hydroxyglutarate. *See* 2-Keto-4-hydroxyglutarate aldolase
Rabbit muscle; carboxyl- and amino-terminal residues, *Winstead and Wold,* 4212
Aldosterone: Metabolism, pathway, isolation, characterization, and synthesis of metabolites, *Kohler, Hesse, and Pechet,* 4117
Alkali: Dilute; reactions with N^1-methylnicotinamide cation and analogues, *Martin and Hull,* 1237
-Treated wood, new cross-links, *Ziegler,* PC2713
Treatment of proteins, formation of new amino acid, N^ϵ-(DL-2-amino-2-carboxyethyl)-L-lysine, *Bohak,* 2878
Alkaline phosphatase: *Escherichia coli;* transphosphorylation, *Wilson, Dayan, and Cyr,* 4182
Alkylammonium ions: Trypsin catalysis, activation of catalytic site,

Alkylammonium ions—*Continued*
hydrolysis of acetylglycine ethyl ester, *Inagami and Murachi*, 1395
Inhibition of specificity, *Inagami*, 787
ε-Alkyllysinase: Purification and properties, *Kim, Benoiton, and Paik*, 3790
Allergens: Chemistry, ion exchange fractionation of castor bean allergen CB-1A, antigenic specificity relationships of fractions, *Spies and Coulson*, 1818
Alloxan: Uridine nucleotide biosynthesis from uracil, *Younathan, Stone, and Harris*, 290
Alloxan diabetes: rat, hepatic uridine diphosphate glucose-glycogen glucosyltransferase synthesis, insulin administration, *Steiner and King*, 1292
Amethopterin: -Resistant *Diplococcus pneumoniae*, dihydrofolate reductase in distinct genotype, *Sirotnak, Donati, and Hutchison*, 2677
—, genetic modification of structure and amount of dihydrofolate reductase, *Sirotnak, Donati, and Hutchison*, 4298
Amidases: Reactions catalyzed by, acetamidase, *Jakoby and Fredericks*, 1978
Amidotransferase: Glutamine-phosphoribosyl pyrophosphate. *See* Glutamine-phosphoribosyl pyrophosphate amidotransferase
Aminase: Xanthosine 5′-phosphate. *See* Xanthosine 5′-phosphate aminase
Amine: Cleavage, nucleotide sequence analysis of polyribonucleotides, *Neu and Heppel*, 2927
Amine oxidase: Plasma; purified, oxidation of spermine and spermidine, identification of aminoaldehydes, *Tabor, Tabor, and Bachrach*, 2194
Amino acid(s): Adenosine triphosphate-adenosine 5′-phosphate transphosphorylase, carboxyl-terminal sequence, *Olson and Kuby*, 460
Adenosine triphosphate - creatine phosphate transphosphorylase, carboxyl-terminal sequence, *Olson and Kuby*, 460
Carbon, incorporation into proteins, fatty acids, and carbon dioxide, lactating rat mammary gland slices, effect of glucose, *Abraham, Madsen, and Chaikoff*, 855
Amino acid(s)—*Continued*
Citrobacter freundii, comparison with 4-oxonorleucine, *Barry and Roark*, 1541
Composition, bovine serum albumin molecular fragments, *Weber and Young*, 1424
—, human and bovine serum mercaptalbumins, *Spahr and Edsall*, 850
Incorporation, maize system, involvement of soluble ribonucleic acid, *Mans, Purcell, and Novelli*, 1762
—, peptide linkage, protein synthesis in plant mitochondria, *Das, Chatterjee, and Roy*, 1126
Migration across human erythrocyte membrane, *Winter and Christensen*, 872
-Polar lipid complex, *Pseudomonas aeruginosa*, structural composition, *Sinha and Gaby*, 3668
Polymerization systems, cell-free, differences in chloramphenicol sensitivity, *Kućan and Lipmann*, 516
Rabbit muscle aldolase, carboxyl- and amino-terminal residues, *Winstead and Wold*, 4212
α-Amino acids: Poly-. *See* Poly-α-amino acids
Transport in Ehrlich cell, relation to β-alanine transport, *Christensen*, 3584
Amino acid acceptor ribonucleic acid: Selective phosphorylation of phosphomonoester groups, *RajBhandary, Young, and Khorana*, 3875
Aminoacyl ribonucleic acid synthetase: Altered form; *Escherichia coli* mutant, *Fangman and Neidhardt*, 1839
—; —, protein and ribonucleic acid synthesis, *Fangman and Neidhardt*, 1844
Aminoaldehydes: Spermine and spermidine oxidation with purified plasma amine oxidase, identification, *Tabor, Tabor, and Bachrach*, 2194
Amino group reagents: Inhibition of xanthine oxidase, *Greenlee and Handler*, 1096
Aminopterin: Reduced derivatives, properties, *Kisliuk and Levine*, 1900
Ammonium ions: Alkyl-. *See* Alkylammonium ions
5α-Androstane-3α, 17β-diol-17α-^{3}H: Testosterone-17α-^{3}H conversion to, new "17β-hydroxyl pathway," *Baulieu and Mauvais-Jarvis*, 1569
5α-Androstane-3α, 17β-diol-17α-^{3}H—*Continued*
new "17β-hydroxyl pathway," *Baulieu and Mauvais-Jarvis*, 1569
5β-Androstane-3α, 17β-diol-17α-^{3}H: Testosterone-17α-^{3}H conversion to, new "17β-hydroxyl pathway," *Baulieu and Mauvais-Jarvis*, 1569
5α-Androstane-3, 17-dione-^{14}C: Isolation, androst-4-ene-3, 17-dione-4-^{14}C metabolism *in vitro*, rabbit skeletal muscle strips, *Thomas and Dorfman*, 762
Androst-4-ene-3, 17-dione: Metabolism, effects of experimental diabetes, *Gold and Garren*, 2786
Androst-4-ene-3, 17-dione-4-^{14}C: Conversion to 3β-hydroxyandrost-4-en-17-one-^{14}C and 3β-hydroxyandrost-5-en-17-one-^{14}C, reversal of 3β-hydroxysteroid dehydrogenase-isomerase reactions, *Ward and Engel*, PC3604
Metabolism, rabbit skeletal muscle strips, isolation of testosterone-^{14}C, 5α-androstane-3, 17-dione-^{14}C, and 3β-hydroxy-5α-androstan-17-one-^{14}C, *Thomas and Dorfman*, 762
—, rabbit skeletal muscle supernatant, isolation of 3β-hydroxyandrost-4-en-17-one-^{14}C and testosterone-^{14}C, *Thomas and Dorfman*, 766
Androst-4-ene-3, 17-dione-1, 2-^{3}H: Testosterone-4-^{14}C and, metabolism, *Baulieu and Mauvais-Jarvis*, 1578
Anhydrases: Carbonic. *See* Carbonic anhydrases
Anhydride: Dipeptide-diphosphate; intermediate formation, enzymatic tripeptide synthesis, *Nishimura, Dodd, and Meister*, 2553
Anions: Cations and, balance during active accumulation of Ca^{++} and Mg^{++} by isolated mitochondria, *Carafoli, Rossi, and Lehninger*, 3055
Anoxia: Hexokinase and phosphofructokinase activity in heart muscle, *Regen, Davis, Morgan, and Park*, 43
Anthranilic acid: Enzymatic formation of catechol, *Taniuchi, Hatanaka, Kuno, Hayaishi, Nakajima, and Kurihara*, 2204
Antibiotics: Tetracycline; mode of action in *Staphylococcus aureus*, *Hash, Wishnick, and Miller*, 2070

XUM

Antibody: Antihapten fragment, univalent, unfolding and renaturation, *Noelken and Tanford*, 1828
Soluble fragments, interaction with muscle phosphorylase, *Michaelides, Sherman, and Helmreich*, 4171
Antigen(s): Staphylococcal polysaccharide; structural studies, *Hanessian and Haskell*, 2758
Synthetic polypeptide; antigenicity of optically isomeric synthetic polypeptides, *Gill, Kunz, Gould, and Doty*, 1107
—; effects of pH, ionic strength, temperature, and nonaqueous solvents on antibody activity and antibody-synthetic polypeptide interaction, *Gould, Gill, and Kunz*, 3071
—; effects of variation in composition and chemical modification of synthetic polypeptides on antibody-synthetic polypeptide antigen interaction, *Gill, Gould, and Kunz*, 3083
Aorta: Mucopolysaccharide composition, copper-deficient swine, *Linker, Coulson, and Carnes*, 1690
Apomyoglobin: Sperm whale; heme binding, changes in side chain reactivity, *Breslow*, 486
Apotranscarboxylase: (+)-Biotin and, synthesis of holotranscarboxylase, investigation of reaction mechanism, *Lane, Rominger, Young, and Lynen*, 2865
—, —, purification of apoenzyme and synthetase, characteristics of reaction, *Lane, Young, and Lynen*, 2858
Arabitol: L-; metabolic pathways, *Aerobacter aerogenes, Fossitt, Mortlock, Anderson, and Wood*, 2110
Archibald experiments: Myosin and meromyosins, molecular weight, increasing speed of rotations, *Mueller*, 797
Arginase: Levels in rat liver, control, importance of both synthesis and degradation, *Schimke*, 3808
Arginine: Metabolism, enzymes, mammalian cell culture, repression of argininosuccinate synthetase and argininosuccinase, *Schimke*, 136
Pyrimidine precursor, strain L-929 fibroblasts infected with pleuropneumonia-like organisms, *McCarty, Woodson, Amstey, and Brown*, 544
Argininosuccinase: Reaction, stereospecificity, biosynthesis of urea, **Argininosuccinase**—*Continued* *Hoberman, Havir, Rochovansky, and Ratner*, 3818
Repression, mammalian cell culture, *Schimke*, 136
Argininosuccinate synthetase: Repression, mammalian cell culture, *Schimke*, 136
Arginyl ribonucleic acid synthetase: Rat liver; purification, substrate specificity, *Allende and Allende*, 1102
Arsenate: Mitochondrial swelling and lipid peroxide formation, oxidized and reduced glutathione, *Hunter, Scott, Weinstein, and Schneider*, 622
Succinic thiokinase, *Cha and Parks*, 1968
Arthrobacter: Sugar nucleotide reactions, biosynthesis of guanosine diphosphomannuronate, *Preiss*, 3127
—, purification and properties of guanosine diphosphate mannose pyrophosphorylase, *Preiss and Wood*, 3119
Ascaris lumbricoides: Chymotrypsin inhibitor, further purification, reactions with chymotrypsins α and B, *Peanasky and Szucs*, 2525
Ascites cells: Ehrlich; nicotinamide adenine dinucleotide glycohydrolase, *Green and Bodansky*, 2613
Glycolytic pathway, computer model, *Garfinkel and Hess*, 971
Nicotinamide adenine dinucleotide synthesis *in vitro*, *Dietrich and Fuller*, 1653
Ascorbate: Induction of swelling and lysis of isolated liver mitochondria, *Hunter, Scott, Hoffsten, Guerra, Weinstein, Schneider, Schutz, Fink, Ford, and Smith*, 604
Ascorbate oxidase: Activity in ceruloplasmin, proof, *Osaki, McDermott, and Frieden*, 3570
Ascorbic acid: Metabolism in man, quantitative aspects, *Atkins, Dean, Griffin, and Watts*, 2975
Asparagine synthetase: *Streptococcus bovis*, purification and properties, *Burchall, Reichelt, and Wolin*, 1794
Aspartase: β-Methyl-. *See* β-Methylaspartase
Aspartate β-decarboxylase: Activity, control by transamination, *Novogrodsky and Meister*, 879
Aspartic acid: *erythro*-β-Hydroxy-; glutamic-aspartic transaminase, equilibrium kinetics, *Jenkins*, 1742
Aspartokinase: *Bacillus polymyxa*, multivalent feedback inhibition, *Paulus and Gray*, PC4008
Aspergillus fonsecaeus: Pectin *trans*-eliminase, *Edstrom and Phaff*, 2403

B

Bacillus: Nicotinic acid oxidation, pathway, *Ensign and Rittenberg*, 2285
Bacillus licheniformis: Protease, postlogarithmic phase metabolism of sporulating microorganisms, *Bernlohr*, 538
Bacillus megaterium: Respiration-coupled and passive uptake of α-aminoisobutyric acid, *Marquis and Gerhardt*, 3361
Bacillus polymyxa: Aspartokinase, multivalent feedback inhibition, *Paulus and Gray*, PC4008
Polymyxin B biosynthesis, growing cultures, *Paulus and Gray*, 865
Bacillus subtilis: Cell walls, autolysis, mechanism and possible relation to competence, *Young, Tipper, and Strominger*, PC3600
Hexitol dehydrogenases, *Horwitz and Kaplan*, 830
Neutral proteinase, zinc enzyme of high specific activity, *McConn, Tsuru, and Yasunobu*, 3706
Nicotinamide adenine dinucleotide biosynthesis, regulation, enzyme repression, *Gholson and Kori*, PC2399
Polymerase, purification and properties, enzymatic synthesis of deoxyribonucleic acid, *Okazaki and Kornberg*, 259
Bacteria: Adenosine diphosphate glucose:glycogen transglucosylase, occurrence, *Greenberg and Preiss*, PC4314
Δ^9- and Δ^5-monosaturated fatty acid biosynthesis, *Fulco, Levy, and Bloch*, 998
Bacterial systems: Fractionated; oxidative phosphorylation, reduced nicotinamide adenine dinucleotide phosphate-linked phosphorylation, *Murthy and Brodie*, 4292
—; —, respiratory chains of *Mycobacterium phlei*, *Asano and Brodie*, 4280
Bacteriophage(s): Streptococcal; muralysin, purification and properties,

Bacteriophages—*Continued*
Barkulis, Smith, Boltralik, and Heymann, 4027
Bacteriophage 434: Formation, purification and properties of associated deoxyribonucleic acid exonuclease, *Korn and Weissbach,* 3849
Bacteriophage T1 and λ: Infectious deoxyribonucleic acid, *Brody, Coleman, Mackal, Werninghaus, and Evans,* 285
Bacteriophage T2: Induction of deoxyribonuclease, *Oleson and Koerner,* 2935
Bacterium anitratum: Glucose dehydrogenase, novel prosthetic group, *Hauge,* 3630
Balanoglossus biminiensis: Extracts, bioluminescence, kinetic comparison of luminescent and nonluminescent peroxidation reactions, proposed mechanism for peroxidase action, *Dure and Cormier,* 2351
Benzene: Ethylene-^{14}C and -^{3}H, avocado, *Jansen,* 1664
Bile acids: Biosynthetic mechanisms, study with 3α-^{3}H- and 4β-^{3}H-cholesterol, *Gréen and Samuelsson,* 2804
Cholic acid, transformation *in vitro*, *Corynebacterium simplex, Hayakawa and Samuelsson,* 94
Lithocholic acid-24-^{14}C metabolism, *Thomas, Hsia, Matschiner, Doisy, Elliott, Thayer, and Doisy,* 102
Bioluminescence: *Balanoglossus biminiensis* extracts, kinetic comparison of luminescent and nonluminescent peroxidation reactions, proposed mechanism for peroxidase action, *Dure and Cormier,* 2351
Biose: Group A; C-polysaccharide, streptococcal cell wall structure, *Heymann, Manniello, Zeleznick, and Barkulis,* 1656
Biotin: Enzymatic activation, biotinyl-adenylate formation, *Christner, Schlesinger, and Coon,* 3997
(+)-Biotin: Apotranscarboxylase and, synthesis of holotranscarboxylase, investigation of reaction mechanism, *Lane, Rominger, Young, and Lynen,* 2865
—, —, purification of apoenzyme and synthetase, characteristics of reaction, *Lane, Young, and Lynen,* 2858
Blood: Coagulation, lung microsome activity, *Williams,* 933
Folic acid precursors purification and properties, *Iwai, Luttner, and Toennies,* 2365
Mammalian; reduction of 16-keto-estradiol-17β 16-^{14}C, *Trachewsky and Hobkirk,* 3683
Bone: Metabolic studies *in vitro*, glucose metabolism, collagen biosynthesis, *Flanagan and Nichols,* 1261
Metabolism, hypervitaminosis A and D, *Clark and Smith,* 1266
Borohydride: -Cytochrome *a* reaction, effect of pH and protein-depolymerizing reagents, studies on electron transport system, *Tzagoloff and Wharton,* 582
Brain: Gangliosides, fluorometric assay of sialic acid, *Hess and Rolde,* 3215
Glycolysis, substrate-enzyme relationships, *Lowry and Passonneau,* 31
—, pathway, known substrates and cofactors, effect of ischemia, *Lowry, Passonneau, Hasselberger, and Schulz,* 18
Human; lactic dehydrogenase variant, comparison of action on nucleotide and substrate analogues with human liver and heart variants in presence and absence of oxalate and oxamate, *Nisselbaum, Packer, and Bodansky,* 2830
Intact; phosphoinositides, ion exchange chromatography on diethylaminoethyl cellulose, gradient salt elution, mixed solvent system, *Hendrickson and Ballou,* 1369
Mammalian; γ-hydroxybutyrate, reversible oxidation by lactic dehydrogenase, *Fishbein and Bessman,* 357
Microsomes, α-hydroxy acid decarboxylase, *Levis and Mead,* 77
Particulate preparations, phospholipid, ^{32}P-inorganic orthophosphate incorporation, acetylcholine stimulation, *Durell and Sodd,* 747
Rat; mitochondria, pyruvate utilization, *Deitrich and Hellerman,* 2735
—; soluble fraction, neutral, calcium-activated proteinase, *Guroff,* 149
Ribonucleic acid, dihydrouridine monophosphate and uridine monophosphate incorporation, *Carr and Grisolia,* 160
Butyrate: γ-(*p*-Arsenosophenyl)-*n*-; myosin adenosine triphosphatase activation, *Blum and Sanadi,* 455
γ-Hydroxy-; mammalian brain, reversible oxidation by lactic dehydrogenase, *Fishbein and Bessman,* 357
Butyric acid: γ-(3-Pyridyl)-γ-hydroxy-; metabolic formation, possible intermediary role in mammalian metabolism of nicotine, *McKennis, Schwartz, Turnbull, Tamaki, and Bowman,* 3981

C

^{14}C: Incorporation from labeled nucleotide sugars into polysaccharide, cell-free cartilage preparation, *Silbert,* 1310
Calcium: -Activated neutral proteinase, soluble fraction of rat brain, *Guroff,* 149
Cardiac muscle, relaxation mechanism, *Fanburg, Finkel, and Martonosi,* 2298
-Free adenosine triphosphate, studies on myofibrillar adenosine triphosphatase, mechanism of inhibition by fragmented sarcoplasmic reticulum, *Seidel and Gergely,* 3331
Calcium ions: Accumulation in aged heart mitochondria, adenosine triphosphate-supported, restoration, *Brierley, Murer, and Bachmann,* 2706
Accumulation in rat liver mitochondria, stoichiometry with respiratory stimulation, phosphate accumulation, and oxidative phosphorylation, *Rossi and Lehninger,* 3971
Magnesium ions and, accumulation by isolated mitochondria, cation and anion balance, *Carafoli, Rossi, and Lehninger,* 3055
Sarcoplasmic reticulum, uptake, *Martonosi and Feretos,* 648
—, —, correlation with adenosine triphosphatase activity, *Martonosi and Feretos,* 659
Canavalia ensiformis (jack bean): L-α-Amino-δ-hydroxyvaleric acid and L-homoserine, identification, *Thompson, Morris, and Hunt,* 1122
Cancerous tissue: Human; isolation of glycolipid containing fucose, galactose, glucose, and glucosamine, *Hakomori and Jeanloz,* PC3606
Carbamoyl phosphate:L-aspartate carbamoyltransferase: Activity in

Carbamoyl phosphate:L-aspartate carbamoyltransferase—*Continued*
uteri of immature rats, effect of estradiol-17β, *Tremblay and Thayer*, 3321
Carbamyl phosphate synthetase: Acetyl phosphate and formyl phosphate synthesis, *Raijman and Grisolia*, 1272
Activation by acetylglutamate, mechanism of action, *Fahien, Schooler, Gehred, and Cohen*, 1935
Kinetic study, *Fahien and Cohen*, 1925
Synthesis in liver slices from thyroxine-treated tadpoles, *Tatibana and Cohen*, 2905
Carbinols: Enantiomorphic monotritiated primary; fructose 6-phosphate, intracellular generation, metabolism by rat liver slices, *Bloom*, 2102
Carbohydrate(s): Formation pathways in man, distribution labeling of blood glucose by DL-lactate-2-^{14}C or pyruvate-2-^{14}C in diabetic and nondiabetic subjects, *Shreeve and De Meutter*, 729
Prosthetic group, human γ-globulin, *Clamp and Putnam*, 3233
Repression of dietary and hormonal induction of threonine dehydrase and ornithine δ-transaminase, rat liver, *Peraino and Pitot*, 4308
Utilization, heart homogenates, normal and alloxan-diabetic rats, *Haugaard and Haugaard*, 705
Carboligase: Glyoxylate. *See* Glyoxylate carboligase
Carbon: Amino acid; incorporation into proteins, fatty acids, and carbon dioxide, lactating rat mammary gland slices, effect of glucose, *Abraham, Madsen, and Chaikoff*, 855
Glutamate; conversion to fatty acid carbon via citrate, influence of glucose, lactating rat mammary gland, *Madsen, Abraham, and Chaikoff*, 1305
Carbon dioxide: Amino acid carbon incorporation, lactating rat mammary gland slices, effect of glucose, *Abraham, Madsen, and Chaikoff*, 855
Environmental; glycerol metabolism, rat liver, *in vitro*, *Longmore, Hastings, and Mahowald*, 1700
Photophosphorylation and Hill reaction, enhancement, *Punnett and Iyer*, 2335
Carbonic anhydrases: Human erythrocytes, preparation and properties, *Rickli, Ghazanfar, Gibbons, and Edsall*, 1065
Carbonic anhydrase B: Human; kinetic studies, *Gibbons and Edsall*, 2539
Hydrogen ion equilibria, *Riddiford*, 1079
Carbonic anhydrase C: Human; kinetic studies, *Gibbons and Edsall*, 2539
Carbon monoxide-binding pigment: Liver microsomes, hemoprotein nature, *Omura and Sato*, 2370
—, solubilization, purification, and properties, *Omura and Sato*, 2379
Carbonyl: Addition to nicotinamide adenine dinucleotide in frozen solution, spectral, fluorometric, and optical rotatory properties of oxidized acetone adduct, *Dolin and Jacobson*, 3007
Carbonyl cyanide *p*-chlorophenylhydrazone: Activation of myosin adenosine triphosphatase, *Blum and Sanadi*, 452
Carboxypeptidase(s): Digestion of human hemoglobin, effect of oxygenation, *Zito, Antonini, and Wyman*, 1804
—, oxidation-reduction potentials of heme proteins, *Brunori, Antonini, Wyman, Zito, Taylor, and Rossi-Fanelli*, 2340
Limited degradation of ribonuclease S-protein and S-peptide, effects of changes in primary structure on enzymatic activity, *Potts, Young, Anfinsen, and Sandoval*, 3781
Carboxypeptidase A: Bovine pancreatic; amino- and carboxyl-terminal residues, self-digestion, *Bargetzi, Thompson, Sampath Kumar, Walsh, and Neurath*, 3767
Carnitine: Palmitate incorporation into mitochondrial phospholipids, *Bressler and Friedberg*, 1364
Cartilage: Cell-free preparation, ^{14}C and ^{3}H incorporation from labeled nucleotide sugars into polysaccharide, *Silbert*, 1310
Mucopolysaccharide composition, copper-deficient swine, *Linker, Coulson, and Carnes*, 1690
Proteinpolysaccharide, degradation, use of lanthanum in study, *Doganges and Schubert*, 1498
Casein hydrolysate: Induction of threonine dehydrase and ornithine
Casein hydrolysate—*Continued*
δ-transaminase, rat liver, *Pitot and Peraino*, 1783
Catechol: Degradation, bacterial enzymes, *Dagley and Gibson*, PC1284
Enzymatic formation from anthranilic acid, *Taniuchi, Hatanaka, Kuno, Hayaishi, Nakajima, and Kurihara*, 2204
Cations: Anions and, balance during active accumulation of Ca^{++} and Mg^{++} by isolated mitochondria, *Carafoli, Rossi, and Lehninger*, 3055
Divalent; binding to actin, *Martonosi, Molino, and Gergely*, 1057
Uridine diphosphogalactose 4-epimerase activation, *Darrow and Creveling*, PC362
Cell growth: Inhibition, photooxidation products of indole-3-acetic acid, *Fukuyama and Moyed*, 2392
Cellulose: Diethylaminoethyl; ion exchange chromatography, gradient salt elution, mixed solvent system, intact brain phosphoinositides, *Hendrickson and Ballou*, 1369
Flavin compounds, column chromatography, purification of liver flavokinase, *Arsenis and McCormick*, 3093
Synthesis by enzyme systems from higher plants, *Barber, Elbein, and Hassid*, 4056
Cell walls: *Bacillus subtilis;* autolysis, mechanism and possible relation to competence, *Young, Tipper, and Strominger*, PC3600
Bacterial; D-ornithine as constituent, *Duc-Nguyen and Weed*, 3372
Streptococcal; structure, characterization of alanine-containing glucosaminylmuramic acid derivative liberated by lysozyme from streptococcal glycopeptide, *Heymann, Manniello, and Barkulis*, 2981
—; —, Group A biose and triose from C-polysaccharide, *Heymann, Manniello, Zeleznick, and Barkulis*, 1656
—; —, purification and properties of phage muralysin, *Barkulis, Smith, Boltralik, and Heymann*, 4027
Cephalin: Phosphonic acid analogue, synthesis, *Baer and Stanacev*, 3209
Ceruloplasmin: Ascorbate oxidase activity, proof, *Osaki, McDermott, and Frieden*, 3570
Human; fractions separated by hy-

Ceruloplasmin—*Continued*
droxylapatite chromatography, *Deutsch and Fisher*, 3325
Physical and chemical studies, blue color, molecular oxygen, *Morell, Aisen, Blumberg, and Scheinberg*, 1042
Serum inhibitor, citric acid, *Osaki, McDermott, and Frieden*, PC364
Chloramphenicol: Amino acid polymerization systems, cell-free, differences in sensitivity, *Kućan and Lipmann*, 516
Chloride: Indole analogue binding to human serum albumin, *McMenamy*, 2835
Chloroplasts: Structure, adenosine triphosphate action, *Packer and Marchant*, 2061
Chlorpromazine: Indirect inhibition of protein synthesis *in vivo*, *Shuster and Hannam*, 3401
$\Delta^{5,7}$-Cholestadien-3β-ol: Biogenetic sequence to cholesterol, irreversibility, *Frantz, Sanghvi, and Schroepfer*, 1007
Cholesterol biosynthesis, intermediary role, *Dempsey, Seaton, Schroepfer, and Trockman*, 1381
5α-Cholestan-3β-ol: Biosynthesis, rabbit and guinea pig, *Shefer, Milch, and Mosbach*, 1731
Induction of gallstones in rabbit, identification of allodeoxycholic acid as major component, *Hofmann and Mosbach*, 2813
Δ^{7}-Cholesten-3β-ol: Biogenetic sequence to cholesterol, irreversibility, *Frantz, Sanghvi, and Schroepfer*, 1007
Cholesterol: Biogenetic sequence from Δ^{7}-cholesten-3β-ol through $\Delta^{5,7}$-cholestadien-3β-ol to, irreversibility, *Frantz, Sanghvi, and Schroepfer*, 1007
Biosynthesis, intermediary role of $\Delta^{5,7}$-cholestadien-3β-ol, *Dempsey, Seaton, Schroepfer, and Trockman*, 1381
Squalene conversion, stereochemistry, *Samuelsson and Goodman*, 98
Cholesterol-3α-^{3}H: Bile acid-biosynthetic mechanisms, *Gréen and Samuelsson*, 2804
Cholesterol-4β-^{3}H: Bile acid-biosynthetic mechanisms, *Gréen and Samuelsson*, 2804
Cholesterol esters: Formation with rat liver enzymes, *Goodman, Deykin, and Shiratori*, 1335
Cholesterol sulfate: Isolation from bovine adrenals, *Drayer, Roberts, Bandi, and Lieberman*, PC3112
Cholic acid: Transformation *in vitro*, *Corynebacterium simplex*, bile acids and steroids, *Hayakawa and Samuelsson*, 94
Choline: Acetyl-; radioactive inorganic orthophosphate incorporation into phospholipid of brain particulate preparations, stimulation, *Durell and Sodd*, 747
Di-*O*-octadecyl-L-α-glycerylphosphoryl-; synthesis, diether analogues of lecithins, *Stanacev, Baer, and Kates*, 410
Methyl group, biogenesis from intramolecularly labeled formaldehyde-$^{14}C,D_2$, *Rachele, White, and Grünewald*, 353
Oxidation, rat liver mitochondria, *Bianchi and Azzone*, 3947
Phosphatidyl-; synthesis in *Agrobacterium tumefaciens*, purification and properties of phosphatidylethanolamine *N*-methyltransferase, *Kaneshiro and Law*, 1705
Cholinesterase: *Pseudomonas fluorescens*, acetyltransferase activity, *Fitch*, 1328
Chondroitin sulfate: Biosynthesis by cell-free preparation, *Perlman, Telser, and Dorfman*, 3623
Chondroitin sulfate B: Molecular weight distribution, determination by sedimentation equilibrium, *Tanford, Marler, Jury, and Davidson*, 4034
Chondromucoprotein: Enzymatic degradation, *Gregory, Laurent, and Rodén*, 3312
Chromatin: Isolation and characterization of nuclear complexes of deoxyribonucleic acid, ribonucleic acid, and protein from embryonic and adult chicken tissues, *Dingman and Sporn*, 3483
Chromatography: Ion exchange; diethylaminoethyl cellulose, gradient salt elution, mixed solvent system, intact brain phosphoinositides, *Hendrickson and Ballou*, 1369
Chromatophores: Bacterial; interaction of photophosphorylation and electron transport systems, *Newton*, 3038
—; reversible interaction with sodium dodecyl sulfate, *Newton*, 1585
Chymotrypsin: *N*-Acetyl-L-tyrosine hydroxamic acid hydrolysis and synthesis, *Caplow and Jencks*, 1640
Chymotrypsin—*Continued*
Active site, methionine residue near, preferential oxidation, *Schachter and Dixon*, 813
Activity in crystalline trypsin preparations, inhibition, *Kostka and Carpenter*, 1799
Catalytic function, preservation by integrity of tyrosine residue, *Dube, Roholt, and Pressman*, 1809
Inactivation by cyanate, *Shaw, Stein, and Moore*, PC671
Reactions with substrates, free energy changes, *Epand and Wilson*, 4145
α-Chymotrypsin: -Catalyzed reactions of hippuric acid esters, effect of hydroxylamine on kinetics, *Epand and Wilson*, 4138
Identification of most rapidly iodinating tyrosine residue, *Dube, Roholt, and Pressman*, 3347
Trypsin and, nonspecific catalyses, acetylglycine ethyl ester hydrolysis, comparison, *Inagami and Mitsuda*, 1388
Chymotrypsin α: Reaction with chymotrypsin inhibitor from *Ascaris lumbricoides, Peanasky and Szucs*, 2525
Chymotrypsin B: Reaction with chymotrypsin inhibitor from *Ascaris lumbricoides, Peanasky and Szucs*, 2525
Chymotrypsin inhibitor: Further purification from *Ascaris lumbricoides*, reactions with chymotrypsins α and B, *Peanasky and Szucs*, 2525
Citrate: Glutamate carbon conversion to fatty acid carbon, influence of glucose, lactating rat mammary gland, *Madsen, Abraham, and Chaikoff*, 1305
Monofluoro-; enzyme-inhibitory isomer, characterization and action mechanism, *Fanshier, Gottwald, and Kun*, 425
Respiratory control, isolated heart sarcosomes, *Campello, Voss, Freire, and Bacila*, 3942
Citrate cleavage enzyme: Citryl coenzyme A as substrate, stereospecificity, *Srere and Bhaduri*, 714
Citric acid: Ceruloplasmin inhibitor in serum, *Osaki, McDermott, and Frieden*, PC364
Citrobacter freundii: Amino acid, isolation, comparison with 4-oxonorleucine, *Barry and Roark*, 1541

XUM

Citrus: *l*-Synephrine, isolation and identification, *Stewart, Newhall, and Edwards,* 930
Citryl coenzyme A: Citrate cleavage enzyme, substrate, *Srere and Bhaduri,* 714
Clostridium botulinum: Toxin, relation of tryptophan to biological activity, *Boroff and DasGupta,* 3694
Clostridium butyricum: Plasmalogens, cyclopropane aldehyde, *Goldfine,* 2130
Cobalamin: -Containing transmethylase (5-methyltetrahydrofolate-homocysteine), isolation from mammalian liver, enzymatic synthesis of methionine methyl group, *Loughlin, Elford, and Buchanan,* 2888
5′-Deoxythymidyl-; synthesis and properties, *Hogenkamp and Oikawa,* 1911
2′,5′-Dideoxyadenosyl-; synthesis and properties, *Hogenkamp and Oikawa,* 1911
Cobalt: Propionate metabolism in *Rhizobium, De Hertogh, Mayeux, and Evans,* 2446
Cobamide: 5,6-Dimethylbenzimidazolyl-; methyl transfer to homocysteine, *Weissbach, Redfield, and Dickerman,* 1942
Coenzyme(s): Riboflavin; effects of galactoflavin, *Prosky, Burch, Bejrablaya, Lowry, and Combs,* 2691
Coenzyme A: Citryl. *See* Citryl coenzyme A
Fatty acid oxidation, effect on rate, rat liver preparations, *Ontko and Jackson,* 3674
Methylmalonyl. *See* Methylmalonyl coenzyme A
Collagen: Biosynthesis, bone, *in vitro, Flanagan and Nichols,* 1261
Codfish skin; nonidentity of three α chains, *Piez,* PC4315
Dogfish shark skin, characterization, *Lewis and Piez,* 3336
trans-Hydroxyproline-^{14}C, proline-^{14}C conversion to, chick embryo, *Kaplan, Witkop, and Udenfriend,* 2559
Collagen-like protein: Plasma; containing hydroxyproline, assay procedure, *LeRoy, Kaplan, Udenfriend, and Sjoerdsma,* 3350
Computers: Analogue; enzyme kinetics, *Walter and Morales,* 1277
Glycolytic pathway, ascites cells, detailed model, *Garfinkel and Hess,* 971
Copper: Cytochrome oxidase component, oxidation-reduction, kinetic studies, rapid freezing technique, *Beinert and Palmer,* 1221
-Deficient swine, cardiovascular studies, mucopolysaccharide composition of aorta and cartilage, *Linker, Coulson, and Carnes,* 1690
Heart muscle preparation and heart mitochondria, *King, Nickel, and Jensen,* 1989
Corticosteroids: Effect on leakage of enzymes from dispersed rat liver cells, *Takeda, Ichihara, Tanioka, and Inoue,* 3590
Corticosteroidogenesis: Adrenal homogenates, stimulation by serum protein, *Makoff, Roberts, and Fowler,* 4124
Cortisol: Glucose metabolism, lymphoid tissue, *Blecher,* 1299
Hexokinase and phosphofructokinase activity in heart muscle, *Regen, Davis, Morgan, and Park,* 43
Metabolism, effects of experimental diabetes, *Gold and Garren,* 2796
Cortisone: Glucose 6-phosphatase and fructose 1,6-diphosphatase synthesis, inhibition by actinomycin and puromycin, *Weber and Singhal,* 521
Corynebacterium simplex: Cholic acid, transformation *in vitro,* bile acids and steroids, *Hayakawa and Samuelsson,* 94
Cupric ions: Binding sites in myoglobin derivatives and serum albumin, comparison, *Breslow,* 3252
Cyanate: Chymotrypsin inactivation, *Shaw, Stein, and Moore,* PC671
Reversible reaction with sulfhydryl groups, determination of NH_2-terminal cysteine and cystine in proteins, *Stark,* 1411
Cyanide: Carbonyl. *See* Carbonyl cyanide
Ferri-. *See* Ferricyanide
Reaction with bovine serum albumin, *Catsimpoolas and Wood,* 4132
Cyclopropane aldehyde: *Clostridium butyricum* plasmalogens, *Goldfine,* 2130
Cystathionine: Cleavage enzymes, *Neurospora, Flavin and Slaughter,* 2212
γ-Cleavage enzyme, *Neurospora,* purification and properties, *Flavin and Segal,* 2220
Cysteine(s): *S*-Alkyl-L-; L-cysteine sulfoxide lyase, partially competitive inhibition, *Schwimmer, Ryan, and Wong,* 777
Aryl-; activation, incorporation into ribosomal protein, *Bucovaz and Wood,* 1151
NH_2-terminal; determination in proteins, *Stark,* 1411
Cysteine sulfoxide lyase: L-; specificity, partially competitive inhibition by *S*-alkyl-L-cysteines, *Schwimmer, Ryan, and Wong,* 777
Cystine: Color reaction, fully combined form, oxygen-sensitive reactions of proteins and peptides, *Gustus,* 115
L-; heat capacity and entropy, L-methionine and, transition of L-methionine near 305.5° K, *Hutchens, Cole, and Stout,* 591
NH_2-terminal; determination in proteins, *Stark,* 1411
Cytidine diphosphate reductase: Novikoff hepatoma, enzymatic synthesis of deoxyribonucleotides, *Moore and Reichard,* 3453
Cytochrome(s): Heart muscle preparation and heart mitochondria, *King, Nickel, and Jensen,* 1989
Cytochrome *a*: -Borohydride reaction, effect of pH and protein-depolymerizing reagents, studies on electron transport system, *Tzagoloff and Wharton,* 582
Chemical distinction from cytochrome a_3, *Morrison and Horie,* 1432
Preparation free of cytochrome a_3, *Horie and Morrison,* 1438
Cytochrome a_3: Chemical distinction from cytochrome *a*, *Morrison and Horie,* 1432
Cytochrome b_1: Crystalline; *Escherichia coli, Deeb and Hager,* 1024
Cytochrome b_2: Yeast; kinetic investigations, dehydrogenation of L-lactate, ferricyanide as electron acceptor, *Morton and Sturtevant,* 1614
Cytochrome b_5 reductase: Reversible direct hydrogen transfer from reduced pyridine nucleotides, *Strittmatter,* 3043
Cytochrome b-c_1 particle: Preparation and properties, sequential fragmentation of succinate oxidase, *Takemori and King,* 3546
Soluble succinate dehydrogenase and, reconstitution of succinate-cytochrome *c* reductase from, *King and Takemori,* 3559

Cytochrome *c*: Apoprotein; recombination with protoporphyrinogen, *Sano and Tanaka*, PC3109
Comparative biochemistry, *Yamanaka and Okunuki*, 1813
Ferro-. *See* Ferrocytochrome *c*
Soluble; mechanism of stimulation of reduced diphosphopyridine nucleotide oxidase, heart muscle particles and mitochondria, *Camerino and Smith*, 2345
Cytochrome *c* oxidase: Components, chemical distinction between cytochromes *a* and a_3, *Morrison and Horie*, 1432
—, cytochrome *a* preparation free of cytochrome a_3, *Horie and Morrison*, 1438
Cytochrome oxidase: Components, spectra, properties, *Gibson and Greenwood*, 586
Copper component, oxidation-reduction, kinetic studies, rapid freezing technique, *Beinert and Palmer*, 1221
Further purification, *Wainio*, 1402
Inhibition of activity by polylysine and lysine copolymers, effects of polar and apolar residues, *Person, Zipper, Fine, and Mora*, 4159
Near infrared absorption spectrum, electron transfer system, *Wharton and Tzagoloff*, 2036
Cytochrome system: Components, macroion interactions involving, influences of polar and apolar residues on polylysine and lysine copolymer inhibition of cytochrome oxidase activity, *Person, Zipper, Fine, and Mora*, 4159

D

Deaminase: Deoxycytidylate. *See* Deoxycytidylate deaminase
Decanoate: ω-Oxidation, products, *Kusunose, Kusunose, and Coon*, 1374
Decarboxylase: α-Hydroxy acid. *See* α-Hydroxy acid decarboxylase
β-Decarboxylase: Aspartate. *See* Aspartate β-decarboxylase
Dehydrase: β-Hydroxydecanoyl coenzyme A. *See* β-Hydroxydecanoyl coenzyme A dehydrase
6-Phosphogluconic. *See* 6-Phosphogluconic dehydrase
Serine. *See* Serine dehydrase
Threonine. *See* Threonine dehydrase
Dehydrogenase(s): Alcohol. *See* Alcohol dehydrogenase
Dehydrogenases—*Continued*
Electron transport; five primary, differential synthesis, *Hemophilus parainfluenzae, White*, 2055
Hexitol. *See* Hexitol dehydrogenases
Glucose. *See* Glucose dehydrogenase
L-Glutamate. *See* Glutamate dehydrogenase
D-α-Hydroxy acid. *See* α-Hydroxy acid dehydrogenase
Inosine 5′-phosphate. *See* Inosine 5′-phosphate dehydrogenase
Isocitric. *See* Isocitric dehydrogenase
Lactate. *See* Lactate dehydrogenase
Lactic. *See* Lactic dehydrogenase
Lipoyl. *See* Lipoyl dehydrogenase
Malic. *See* Malic dehydrogenase
5,10-Methylenetetrahydrofolic. *See* 5,10-Methylenetetrahydrofolic dehydrogenase
3-Phosphoglyceraldehyde. *See* 3-Phosphoglyceraldehyde dehydrogenase
Reduced diphosphopyridine nucleotide. *See under* Diphosphopyridine nucleotide dehydrogenase
Reduced nicotinamide adenine dinucleotide. *See under* Nicotinamide adenine dinucleotide dehydrogenase
Sarcosine. *See* Sarcosine dehydrogenase
Succinate. *See* Succinate dehydrogenase
L-Threonic acid. *See* Threonic acid dehydrogenase
Triosephosphate. *See* Triosephosphate dehydrogenase
Xanthine. *See* Xanthine dehydrogenase
Dehydrogenase-isomerase: 3β-Hydroxysteroid. *See* 3β-Hydroxysteroid dehydrogenase-isomerase
Deoxycholic acid: Allo-; major component of gallstones induced in rabbit by 5α-cholestan-3β-ol, *Hofmann and Mosbach*, 2813
Deoxycytidylate deaminase: Chick embryo extracts, purification and properties, *Maley and Maley*, 1168
Deoxycytidylate hydroxymethylase: Biosynthesis *de novo*, virus-induced acquisition of metabolic function, *Mathews, Brown, and Cohen*, 2957
Deoxyribonuclease(s): *Escherichia coli;* changes in levels in response to alterations of physiological state, *Shortman and Lehman*, 2964
—; exonuclease activity of purified deoxyribonucleic acid polymerase preparations, *Lehman and Richardson*, 233
Escherichia coli; specificity of exonuclease I (phosphodiesterase), *Lehman and Nussbaum*, 2628
Induction by infection with bacteriophage T2, *Oleson and Koerner*, 2935
Streptococcus pyogenes, Winter and Bernheimer, 215
Deoxyribonuclease I: Activation, interdependence of variables, *Shack and Bynum*, 3843
Deoxyribonucleate: Partially denatured; resolution into native and denatured components, *Shack and Bynum*, 2602
Deoxyribonucleic acid: -Associated ribonucleic acid, *Drosophila melanogaster, Mead*, 550
-Directed synthesis of complementary cytoplasmic ribonucleic acid components, enzymatic synthesis of ribonucleic acid, *Robinson, Hsu, Fox, and Weiss*, 2944
Enzymatic synthesis, purification and properties of *Escherichia coli* deoxyribonucleic acid polymerase, *Richardson, Schildkraut, Aposhian, and Kornberg*, 222
—, purification and properties of polymerase from *Bacillus subtilis, Okazaki and Kornberg*, 259
Infectious; T1 and λ bacteriophage, *Brody, Coleman, Mackal, Werninghaus, and Evans*, 285
Nuclear complexes with ribonucleic acid and protein, embryonic and adult chicken tissues, studies on chromatin, *Dingman and Sporn*, 3483
-Primed ribonucleic acid polymerase reaction, enzymatic synthesis of ribonucleic acid, *Fox and Weiss*, 175
Radioisotope incorporation *in vivo*, nuclei from regenerating rat liver, *Niehaus and Barnum*, 1198
Ribonucleic acid and, enzymatic methylation, properties of deoxyribonucleic acid methylation reaction, *Gold and Hurwitz*, 3866
—, —, properties of soluble ribonucleic acid-methylating enzymes, *Hurwitz, Gold, and Anders*, 3474
—, —, purification and properties of deoxyribonucleic acid-methylating

Deoxyribonucleic acid—*Continued*
activity of *Escherichia coli*, *Gold and Hurwitz*, 3858
Ribonucleic acid and, enzymatic methylation, purification of soluble ribonucleic acid-methylating enzymes, *Hurwitz, Gold, and Anders*, 3462
Synthesis, effect of puromycin, molecular mechanism of liver regeneration, *Gottlieb, Fausto, and Van Lancker*, 555
—, enzymes, adenovirus- and vaccinia virus-infected cells, *Green, Piña, and Chagoya*, 1188
—, mammalian enzymes, incorporation of doexynucleoside 5′-triphosphates by partially purified enzyme from regenerating rat liver, *Mantsavinos*, 3431
—, rat liver, Zn^{++} requirement, *Fujioka and Lieberman*, 1164
Deoxyribonucleic acid exonuclease: Associated with bacteriophage 434, purification and properties, *Korn and Weissbach*, 3849
Deoxyribonucleic acid phosphatase-exonuclease: *Escherichia coli;* characterization of exonuclease activity, *Richardson, Lehman, and Kornberg*, 251
—; purification, characterization of phosphatase activity, *Richardson and Kornberg*, 242
Deoxyribonucleic acid polymerase: *Escherichia coli;* purification and properties, enzymatic synthesis of deoxyribonucleic acid, *Richardson, Schildkraut, Aposhian, and Kornberg*, 222
Escherichia coli K12λ; effect of lysogenic induction with mitomycin C, *Pricer and Weissbach*, 2607
Exonuclease activity, purified preparations, deoxyribonucleases of *Escherichia coli, Lehman and Richardson*, 233
Molecular weight and sedimentation coefficient, *Baldwin*, 231
Deoxynucleoside 5′-triphosphates: Incorporation into deoxyribonucleic acid by partially purified enzyme from regenerating rat liver, *Mantsavinos*, 3431
Deoxyribonucleotides: Enzymatic synthesis, cytidine diphosphate reductase system from Novikoff hepatoma, *Moore and Reichard*, 3453
—, isolation and characterization of thioredoxin, hydrogen donor from *Escherichia coli* B, *Laurent, Moore, and Reichard*, 3436
Deoxyribonucleotides—*Continued*
Enzymatic synthesis, purification and properties of thioredoxin reductase from *Escherichia coli* B, *Moore, Reichard, and Thelander*, 3445
Deoxyribopolynucleotides: Terminal hydroxyl groups, selective acetylation, *Stuart and Khorana*, 3885
Deoxyribose phosphate aldolase: Rat liver, *Roscoe and Nelson*, 8
Deoxyribosyl: Transfer, nucleoside: pyrimidine deoxyribosyltransferase activity of three partially purified thymidine phosphorylases, *Zimmerman*, 2622
—, thymidine phosphorylase and nucleoside deoxyribosyltransferase, normal and malignant tissues, *Zimmerman and Seidenberg*, 2618
Deoxyribosyltransferase: Nucleoside. *See* Nucleoside deoxyribosyltransferase
Nucleoside:pyrimidine. *See* Nucleoside:pyrimidine deoxyribosyltransferase
Deoxythymidine kinase: *Escherichia coli;* kinetics and feedback control, *Okazaki and Kornberg*, 275
—; purification and properties, *Okazaki and Kornberg*, 269
Depolymerase: Galactomannan. *See* Galactomannan depolymerase
Detergents: Anionic; protection against denaturation of serum albumin, mechanism, *Markus, Love, and Wissler*, 3687
Deuterium: -Hydrogen exchange, analysis, pH-dependent transitions, bovine plasma albumin, *Benson, Hallaway, and Lumry*, 122
Dexamethasone: Fructose and glucose metabolism, adipose tissue, *Fain*, 958
Diabetes: Alloxan; hepatic uridine diphosphate glucose-glycogen glucosyltransferase synthesis, insulin administration, *Steiner and King*, 1292
—; hexokinase and phosphofructokinase activity in heart muscle, *Regen, Davis, Morgan, and Park*, 43
Distribution labeling of human blood glucose by DL-lactate-2-^{14}C or pyruvate-2-^{14}C, *Shreeve and De Meutter*, 729
Experimental; acute insulin insufficiency, ^{14}C-glucose formation from labeled substrates, *Wagle and Ashmore*, 1289
Diabetes—*Continued*
Experimental; effect on steroid metabolism, alterations in androst-4-ene-3,17-dione and cortisol metabolism, *Gold and Garren*, 2796
—; free fatty acid mobilization, *Tarrant, Mahler, and Ashmore*, 1714
Fatty acid biosynthesis, adipose tissue, *Benjamin and Gellhorn*, 64
Metabolism, carbohydrate utilization, high energy phosphate formation, heart homogenates, normal and alloxan-diabetic rats, *Haugaard and Haugaard*, 705
Diamine-α-ketoglutarate transaminase: *Escherichia coli*, purification and properties, *Kim*, 783
Dictyostelium discoideum: Enzymes, conversion of long chain saturated fatty acids to α,β-unsaturated, β,γ-unsaturated, and β-hydroxy derivatives, *Davidoff and Korn*, 2496
Diet: Induction of threonine dehydrase and ornithine δ-transaminase, carbohydrate repression, rat liver, *Peraino and Pitot*, 4308
Natural components, regulation of rat liver enzymes, *Pérez, Clark-Turri, Rabajille, and Niemeyer*, 2420
Dihydrofolate reductase: Amethopterin-resistant *Diplococcus pneumoniae*, genetic modification of structure and amount, *Sirotnak, Donati, and Hutchison*, 4298
—, genotypically distinguishable, *Sirotnak, Donati, and Hutchison*, 2677
Inhibition by folate antagonists, *Bertino, Booth, Bieber, Cashmore, and Sartorelli*, 479
Dihydrofolic acid: Enzymatic formation from dihydropteroic acid, *Griffin and Brown*, 310
Enzymatic synthesis from guanine and ribose compounds, *Reynolds and Brown*, 317
Dihydrofolic reductase: Activation by organic mercurials, *Kaufman*, PC669
Dinucleotide: Nicotinamide adenine. *See* Nicotinamide adenine dinucleotide
Diphosphatase: Fructose 1,6-. *See* Fructose 1,6-diphosphatase
Diphosphokinase: Nucleoside. *See* Nucleoside triphosphate - nucleoside diphosphate transphosphorylase

Diphosphopyridine nucleotide: Content and action in triosephosphate dehydrogenase, *Murdock and Koeppe*, 1983
Reduced; oxidation, initial lag, hydrogen transfer between reduced diphosphopyridine nucleotide dehydrogenase and respiratory chain, *Minakami, Schindler, and Estabrook*, 2049
—; —, *Tetrahymena pyriformis* preparations, *Rahat, Judd, and van Eys*, 3537
Diphosphopyridine nucleotide dehydrogenase: Reduced; hydrogen transfer, respiratory chain, effect of sulfhydryl inhibitors and phospholipase, *Minakami, Schindler, and Estabrook*, 2042
—; —, —, initial lag in oxidation of reduced diphosphopyridine nucleotide, *Minakami, Schindler, and Estabrook*, 2049
Diphosphopyridine nucleotide oxidase: Reduced; heart muscle particles and mitochondria, mechanism of stimulation by soluble cytochrome *c*, *Camerino and Smith*, 2345
Diplococcus pneumoniae: Amethopterin-resistant; distinct genotype, dihydrofolate reductase in, *Sirotnak, Donati, and Hutchison*, 2677
—; genetic modification of structure and amount of dihydrofolate reductase, *Sirotnak, Donati, and Hutchison*, 4298
Disulfide: Interchange, reactivation of reduced ribonuclease, *Givol, Goldberger, and Anfinsen*, PC3114
-Sulfhydryl interchange, myosin A, *Stracher*, 1118
Disulfide bonds: Insulin; electrolytic reduction, *Markus*, 4163
Ribonuclease and lysozyme, interaction with phosphorothioate, *Neumann, Goldberger, and Sela*, 1536
Drosophila melanogaster: Deoxyribonucleic acid-associated ribonucleic acid, *Mead*, 550

E

Ehrlich cell: Relations in transport of β-alanine and α-amino acids, *Christensen*, 3584
Electron paramagnetic resonance: Distribution of iron and of component giving signal at g = 1.90 in electron transfer system, *Rieske, Zaugg, and Hansen*, 3023
Electron paramagnetic resonance—*Continued*
Electron transfer sequence in xanthine oxidase, direct studies, kinetic studies employing rapid freezing, *Bray, Palmer, and Beinert*, 2667
—, —, techniques and description of spectra, *Palmer, Bray, and Beinert*, 2657
Properties of new oxidation-reduction component of respiratory chain, *Reiske, Hansen, and Zaugg*, 3017
Electron transfer: Differential inhibition, various electron acceptors, hepatic aldehyde oxidase, *Rajagopalan and Handler*, 2022
Sequence, xanthine oxidase, direct studies by electron paramagnetic resonance spectroscopy, kinetic studies employing rapid freezing, *Bray, Palmer, and Beinert*, 2667
—, —, —, techniques and description of spectra, *Palmer, Bray, and Beinert*, 2657
Electron transfer system: Cytochrome oxidase, near infrared absorption band, *Wharton and Tzagoloff*, 2036
Distribution of iron and of component giving electron paramagnetic resonance signal at g = 1.90 in subfractions of Complex III, *Reiske, Zaugg, and Hansen*, 3023
Properties of new oxidation-reduction component of respiratory chain studied by electron paramagnetic resonance spectroscopy, *Reiske, Hansen, and Zaugg*, 3017
Electron transport dehydrogenases: Five primary, differential synthesis, *Hemophilus parainfluenzae, White*, 2055
Electron transport enzymes: Localization, *Hemophilus parainfluenzae*, nature of respiratory chain system, *White and Smith*, 3956
Electron transport system: Cytochrome *a*-borohydride reaction, effect of pH and protein-depolymerizing reagents, *Tzagoloff and Wharton*, 582
Interaction with photophosphorylation in bacterial chromatophores, *Newton*, 3038
***trans*-Eliminase:** Pectin. *See* Pectin *trans*-eliminase
Energy: Free; changes in reactions of chymotrypsin with substrates, *Epand and Wilson*, 4145
Energy—*Continued*
L-Serine formation, *Hutchens, Cole, and Stout*, 4194
Utilization, perfused rat heart, glycolysis adjustment, effect of ionic composition on phosphofructokinase activity, *Regen, Young, Davis, Jack, and Park*, 381
Enolase: Bakers' and brewers' yeast, purification yielding single active component, *Westhead and McLain*, 2464
Enthalpy: L-Serine formation, *Hutchens, Cole, and Stout*, 4194
Entropy(ies): L-Cystine and L-methionine, transition of L-methionine near 305.5° K, *Hutchens, Cole, and Stout*, 591
L-Serine formation, *Hutchens, Cole, and Stout*, 4194
Enzyme(s): Basis of tyrosyluria in rats fed tyrosine, *Knox, Linder, Lynch, and Moore*, 3821
Biotin activation, biotinyladenylate formation, *Christner, Schlesinger, and Coon*, 3997
Catechol degradation, bacteria, *Dagley and Gibson*, PC1284
Chondromucoprotein degradation, *Gregory, Laurent, and Rodén*, 3312
Citrate cleavage, citryl coenzyme A as substrate, stereospecificity, *Srere and Bhaduri*, 714
Conversion of essential fatty acids to prostaglandins, *Bergström, Danielsson, Klenberg, and Samuelsson*, PC4006
Conversion of long chain saturated fatty acids to α,β-unsaturated, β,γ-unsaturated, and β-hydroxy derivatives, *Dictyostelium discoideum, Davidoff and Korn*, 2496
Cystathionine cleavage, *Neurospora, Flavin and Slaughter*, 2212
Cystathionine γ-cleavage; *Neurospora*, purification and properties, *Flavin and Segal*, 2220
Deoxyribonucleic acid-methylating, *Escherichia coli*, purification and properties, enzymatic methylation of ribonucleic acid and deoxyribonucleic acid, *Gold and Hurwitz*, 3858
Deoxyribonucleic acid synthesis, incorporation of deoxynucleoside 5′-triphosphates by partially purified enzyme from regenerating rat liver, *Mantsavinos*, 3431
—, vaccinia virus- and adenovirus-

Enzyme(s)—*Continued*
infected cells, *Green, Piña, and Chagoya,* 1188
Deoxyribonucleotide synthesis, cytidine diphosphate reductase from Novikoff hepatoma, *Moore and Reichard,* 3453
—, isolation and characterization of thioredoxin, hydrogen donor from *Escherichia coli* B, *Laurent, Moore, and Reichard,* 3436
—, purification and properties of thioredoxin reductase from *Escherichia coli* B, *Moore, Reichard, and Thelander,* 3445
Dihydropteroic acid synthesis, characteristics of system, *Weisman and Brown,* 326
3-Enolpyruvylshikimate 5-phosphate synthesis, *Levin and Sprinson,* 1142
Formation of cholesterol esters, rat liver, *Goodman, Deykin, and Shiratori,* 1335
Glucagon-degrading, beef liver, properties, *Kakiuchi and Tomizawa,* 2160
L-Glutamic acid-adding, purification and properties, peptide synthesis in bacterial uridine nucleotides, *Nathenson, Strominger, and Ito,* 1773
Glutarate metabolism in *Pseudomonas, Numa, Ishimura, Nakazawa, Okazaki, and Hayaishi,* 3915
Glycogen metabolism, fetal decapitation, *Jacquot and Kretchmer,* 1301
Glycolipid synthesis, bacteria, *Lennarz,* PC3110
Histidine operon, sedimentation properties, *Whitfield, Smith, and Martin,* 3288
Homeostasis, role, actinomycin and puromycin inhibition of cortisone-induced synthesis of hepatic glucose 6-phosphatase and fructose 1,6-diphosphatase, *Weber and Singhal,* 521
Hydrogen and electron transport, *Hemophilus parainfluenzae,* localization, nature of respiratory chain system, *White and Smith,* 3956
Induction and repression, carbohydrate repression of dietary and hormonal induction of threonine dehydrase and ornithine δ-transaminase, rat liver, *Peraino and Pitot,* 4308
Enzyme(s)—*Continued*
Induction and repression, induction of threonine dehydrase and ornithine δ-transaminase by oral intubation of casein hydrolysate, rat liver, *Pitot and Peraino,* 1783
Kinetics, analogue computer investigation, *Walter and Morales,* 1277
—, treatment of data, effect of modifiers on kinetic parameters of single substrate enzymes, *Frieden,* 3522
Lactose-synthesizing, soluble, bovine milk, *Babad and Hassid,* PC946
Leakage from dispersed rat liver cells, effect of corticosteroids, *Takeda, Ichihara, Tanioka, and Inoue,* 3590
L-Lysine-adding, purification and properties, peptide synthesis in bacterial uridine nucleotides, *Ito and Strominger,* 210
Mevalonic and palmitic acid biosynthesis, bound intermediates, *Brodie, Wasson, and Porter,* 1346
Orotic acid-decarboxylating, calf thymus, purification and properties, *Kasbekar, Nagabhushanam, and Greenberg,* 4245
Particulate and soluble, *Salmonella,* catalysis of glucose and galactose incorporation, bacterial lipopolysaccharide biosynthesis, *Rothfield, Osborn, and Horecker,* 2788
Phospho-; isomerization, phosphoglucomutase pathway, *Ray and Roscelli,* 3935
5′-Phosphoribosylimidazoleacetic acid synthesis, *Crowley,* 2593
Phosphorylation of D-glucose with acetyl phosphate, *Kamel and Anderson,* PC3607
Proteolytic; latex of *Ficus carica* var. Kadota, properties, *Kramer and Whitaker,* 2178
—; separation of enzymes of *Ficus carica* and *Ficus glabrata* latices, *Sgarbieri, Gupte, Kramer, and Whitaker,* 2170
Regulation by natural components of diet, rat liver, *Pérez, Clark-Turri, Rabajille, and Niemeyer,* 2420
Repression, regulation of nicotinamide adenine dinucleotide biosynthesis, *Bacillus subtilis, Gholson and Kori,* PC2399
Riboflavin, effects of galactoflavin, *Prosky, Burch, Bejrablaya, Lowry, and Combs,* 2691
Enzyme(s)—*Continued*
Serine biosynthesis, cultured human cells, *Pizer,* 4219
Single substrate, effect of modifiers on kinetic parameters, *Frieden,* 3522
Soluble ribonucleic acid-methylating, properties, enzymatic methylation of ribonucleic acid and deoxyribonucleic acid, *Hurwitz, Gold, and Anders,* 3474
—, purification, enzymatic methylation of ribonucleic acid and deoxyribonucleic acid, *Hurwitz, Gold, and Anders,* 3462
Synthesis *de novo,* glucocorticoid stimulation of gluconeogenesis, *Ray, Foster, and Lardy,* 3396
Thymidine diphosphate 4-acetamido-4,6-dideoxyhexose synthesis, *Escherichia coli, Matsuhashi and Strominger,* 2454
Tripeptide synthesis, intermediate formation of dipeptide-phosphate anhydride, *Nishimura, Dodd, and Meister,* 2553
Zinc, high specific activity, neutral proteinase of *Bacillus subtilis, McConn, Tsuru, and Yasunobu,* 3706
Enzyme complexes: Anomalous rotatory dispersion, mechanism of coenzyme binding to liver alcohol dehydrogenase, *Li and Vallee,* 792
Enzyme inhibitors: Specific; characterization and action mechanism of enzyme-inhibitory isomer of monofluorocitrate, *Fanshier, Gottwald, and Kun,* 425
—; enzyme-regulatory mechanisms of entry of glutamic acid into metabolic pathways in kidney, *Kun, Ayling, and Baltimore,* 2896
—; synthesis and enzyme-inhibitory properties of α-monofluoroglutaric acid, *Gottwald, Ayling, and Kun,* 435
Enzyme system(s): Higher plants; cellulose synthesis, *Barber, Elbein, and Hassid,* 4056
Microsomal; reactivation of reduced ribonuclease and lysozyme, purification and properties, *Goldberger, Epstein, and Anfinsen,* 1406
Pteridine-requiring, oxidation of glyceryl ethers, *Tietz, Lindberg, and Kennedy,* 4081
Reconstituted, nitrite reduction, light

Enzyme system(s)—*Continued*
and dark, *Paneque, Ramirez, Del Campo, and Losada,* 1737
Respiratory chain, reconstitution, reconstitution of succinate-cytochrome *c* reductase from soluble succinate dehydrogenase and cytochrome b-c_1 particle, *King and Takemori,* 3559
—, —, sequential fragmentation of succinate oxidase, preparation and properties of succinate-cytochrome *c* reductase and cytochrome b-c_1 particle, *Takemori and King,* 3546
Soluble; inositol biosynthesis, *Chen and Charalampous,* 1905
Epimerase: Hydroxyproline 2-. *See* Hydroxyproline 2-epimerase
Uridine diphosphogalactose. *See* Uridine diphosphogalactose 4-epimerase
Epinephrine: Glucose catabolism, major pathways, adipose tissue metabolism, *Flatt and Ball,* 675
Glycolysis in frog sartorius muscle, *Karpatkin, Helmreich, and Cori,* 3139
Metabolic effects, isolated perfused heart, dissociation of glycogenolytic from metabolic stimulatory effect, *Williamson,* 2721
Phosphofructokinase activity in frog skeletal muscle, *Özand and Narahara,* 3146
-Sensitive lipolytic activity, adipose tissue, activation by adenosine 3′,5′-phosphate, *Rizack,* 392
Epitestosterone: Isolation from human urine, *Korenman, Wilson, and Lipsett,* 1004
Ergosomes: Rat liver; breakdown and reassembly after administration of ethionine or puromycin, *Villa-Trevino, Farber, Staehlin, Wettstein, and Noll,* 3826
Erythrocyte(s): Adenosine triphosphate-dependent sodium and potassium transport, stoichiometry and localization. *Sen and Post,* 345
Avian; hemoglobin synthesis, *Hammel and Bessman,* 2228
Human; carbonic anhydrases, preparation and properties, *Rickli, Ghazanfar, Gibbons, and Edsall,* 1065
—; folic acid precursors, purification and properties, *Iwai, Luttner, and Toennies,* 2365
—; isolation of sialic acid 9-phosphatase, *Jourdian, Swanson, Watson, and Roseman,* PC2714
Human; role of glucose 6-phosphate in glucose metabolism, *Rose and O'Connell,* 12
—; membrane, amino acid migration, *Winter and Christensen,* 872
Thiols, *N*-ethylmaleimide reaction with intact erythrocytes, *Morell, Ayers, Greenwalt, and Hoffman,* 2696
Erythromycin: C_{21} branched chain lactone, precursors, comparison of 2-methylmalonate and propionate, antibiotic glycosides, *Friedman, Kaneda, and Corcoran,* 2386
Escherichia coli: Active transport of L-α-glycerophosphate, *Hayashi, Koch, and Lin,* 3098
Alkaline phosphatase, transphosphorylation, *Wilson, Dayan, and Cyr,* 4182
B; new cyclic phosphodiesterase with 3′-nucleotidase activity, purification and properties, *Anraku,* 3412
—; —, substrate specificity and mode of action, *Anraku,* 3420
—; purine - requiring mutants, induction of inosine 5′-phosphate dehydrogenase and xanthosine 5′-phosphate aminase by ribosyl-4-amino - 5 - imidazolecarboxamide, *Kuramitsu, Udaka, and Moyed,* 3425
—; thioredoxin, hydrogen donor, isolation and characterization, enzymatic synthesis of deoxyribonucleotides, *Laurent, Moore, and Reichard,* 3436
—; thioredoxin reductase, purification and properties, enzymatic synthesis of deoxyribonucleotides, *Moore, Reichard, and Thelander,* 3445
Conversion of cells to spheroplasts, release of ribonuclease into medium, *Neu and Heppel,* 3893
Crystalline cytochrome b_1, *Deeb and Hager,* 1024
Deoxyribonucleases, changes in enzyme levels in response to alterations in physiological state, *Shortman and Lehman,* 2964
—, exonuclease activity of purified deoxyribonucleic acid polymerase preparations, *Lehman and Richardson,* 233
—, specificity of exonuclease I (phosphodiesterase), *Lehman and Nussbaum,* 2628
Deoxyribonucleic acid-methylating activity, purification and properties, enzymatic methylation of ribonucleic acid and deoxyribonucleic acid, *Gold and Hurwitz,* 3858
Deoxyribonucleic acid phosphatase-exonuclease, characterization of exonuclease activity, *Richardson, Lehman, and Kornberg,* 251
—, purification, characterization of phosphatase activity, *Richardson and Kornberg,* 242
Deoxyribonucleic acid polymerase, purification and properties, enzymatic synthesis of deoxyribonucleic acid, *Richardson, Schildkraut, Aposhian, and Kornberg,* 222
Deoxythymidine kinase, *Okazaki and Kornberg,* 269
—, kinetics and feedback control, *Okazaki and Kornberg,* 275
Diamine-α-ketoglutarate transaminase, purification and properties, *Kim,* 783
Dissimilation of glycerol and L-α-glycerophosphate, control, *Koch, Hayashi, and Lin,* 3106
Fatty acid synthetase and β-hydroxydecanoyl coenzyme A dehydrase from, *Norris, Matsumura, and Bloch,* 3653
Galactose operon enzymes, purification and characterization of uridine diphosphogalactose 4-epimerase, *Wilson and Hogness,* 2469
Galactose transport, mechanism underlying retention of intracellular galactose, *Rotman and Radojkovic,* 3153
Glyoxylate carboligase, flavoprotein, *Gupta and Vennesland,* 3787
K12λ; deoxyribonucleic acid polymerase, effect of lysogenic induction with mitomycin C, *Pricer and Weissbach,* 2607
K12 W-6; ribosomal ribonucleic acid, methylated bases, *Starr and Fefferman,* 3457
Mutant; altered aminoacyl ribonucleic acid synthetase, *Fangman and Neidhardt,* 1839
—; —, protein and ribonucleic acid synthesis, *Fangman and Neidhardt,* 1844

Escherichia coli—*Continued*
Phosphoglucomutase, purification and properties, *Joshi and Handler*, 2741
Phospholipid biosynthesis, *Kanfer and Kennedy*, 1720
Phosphoserine, bound, new form, *Rafter*, 1044
Ribonuclease II, purification and properties, *Spahr*, 3716
Ribonucleic acid polymerase, homopolymer formation, *Stevens*, 204
—, purification, ribonucleic acid formation, *Stevens and Henry*, 196
Ribosomes, single β-D-galactosidase centers, distribution and activity, *Lederberg, Rotman, and Lederberg*, 54
Thymidine diphosphate 4-acetamido-4,6-dideoxyhexoses, enzymatic synthesis, *Matsuhashi and Strominger*, 2454
Thymidine phosphorylase, substrate specificity and induction, *Razzell and Casshyap*, 1789
Estradiol-17α: Conjugate with *N*-acetylglucosamine, isolation from rabbit urine, *Layne, Sheth, and Kirdani*, 3221
Estradiol-17β: Effect on activity of carbamoyl phosphate:L-aspartate carbamoyltransferase, uteri of immature rats, *Tremblay and Thayer*, 3321
Estradiol-17β 16-^{14}C: 16-Keto-; reduction by mammalian blood, *Trachewsky and Hobkirk*, 3683
Estrogen: -Dependent pyridine nucleotide transhydrogenase, human myometrium, *Abe, Hagerman, and Villee*, 414
Uterine ribonucleic acid polymerase activity, early effects, *Gorski*, 889
Ethanol: Metabolism, intact rat, *Russell and Van Bruggen*, 719
Ethanolamine: Metabolism, ethanolamine oxidase, *Narrod and Jakoby*, 2189
Ethanolamine oxidase: Ethanolamine metabolism, *Narrod and Jakoby*, 2189
Ethers: Glyceryl. *See* Glyceryl ethers
Ethionine: Rat liver ergosomes, breakdown and reassembly, *Villa-Trevino, Farber, Staehlin, Wettstein, and Noll*, 3826
Ethylene: Labeled; metabolism in avocado, benzene and toluene from ethylene-^{14}C, benzene from ethylene-^{3}H, *Jansen*, 1664
Euglena gracilis: Lipid metabolism, *Hulanicka, Erwin, and Bloch*, 2778
Uridine diphosphate glucose-β-1,3-glucan β-3-glucosyltransferase, *Marechal and Goldemberg*, 3163
Exonuclease: Deoxyribonucleic acid. *See* Deoxyribonucleic acid exonuclease
Deoxyribonucleic acid phosphatase-exonuclease, *Richardson, Lehman, and Kornberg*, 251
Deoxyribonucleic acid polymerase, purified preparations, deoxyribonucleases of *Escherichia coli*, *Lehman and Richardson*, 233
Exonuclease I: Specificity, *Escherichia coli* deoxyribonucleases, *Lehman and Nussbaum*, 2628

F

Farnesyl pyrophosphate: Squalene biosynthesis, stereochemistry, *Samuelsson and Goodman*, 98
Fat(s): Metabolism in higher plants, properties of soluble fatty acid synthetase from avocado mesocarp, *Overath and Stumpf*, 4103
Unsaturated; effects of nutritional deficiency on rat liver mitochondria, respiratory control and adenosine triphosphate-inorganic orthophosphate exchange activity, *Ito and Johnson*, 3201
Fat cells: Isolated; metabolism, effects of hormones on glucose metabolism and lipolysis, *Rodbell*, 375
Rat adipose tissue, lipoprotein lipase localization, *Rodbell*, 753
Fatty acid(s): Activation by guanosine triphosphate-specific thiokinase, liver mitochondria, *Rossi and Gibson*, 1694
Amino acid carbon incorporation, lactating rat mammary gland slices, effect of glucose, *Abraham, Madsen, and Chaikoff*, 855
Biosynthesis, mitochondrial stimulation, *Bhaduri and Srere*, 1357
Carbon, glutamate carbon conversion to via citrate, influence of glucose, lactating rat mammary gland, *Madsen, Abraham, and Chaikoff*, 1305
Distribution pattern, retention in dietary triglyceride, marine animals, *Brockerhoff, Hoyle, and Ronald*, 735
Enzymatic ω-oxidation, products of octanoate, decanoate, and laurate oxidation, *Kusunose, Kusunose, and Coon*, 1374
—, substrate specificity and other properties, *Kusunose, Kusunose, and Coon*, 2135
Essential; enzymatic conversion to prostaglandins, *Bergström, Danielsson, Klenberg, and Samuelsson*, PC4006
Free; mobilization, experimental diabetes, *Tarrant, Mahler, and Ashmore*, 1714
Individual, biosynthesis in adipose tissue, effect of diabetes and insulin, *Benjamin and Gellhorn*, 64
Long chain; rat liver, ω-oxidation, *Preiss and Bloch*, 85
—; saturated, conversion to α,β-unsaturated, β,γ-unsaturated, and β-hydroxy derivatives by enzymes from slime mold, *Dictyostelium discoideum, Davidoff, and Korn*, 2496
Δ^9- and Δ^5-monosaturated; biosynthesis by bacteria, *Fulco, Levy, and Bloch*, 998
Oxidation and phosphorylation reactions in rat liver mitochondria, albumin antagonism, *Björntrop, Ells, and Bradford*, 339
Rate of oxidation, animal tissues, effect of substrate concentration, pH, and coenzyme A, rat liver preparations, *Ontko and Jackson*, 3674
Synthesis, acyl-bound intermediates, *Goldman*, 3663
—, animal tissues, occurrence and biosynthesis of *cis*-vaccenic acid, *Holloway and Wakil*, 2489
Unsaturated; biosynthesis in *Acanthamoeba* species, *Korn*, 396
Δ^9-Unsaturated; *Mycobacterium phlei*, cofactor requirements, *Fulco and Bloch*, 993
Fatty acid synthetase: β-Hydroxydecanoyl coenzyme A dehydrase and, *Escherichia coli, Norris, Matsumura, and Bloch*, 3653
Soluble; avocado mesocarp, properties, *Overath and Stumpf*, 4103
Feedback inhibition: Glutamine-phosphoribosyl pyrophosphate amidotransferase, purine ribonucleotides, *Caskey, Ashton, and Wyngaarden*, 2570

Fatty acid synthetase—*Continued*
Multivalent; aspartokinase, *Bacillus polymyxa, Paulus, and Gray,* PC4008
Pseudo-; 6-mercaptopurine ribonucleotide and other purine analogues, purine synthesis, *McCollister, Gilbert, Ashton, and Wyngaarden,* 1560
Ferricyanide: Electron acceptor, dehydrogenation of L-lactate, kinetic investigations of yeast L-lactate dehydrogenase (cytochrome b_2), *Morton and Sturtevant,* 1614
Ferrocytochrome *c*: Reactivity with iron-binding ligands, *George and Schejter,* 1504
Fetal development: Lactic and malic dehydrogenases, multiple molecular forms, *Wiggert and Villee,* 444
Fetuin: Glycoprotein; periodate oxidation, *Spiro,* 567
Ficin: *Ficus carica* and *Ficus glabrata* latices, separation, *Sgarbieri, Gupte, Kramer, and Whitaker,* 2170
Ficus carica var. Kakota latex, properties, *Kramer and Whitaker,* 2178
Flavin: Acid-nonextractable; determination from heart muscle, *Wilson and King,* 2683
-Cellulose compounds, column chromatography, purification of liver flavokinase, *Arsenis and McCormick,* 3093
Galacto-. *See* Galactoflavin
Ribo-. *See* Riboflavin
Flavokinase: Liver; purification by column chromatography on flavin-cellulose compounds, *Arsenis and McCormick,* 3093
Flavoprotein(s): Glyoxylate carboligase of *Escherichia coli, Gupta and Vennesland,* 3787
Iron-containing; absorption spectra, *Rajagopalan and Handler,* 1509
Fluorene: 2-Acetylamino-; enzymatic *N*-hydroxylation, metabolism of *N*-hydroxy-2-acetylaminofluorene-9-^{14}C *in vitro, Irving,* 1589
Folate-like compounds: Enzymatic synthesis, hydroxymethyldihydropteridine pyrophosphate, *Shiota, Disraely, and McCann,* 2259
Folic acid: Biosynthesis, characteristics of enzyme system catalyzing dihydropteroic acid synthesis, *Weisman and Brown,* 326
—, enzymatic formation of dihydrofolic acid from dihydropteroic acid and of tetrahydropteroylpolyglutamic acid compounds from tetrahydrofolic acid, *Griffin and Brown,* 310
Biosynthesis, enzymatic synthesis of dihydrofolic acid from guanine and ribose compounds, *Reynolds and Brown,* 317
Dihydro-. *See* Dihydrofolic acid
Tetrahydro-. *See* Tetrahydrofolic acid
Folic acid antagonists: Inhibition of dihydrofolate reductase, *Bertino, Booth, Bieber, Cashmore, and Sartorelli,* 479
Folic acid precursors: Human erythrocytes; purification and properties, *Iwai, Luttner, and Toennies,* 2365
Formaldehyde-^{14}C,D_2: Intramolecularly labeled; biogenesis of choline and methionine methyl groups and serine hydroxymethyl group, *Rachele, White, and Grünewald,* 353
Formate: Incorporation into lipids of adipose tissue, *Gliemann and Dole,* 4062
Formylase: Tetrahydrofolate. *See* Tetrahydrofolate formylase
Formyl phosphate: Enzymatic synthesis, carbamyl phosphate synthetase, *Raijman and Grisolia,* 1272
Fructose: Metabolism, adipose tissue, effect of dexamethasone and 2-deoxy-D-glucose, *Fain,* 958
D-; metabolism, rat liver, *DiPietro,* 4051
Fructose 1,6-diphosphate: Cortisone-induced hepatic synthesis, inhibition by actinomycin and puromycin, *Weber and Singhal,* 521
Fructose 6-phosphate: enantiomorphic monotritiated primary carbinols, intracellular generation, metabolism by rat liver slices, *Bloom,* 2102
Fucose: -Containing glycolipid isolated from human cancerous tissue, *Hakomori and Jeanloz,* PC3606
L-; metabolism in rat, *Coffey, Miller, and Sellinger,* 4011
Fumarase: Subunits, *Kanarek, Marler, Bradshaw, Fellows, and Hill,* 4207
Swine heart muscle, preparation and characterization, *Kanarek and Hill,* 4202

G

Galactitol: Isolation and identification, urine of patients with galactosemia, *Wells, Pittman, and Egan,* 3192
Galactoflavin: Effects on riboflavin enzymes and coenzymes, *Prosky, Burch, Bejrablaya, Lowry, and Combs,* 2691
Galactokinase: *Saccharomyces fragilis,* purification and properties, *Heinrich,* 50
Galactomannan: *Leucaena glauca;* enzymatic hydrolysis, isolation of crystalline galactomannan depolymerase, *Hylin and Sawai,* 990
Galactomannan depolymerase: Crystalline, isolation, enzymatic hydrolysis of *Leucaena glauca* galactomannan, *Hylin and Sawai,* 990
Galactose: -Containing glycolipid isolated from human cancerous tissue, *Hakomori and Jeanloz,* PC3606
Incorporation, bacterial lipopolysaccharide biosynthesis, particulate and soluble enzymes in *Salmonella, Rothfield, Osborn, and Horecker,* 2788
Incorporation product, characterization, biosynthesis of bacterial lipopolysaccharide, *Rosen, Osborn, and Horecker,* 3196
Transport, *Escherichia coli,* mechanism underlying retention of intracellular galactose, *Rotman and Radojkovic,* 3153
Galactose operon: *Escherichia coli,* enzymes, purification and characterization of uridine diphosphogalactose 4-epimerase, *Wilson and Hogness,* 2469
Galactosemia: Isolation and identification of galactitol from urine, *Wells, Pittman, and Egan,* 3192
Galactosidase: β-D-; single centers, *Escherichia coli* ribosomes, distribution and activity, *Lederberg, Rotman, and Lederberg,* 54
Gallstones: Allodeoxycholic acid as major component, induced in rabbit by 5α-cholestan-3β-ol, *Hofmann and Mosbach,* 2813
Gangliosides: Brain; fluorometric assay of sialic acid, *Hess and Rolde,* 3215
Geranylgeranyl pyrophosphate synthetase: Purification, *Micrococcus lysodeikticus, Kandutsch, Paulus, Levin, and Bloch,* 2507
Globin: αβ subunits, preparation, prop-

XUM

Globin—*Continued*
erties, and specific recombination, *Winterhalter and Huehns*, 3699
Native human; combination with porphyrins, *Gibson*, 3282
γ-Globulin: Human; carbohydrate prosthetic group, *Clamp and Putnam*, 3233
Normal rabbit; conformation and hydrogen ion equilibrium, *Gould, Gill, and Doty*, 2842
Rabbit; papain cleavage, isolation of new intermediate, *Nelson*, 3727
—; re-formation of interchain bonds linking half-molecules, *Stein, Palmer, and Nisonoff*, 2872
Glucagon-degrading enzyme: Beef liver; properties, *Kakiuchi and Tomizawa*, 2160
Glucocorticoids: Mode of action, stimulation of gluconeogenesis independent of enzyme synthesis *de novo*, *Ray, Foster, and Lardy*, 3396
Gluconeogenesis: Stimulation by glucocorticoids, independent of enzyme synthesis *de novo*, *Ray, Foster, and Lardy*, 3396
Glucosamine: *N*-Acetyl-; conjugate of 17α-estradiol, isolation from rabbit urine, *Layne, Sheth, and Kirdani*, 3221
-Containing glycolipid isolated from human cancerous tissue, *Hakomori and Jeanloz*, PC3606
Intermediates, plasma glycoprotein synthesis, livers of puromycin-treated rats, *Molnar, Robinson, and Winzler*, 3157
Glucosamine-^{14}C: Incorporation, liver and plasma proteins, rat, glycoprotein biosynthesis, *Robinson, Molnar, and Winzler*, 1134
D-; perfusion of rat liver, acid-soluble products, hexosamine metabolism, *DelGiacco and Maley*, PC2400
Glucosaminidase: β-*N*-Acetyl-D-; beef liver, oligosaccharase activity, *Weissmann, Hadjiioannou, and Tornheim*, 59
Glucose: Amino acid carbon incorporation into proteins, fatty acids, and carbon dioxide, lactating rat mammary gland, *Abraham, Madsen, and Chaikoff*, 855
Catabolism, major pathways, influence of insulin and epinephrine, *Flatt and Ball*, 675
-Containing glycolipid isolated from human cancerous tissue, *Hakomori and Jeanloz*, PC3606
2-Deoxy-D-; fructose and glucose metabolism, adipose tissue, *Fain*, 958
D-; enzymatic phosphorylation with acetyl phosphate, *Kamel and Anderson*, PC3607
Glutamate carbon conversion to fatty acid carbon via citrate, lactating rat mammary gland, *Madsen, Abraham, and Chaikoff*, 1305
Human blood; diabetic and nondiabetic, distribution labeling by DL-lactate-2-^{14}C or pyruvate-2-^{14}C, *Shreeve and De Meutter*, 729
Incorporation, bacterial lipopolysaccharide biosynthesis, particulate and soluble enzymes in *Salmonella, Rothfield, Osborn, and Horecker*, 2788
D-; metabolic pathways in *Salmonella typhimurium*, study of mutant lacking phosphoglucose isomerase, *Fraenkel and Horecker*, 2765
Metabolism, adipose tissue, effect of dexamethasone and 2-deoxy-D-glucose, *Fain*, 958
—, bone, *in vitro*, *Flanagan and Nichols*, 1261
—, human erythrocytes, role of glucose 6-phosphate, *Rose and O'Connell*, 12
—, isolated fat cells, effects of hormones, *Rodbell*, 375
—, lymphoid tissue, effects of cortisol, *Blecher*, 1299
—, pathway contributions, rate of hexose 6-phosphate isomerization, *Landau, Bartsch, Katz, and Wood*, 686
—, pathways, quantitative estimation, rat adipose tissue *in vitro*, *Landau and Katz*, 697
6-*O*-Methyl-D-; mycobacteria, *Lee and Ballou*, PC3602
Glucose-^{14}C: Formation, labeled substrates, effect of acute insulin insufficiency, experimental diabetes, *Wagle and Ashmore*, 1289
Glucose dehydrogenase: *Bacterium anitratum;* novel prosthetic group, *Hauge*, 3630
Rat liver; studies, *Metzger, Wilcox, and Wick*, 1769
Glucose oxidase: Kinetics and mechanism of action, *Gibson, Swoboda, and Massey*, 3927
Glucose 6-phosphatase: Cortisone-induced hepatic synthesis, inhibition by actinomycin and puromycin, *Weber and Singhal*, 521
Identity with inorganic pyrophosphatase and pyrophosphate-glucose phosphotransferase, *Nordlie and Arion*, 1680
Microsomal; probable identity with inorganic pyrophosphatase and pyrophosphate phosphotransferase, *Stetten and Taft*, 4041
Rat liver microsomes; inorganic pyrophosphatase, pyrophosphate-glucose phosphotransferase and, kinetic studies, *Arion and Nordlie*, 2752
Glucose 6-phosphate: Glucose metabolism, human erythrocytes, *Rose and O'Connell*, 12
α-Glucosidases: Liver, *Torres and Olavarría*, 2427
Glucosides: Cyanogenic; linamarin and lotaustralin, biosynthesis, labeling studies *in vivo* with *Linum usitatissimum, Butler and Conn*, 1674
Glucosyltransferase: Sucrose-uridine diphosphate. *See* Sucrose-uridine diphosphate glucose glucosyltransferase
Uridine diphosphate glucose-β-1,3-glucan β-3-. *See* Uridine diphosphate glucose-β-1,3-glucan β-3-glucosyltransferase
Uridine diphosphate glucose-glycogen. *See* Uridine diphosphate glucose-glycogen glucosyltransferase
Glutamate: Acetyl-; carbamyl phosphate synthetase activator, mechanism of action, *Fahien, Schooler, Gehred, and Cohen*, 1935
Carbon, conversion to fatty acid carbon via citrate, influence of glucose, lactating rat mammary gland, *Madsen, Abraham, and Chaikoff*, 1305
Glutamate dehydrogenase: L-; polypeptide chains, molecular weight, *Marler and Tanford*, 4217
Glutamate mutase: System, assays and properties, *Barker, Rooze, Suzuki, and Iodice*, 3260
Glutamic acid: L-; -adding enzyme, purification and properties, peptide synthesis in bacterial uridine nucleotides, *Nathenson, Strominger, and Ito*, 1773
Entry into metabolic pathways in kidney, enzyme-regulatory mechanisms, *Kun, Ayling, and Baltimore*, 2896
Poly-. *See* Polyglutamic acid
Glutamic-aspartic transaminase: Equilibrium kinetics with *erythro*-β-

Glutamic-aspartic transaminase—*Continued*
hydroxyaspartic acid, *Jenkins*, 1742
Glutamic-glycine transaminase: Rat liver, *Nakada*, 468
Glutamic-oxaloacetic transaminases: Anionic and cationic, human heart and liver, immunochemical and kinetic properties, *Nisselbaum and Bodansky*, 4232
Soluble and mitochondrial fractions, mammalian tissues, immunochemical distinction, *Morino, Kagamiyama, and Wada*, PC943
Glutamine-phosphoribosyl pyrophosphate amidotransferase: Feedback inhibition by purine ribonucleotides, *Caskey, Ashton, and Wyngaarden*, 2570
γ-Glutamyltransferase: *Agaricus bisporus, Gigliotti and Levenberg*, 2274
Glutarate: Metabolism in *Pseudomonas*, enzymatic studies, *Numa, Ishimura, Nakazawa, Okazaki, and Hayaishi*, 3915
Glutaric acid: β-Hydroxy-β-methyl-; activation and metabolism, *Burch, Rudney, and Irias*, 4111
α-Monofluoro-; synthesis, enzyme-inhibitory properties, *Gottwald, Ayling, and Kun*, 435
Glutathione: Oxidized and reduced; effect on swelling, lysis, and disintegration of isolated liver mitochondria, *Hunter, Scott, Hoffsten, Gebicki, Weinstein, and Schneider*, 614
—; mitochondrial swelling and lipid peroxide formation, effect of phosphate and arsenate, *Hunter, Scott, Weinstein, and Schneider*, 622
Glyceride-glycerol: Synthesis *in vitro*, livers of normal and pancreatectomized rats, *Chernick and Scow*, 2416
Glycerol: Dissimilation in *Escherichia coli*, control, *Koch, Hayashi, and Lin*, 3106
Metabolism, rat liver, *in vitro*, environmental carbon dioxide and pH, *Longmore, Hastings, and Mahowald*, 1700
Glycerol-3-^{3}H,1,3-^{14}C: Hexose synthesis in liver and muscle, *Bloom and Foster*, 967
Glycerophosphate: L-α-; active transport in *Escherichia coli, Hayashi, Koch, and Lin*, 3098
—; dissimilation in *Escherichia coli*, control, *Koch, Hayashi, and Lin*, 3106
Poly-. *See* Polyglycerophosphate
Glyceryl ethers: Oxidation, pteridine-requiring enzyme system, *Tietz, Lindberg, and Kennedy*, 4081
Glycine(s): Acetyl-; ethyl ester, hydrolysis, nonspecific catalyses by trypsin and α-chymotrypsin, mechanism of specificity of trypsin catalysis, *Inagami and Mitsuda*, 1388
—; —, —, trypsin catalysis, activation of catalytic site by alkylammonium ions, *Inagami and Murachi*, 1395
D-Alanine and, enzyme-substrate complexes with serine transhydroxymethylase, properties, *Schirch and Jenkins*, 3801
N-Methyl-; oxidation by primate liver mitochondria, assay, purification, and characterization of sarcosine dehydrogenase, *Hoskins and Bjur*, 1856
Glycogen: Extraction procedures, comparison of products, *Orrell and Bueding*, 4021
Metabolism, enzymes, fetal decapitation, *Jacquot and Kretchmer*, 1301
Polydisperse; mild isolation procedure from animal tissues, *Bueding and Orrell*, 4018
Glycogenolysis: Regulation in muscle, control of glycogen phosphorylase activity, *Morgan and Parmeggiani*, 2440
—, control of glycogen phosphorylase reaction, isolated perfused heart, *Morgan and Parmeggiani*, 2435
Tetanic contraction of isolated mouse muscles, presence and absence of phosphorylase *a*, *Danforth and Lyon*, 4047
Glycogen phosphorylase: Activity, muscle, control, *Morgan and Parmeggiani*, 2440
Reaction, control, isolated perfused heart, *Morgan and Parmeggiani*, 2435
Glycogen phosphorylase *b*: Intestinal smooth muscle, tissue specificity, *Bueding, Kent, and Fisher*, 2099
Glycohydrolase: Nicotinamide adenine dinucleotide. *See* Nicotinamide adenine dinucleotide glycohydrolase
Glycolipid(s): Bacterial; chemical characterization and enzymic synthesis, *Lennarz*, PC3110
Containing fucose, galactose, glucose, and glucosamine, isolation from human cancerous tissue, *Hakomori and Jeanloz*, PC3606
Mycobacterium tuberculosis and *Mycobacterium phlei*, myo-inositol mannosides, *Lee and Ballou*, 1316
Phyto-; structure, *Carter, Brooks, Gigg, Strobach, and Suami*, 743
Glycolysis: Adjustment to energy utilization, perfused rat heart, effect of ionic composition on phosphofructokinase activity, *Regen, Young, Davis, Jack, and Park*, 381
Brain; substrate-enzyme relationships, *Lowry and Passonneau*, 31
Muscle, regulation, conversion of phosphorylase *b* to *a* in frog sartorius muscle, *Danforth and Helmreich*, 3133
—, —, effect of insulin, epinephrine, and contraction on phosphofructokinase activity in frog skeletal muscle, *Özand and Narahara*, 3146
—, —, effect of stimulation and epinephrine in frog sartorius, *Karpatkin, Helmreich, and Cori*, 3139
Glycolytic pathway: Brain; known substrates and cofactors, effect of ischemia, *Lowry, Passonneau, Hasselberger, and Schulz*, 18
Glycopeptide(s): Ribonuclease B structure, isolation, *Plummer and Hirs*, 2530
Streptococcal; liberation of alanine-containing glucosaminylmuramic acid derivative by lysozyme, *Heymann, Manniello, and Barkulis*, 2981
Glycoprotein(s): Biosynthesis, glucosamine-^{14}C incorporation into liver and plasma proteins, rat, *Robinson, Molnar, and Winzler*, 1134
—, glucosamine intermediates in plasma glycoprotein synthesis, livers of puromycin-treated rats, *Molnar, Robinson, and Winzler*, 3157
Fetuin, periodate oxidation, *Spiro*, 567
Threonine and serine linkages, *Anderson, Seno, Sampson, Riley, Hoffman, and Meyer*, PC2716
Glycosides: Antibiotic; comparison of 2-methylmalonate and propionate

Glycosides—*Continued*
as precursors of C_{21} branched chain lactone in erythromycin, *Friedman, Kaneda, and Corcoran*, 2386
Complex; fungal metabolism, ustilagic acid, *Eveleigh, Dateo, and Reese*, 839
Glyoxylate carboligase: *Escherichia coli*, flavoprotein, *Gupta and Vennesland*, 3787
Gramicidin D: Action on isolated liver mitochondria, *Weinstein, Scott, and Hunter*, 3031
Growth hormone: Bovine; purification, *Dellacha and Sonenberg*, 1515
Hexokinase and phosphofructokinase activity in heart muscle, *Regen, Davis, Morgan, and Park*, 43
Guanidine group: Streptomycin, origin, *Horner*, 578
Guanidinium ion: Xanthine oxidase, competitive inhibition with urea, *Fridovich*, 3519
Guanine compounds: Dihydrofolic acid synthesis, *Reynolds and Brown*, 317
Guanine oligonucleotides: Complex formation with polycytidylic acid, *Lipsett*, 1256
Guanine oligoribonucleotides: Aggregation, effect of mercuric salts, *Lipsett*, 1250
Guanosine diphosphate: Polynucleotide phosphorylase, substrate and inhibitor, *Brenneman and Singer*, 893
Guanosine diphosphate α-D-mannose: Guanosine diphosphate D-rhamnose and -talomethylose from, *Markovitz*, 2091
Guanosine diphosphate mannose pyrophosphorylase: *Arthrobacter*, purification and properties, *Preiss and Wood*, 3119
Guanosine diphosphate D-rhamnose: Guanosine diphosphate D-talomethylose and, biosynthesis from guanosine diphosphate α-D-mannose, *Markovitz*, 2091
Guanosine diphosphate D-talomethylose: Guanosine diphosphate D-rhamnose and, biosynthesis from guanosine diphosphate α-D-mannose, *Markovitz*, 2091
Guanosine triphosphate: -Specific thiokinase, liver mitochondria, activation of fatty acids, *Rossi and Gibson*, 1694

H

^{3}H: Incorporation from labeled nucleotide sugars into polysaccharide, cell-free cartilage preparation, *Silbert*, 1310
Hapten: Antibody to, fragment, unfolding and renaturation, *Noelken and Tanford*, 1828
Heart: Beef; respiratory chain-linked reduced nicotinamide adenine dinucleotide dehydrogenase, purification and properties, *Cremona and Kearney*, 2328
Bovine; lactate dehydrogenase, equilibrium reaction rate and mechanism, *Silverstein and Boyer*, 3901
Dog; myosin, characterization, *Mueller, Franzen, Rice, and Olson*, 1447
Horse; preparation of crystalline oxymyoglobin, *Yamazaki, Yokota, and Shikama*, 4151
Human; lactic dehydrogenase variant, comparison of action on nucleotide and substrate analogues with human brain and liver variants in presence and absence of oxalate and oxamate, *Nisselbaum, Packer, and Bodansky*, 2830
—; liver and, anionic and cationic glutamic - oxaloacetic transaminases, immunochemical and kinetic properties, *Nisselbaum and Bodansky*, 4232
Isolated perfused; control of glycogen phosphorylase reaction, *Morgan and Parmeggiani*, 2435
Mitochondria, aged, restoration of adenosine triphosphate-supported accumulation of Ca^{++}, *Brierley, Murer, and Bachmann*, 2706
—, iron, copper, cytochrome, and lipid contents, *King, Nickel, and Jensen*, 1989
Pig; succinic thiokinase, purification, *Cha and Parks*, 1961
Rat; isolated perfused, metabolic effects of epinephrine, *Williamson*, 2721
—; normal and alloxan-diabetic, homogenates, carbohydrate utilization and high energy phosphate formation, *Haugaard and Haugaard*, 705
—; perfused, energy utilization, glycolysis adjustment, effect of ionic composition on phosphofructokinase activity, *Regen, Young, Davis, Jack, and Park*, 381
Heart—*Continued*
Sarcosomes, respiratory control, role of citrate, *Campello, Voss, Freire, and Bacila*, 3942
Heart muscle: Hexokinase and phosphofructokinase activity, effects of alloxan diabetes, growth hormone, cortisol, and anoxia, *Regen, Davis, Morgan, and Park*, 43
Mitochondrial preparations, acid-nonextractable flavin determination, *Wilson and King*, 2683
Relaxation mechanism, role of calcium, *Fanburg, Finkel, and Martonosi*, 2298
Swine; preparation and characterization of fumarase, *Kanarek and Hill*, 4202
Heart muscle particles: Reduced diphosphopyridine nucleotide oxidase, mechanism of stimulation by soluble cytochrome *c*, *Camerino and Smith*, 2345
Heart muscle preparation: Iron, copper, cytochrome, and lipid contents, *King, Nickel, and Jensen*, 1989
Heat capacities: L-Cystine and L-methionine, transition of L-methionine near 305.5° K, *Hutchens, Cole, and Stout*, 591
L-Serine formation, 11 to 305° K, *Hutchens, Cole, and Stout*, 4194
Heat-stable factor: Requirement for contraction of pretreated mitochondria, *Vignais, Vignais, and Lehninger*, 2002
HeLa cells: Phosphorylase, purification and properties, *Alpers and Schachter*, 3640
Heme: Binding to sperm whale apomyoglobin, changes in side chain reactivity, *Breslow*, 486
Heme proteins: Oxidation-reduction potentials, carboxypeptidase digests of human hemoglobin, *Brunori, Antonini, Wyman, Zito, Taylor, and Rossi-Fanelli*, 2340
Hemoglobin(s): Human; digestion by carboxypeptidases, effect of oxygenation, *Zito, Antonini, and Wyman*, 1804
—; —, oxidation-reduction potentials, heme proteins, *Brunori, Antonini, Wyman, Zito, Taylor, and Rossi-Fanelli*, 2340
—; modified, characterization, reaction with iodoacetamide and *N*-ethylmaleimide, *Guidotti and Konigsberg*, 1474
—: oxidation-reduction potentials, heme proteins, *Antonini, Wyman,*

Hemoglobin(s)—*Continued*
Brunori, Taylor, Rossi-Fanelli, and Caputo, 907
Synthesis, avian erythrocytes, *Hammel and Bessman,* 2228
Hemoglobin H: Reaction with ligands, rates, *Benesch, Gibson, and Benesch,* PC1668
Hemophilus parainfluenzae: Five primary electron transport dehydrogenases, differential synthesis, *White,* 2055
Hemophilus parasuis: Type-specific substances, *Williamson and Zamenhof,* 963
Hemoprotein: Carbon monoxide-binding pigment, liver microsomes, *Omura and Sato,* 2370
Hepatectomy: Partial; nucleolar ribonucleic acid metabolism, *Tsukada and Lieberman,* 1564
—; ribonucleic acid synthesis by liver nuclear and nucleolar preparations, *Tsukada and Lieberman,* 2952
Hexitol dehydrogenases: *Bacillus subtilis, Horwitz and Kaplan,* 830
Hexokinase: Activity, heart muscle, effects of alloxan diabetes, growth hormone, cortisol, and anoxia, *Regen, Davis, Morgan, and Park,* 43
—, human red cells, alteration on storage, assay, *Bishop,* 1053
Yeast; equilibrium and net reaction rates, *Fromm, Silverstein, and Boyer,* 3645
—; reaction, kinetics and mechanism, effect of manganous ion, *Zewe, Fromm, and Fabiano,* 1625
Hexosamine: Metabolism, acid-soluble products in rat liver following perfusion with D-glucosamine-1-^{14}C, *DelGiacco and Maley,* PC2400
Hexose(s): Incorporation into liver protein, initial subcellular site, *Sarcione,* 1686
Synthesis, liver and muscle, glycerol-3-^{3}H,1,3-^{14}C, *Bloom and Foster,* 967
Thymidine diphosphate 2-acetamido-4,6-dideoxy-; enzymatic synthesis, *Escherichia coli* strains, *Matsuhashi and Strominger,* 2454
Hexose 6-phosphate: Isomerization rate, estimation of pathway contributions to glucose metabolism, *Landau, Bartsch, Katz, and Wood,* 686
Higher plants: Enzyme systems, cellulose synthesis, *Barber, Elbein, and Hassid,* 4056
Hill reaction: Photophosphorylation and, enhancement by carbon dioxide, *Punnett and Iyer,* 2335
Hippuric acid esters: Reactions catalyzed by α-chymotrypsin, effect of hydroxylamine on kinetics, *Epand and Wilson,* 4138
Histidine: Biosynthesis, early steps, intermediate, *Smith and Ames,* 1848
Carboxymethyl-; ribonucleases, denaturation and binding properties, *Yang and Hummel,* 3775
Metabolism, histidinemia and imidazolepyruvic aciduria, *Baldridge and Auerbach,* 1557
Reactivity, carboxymethylation of sperm whale metmyoglobin, *Banaszak and Gurd,* 1836
Histidine operon: Enzymes, sedimentation properties, *Whitfield, Smith, and Martin,* 3288
Histidinemia: Histidine metabolism, *Baldridge and Auerbach,* 1557
Holotranscarboxylase: Enzymatic synthesis from apotranscarboxylase and (+)-biotin, investigation of reaction mechanism, *Lane, Rominger, Young, and Lynen,* 2865
—, purification of apoenzyme and synthetase, characteristics of reaction, *Lane, Young, and Lynen,* 2858
Homocysteine: Methyl transfer to, from 5,6-dimethylbenzimidazolylcobamide methyl (methyl-B_{12}), *Weissbach, Redfield, and Dickerman,* 1942
Homeostasis: Enzymes, actinomycin and puromycin inhibition of cortisone-induced synthesis of hepatic glucose 6-phosphatase and fructose 1,6-diphosphatase, *Weber and Singhal,* 521
Homoserine: L-; *Canavalia ensiformis,* identification, *Thompson, Morris, and Hunt,* 1122
Hormone(s): Glucose metabolism, lipolysis, isolated fat cells, *Rodbell,* 375
Growth. *See* Growth hormone
Induction of threonine dehydrase and ornithine δ-transaminase, carbohydrate repression, rat liver, *Peraino and Pitot,* 4308
Lactic dehydrogenase, *Goodfriend and Kaplan,* 130
Luteinizing. *See* Luteinizing hormone
Parathyroid. *See* Parathyroid hormone
-Sensitive lipase activity, adipose tissue, *Vaughan, Berger, and Steinberg,* 401
Thyroid. *See* Thyroid hormones
Human cells: Cultured; enzymology and regulation of serine biosynthesis, *Pizer,* 4219
Hyaluronic acid: Isolation from broth cultures of streptococci, *Thonard, Migliore, and Blustein,* 726
Hydrazine: Aryl-; γ-glutamyl-substituted, Agaricaceae, isolation and structure, *Levenberg,* 2267
Hydrogen: -Deuterium exchange, analysis, pH-dependent transitions, bovine plasma albumin, *Benson, Hallaway, and Lumry,* 122
Interamide bonding, aqueous solution, near infrared investigation, *Susi, Timasheff, and Ard,* 3051
Hydrogen chloride: Trifluoroacetic acid and, sorption on poly-L-valine and poly-L-leucine, *Brandt and Budrys,* 1442
Hydrogen donor: *Escherichia coli* B, thioredoxin, isolation and characterization, enzymatic synthesis of deoxyribonucleotides, *Laurent, Moore, and Reichard,* 3436
Hydrogen fluoride: Nitrogen to acyl shift, specific cleavage of peptide chains, *Lenard and Hess,* 3275
Hydrogen ion: Equilibria, human carbonic anhydrase B, *Riddiford,* 1079
—, normal rabbit γ-globulin, *Gould, Gill, and Doty,* 2842
Hydrogen transfer: Direct, methylmalonyl coenzyme A mutase, *Erfle, Clark, Nystrom, and Johnson,* 1920
Kinetics, hypoxanthine and dimethylbiacridylium nitrate, chick liver xanthine dehydrogenase, *De Angelis and Totter,* 1012
5,10-Methylenetetrahydrofolic dehydrogenase reaction, stereospecificity, *Ramasastri and Blakley,* 112
Reduced diphosphopyridine nucleotide dehydrogenase and respiratory chain, effect of sulfhydryl inhibitors and phospholipase, *Minakami, Schindler, and Estabrook,* 2042
—, initial lag in oxidation of reduced diphosphopyridine nucleotide, *Min-*

Hydrogen transfer—*Continued*
— *akami, Schindler, and Estabrook*, 2049
Reversible, direct, from reduced pyridine nucleotides to cytochrome b_5 reductase, Strittmatter, 3043
Hydrogen transport enzymes: Localization, *Hemophilus parainfluenzae*, nature of respiratory chain system, *White and Smith*, 3956
α-Hydroxy acid decarboxylase: Brain microsomes, *Levis and Mead*, 77
α-Hydroxy acid dehydrogenase: D-; lactic dehydrogenases of yeast, *Cremona*, 1457
3β-Hydroxy-5α-androstan-17-one-^{14}C: Isolation, androst-4-ene-3,17-dione-4-^{14}C metabolism *in vitro*, rabbit skeletal muscle strips, *Thomas and Dorfman*, 762
3β-Hydroxyandrost-4-en-17-one-^{14}C: 3β-Hydroxyandrost-5-en-17-one-^{14}C and, from androst-4-ene-3,17-dione-4-^{14}C, reversal of 3β-hydroxysteroid dehydrogenase-isomerase reactions, *Ward and Engel*, PC3604
Isolation, androst-4-ene-3,17-dione-4-^{14}C metabolism, rabbit skeletal muscle supernatant, *Thomas and Dorfman*, 766
3β-Hydroxyandrost-5-en-17-one-^{14}C: 3β-Hydroxyandrost-4-en-17-one-^{14}C and, from androst-4-ene-3,17-dione-4-^{14}C, reversal of 3β-hydroxysteroid dehydrogenase-isomerase reactions, *Ward and Engel*, PC3604
17α-Hydroxyandrost-4-en-3-one: Isolation from human urine, *Korenman, Wilson, and Lipsett*, 1004
β-Hydroxydecanoyl coenzyme A dehydrase: Fatty acid synthetase and, *Escherichia coli*, *Norris, Matsumura, and Bloch*, 3653
Hydroxylamine: Kinetics of α-chymotrypsin-catalyzed reactions of hippuric acid esters, *Epand and Wilson*, 4138
Hydroxylapatite: Chromatography, separation of human ceruloplasmin fractions, *Deutsch and Fisher*, 3325
Hydroxylase: Tyrosine. *See* Tyrosine hydroxylase
Hydroxyl group(s): Phenolic; pepsinogen, ionization, Perlmann, 3762
Terminal; deoxyribonucleotides, selective acetylation, *Stuart and Khorana*, 3885
"17β-Hydroxyl pathway": Conversion of testosterone-17α-^{3}H to 5α- and 5β-androstane-3α,17β-diol-17α-^{3}H, *Baulieu and Mawais-Jarvis*, 1569
Hydroxylysine: Lysine and, relationships in *Streptococcus faecalis* and *Leuconostoc mesenteroides*, *Smith and Henderson*, 1867
Hydroxymethylase: Deoxycytidylate. *See* Deoxycytidylate hydroxymethylase
Hydroxymethyl group: Serine, biogenesis from intramolecularly labeled formaldehyde-^{14}C,D_2, *Rachele, White, and Grünewald*, 353
p-Hydroxyphenylpyruvate oxidase: Comparison with phenylpyruvate oxidase, *Taniguchi, Kappe, and Armstrong*, 3389
Hydroxyproline 2-epimerase: *Pseudomonas*, purification and properties, *Adams and Norton*, 1525
3β-Hydroxysteroid dehydrogenase-isomerase: Reversal of reactions, conversion of androst-4-ene-3,17-dione-4-^{14}C to 3β-hydroxyandrost-4-en-17-one-^{14}C and 3β-hydroxyandrost-5-en-17-one-^{14}C, *Ward and Engel*, PC3604
Hypervitaminosis A: Skeletal metabolism, *Clark and Smith*, 1266
Hypervitaminosis D: Skeletal metabolism, *Clark and Smith*, 1266
Hypoxanthine: Hydrogen transfer, dimethyldiacridylium nitrate, kinetics, chick liver xanthine dehydrogenase, *De Angelis and Totter*, 1012

I

^{131}I: Insulin labeling, high specific activity, *Izzo, Bale, Izzo, and Roncone*, 3743
Imidazoleacetic acid: 5′-Phosphoribosyl-; enzymatic synthesis, *Crowley*, 2593
Imidazolecarboxamide: Ribosyl-4-amino-5-; induction of inosine 5′-phosphate dehydrogenase and xanthosine 5′-phosphate aminase, purine-requiring mutants of *Escherichia coli* B, *Kuramitsu, Udaka, and Moyed*, 3425
Imidazolepyruvic acidura: Histidine metabolism, *Baldridge and Auerbach*, 1557
Indole-3-acetic acid: Photooxidation products, inhibition of cell growth, *Fukuyama and Moyed*, 2392
Indole analogues: Binding to defatted human serum albumin at different chloride concentrations, *McMenamy*, 2835
Inorganic pyrophosphatase: Identity with glucose 6-phosphatase and pyrophosphate-glucose phosphotransferase, *Nordlie and Arion*, 1680
Microsomal; probable identity with pyrophosphate phosphotransferase and glucose 6-phosphatase, *Stetten and Taft*, 4041
Rat liver microsomes; glucose 6-phosphatase, pyrophosphate-glucose phosphotransferase and, kinetic studies, *Arion and Nordlie*, 2752
Inorganic pyrophosphate: Metabolism, microsomal inorganic pyrophosphate phosphotransferase of rat liver, *Stetten*, 3576
—, probable identity of microsomal inorganic pyrophosphatase, pyrophosphate phosphotransferase, and glucose 6-phosphatase, *Stetten and Taft*, 4041
Inorganic pyrophosphate phosphotransferase: Microsomal, rat liver, *Stetten*, 3576
Inosine 5′-phosphate dehydrogenase: Induction by ribosyl-4-amino-5-imidazolecarboxamide, purine-requiring mutants of *Escherichia coli* B, *Kuramitsu, Udaka, and Moyed*, 3425
Inositol: Biochemical studies, biosynthesis by soluble enzyme system, *Chen and Charalampous*, 1905
Lysophosphatidyl-; enzymatic acylation, *Keenan and Hokin*, 2123
Myo-; streptodine moiety of streptomycin, precursor, *Horner*, 2256
Phosphatidyl-; identification as factor required in mitochondrial contraction, *Vignais, Vignais, and Lehninger*, 2011
Insulin: A and B chains, transport in serum, studies *in vitro*, *Ensinck, Coombs, Williams, and Vallance-Owen*, 3377
Acetoacetic acid metabolism, muscle, *Beatty, Peterson, Bocek, and West*, 2106
Acute insufficiency, experimental diabetes, ^{14}C-glucose formation from labeled substrates, *Wagle and Ashmore*, 1289
Disulfide bonds, electrolytic reduction, *Markus*, 4163

Insulin—*Continued*
Fatty acid biosynthesis, adipose tissue, *Benjamin and Gellhorn*, 64
Glucose catabolism, major pathways, adipose tissue metabolism, *Flatt and Ball*, 675
Hepatic uridine diphosphate glucose-glycogen glucosyltransferase synthesis, alloxan-diabetic rats, *Steiner and King*, 1292
Iodination, degree, relationship to biological, electrophoretic, and immunochemical properties, *Izzo, Roncone, Izzo, and Bale*, 3749
Labeling with ^{131}I, high specific activity, *Izzo, Bale, Izzo, and Roncone*, 3743
Phosphofructokinase activity in frog skeletal muscle, *Özand and Narahara*, 3146
Iodide peroxidase: Thyroid tissue, purification and properties, thyroxine biosynthesis, *Igo, Mahoney, and Mackler*, 1893
Iodine-donating substances: Thyroid hormones and, metabolism, site of action in respiratory chain, *Michel, Roche, Michel, Girard, and Rall*, 3062
Iodoproteins: Thyroidal; separation, purification of thyroglobulin by gel filtration and density gradient centrifugation, *Salvatore, Salvatore, Cahnmann, and Robbins*, 3267
Ion(s): Alkylammonium. *See* Alkylammonium ions
Calcium. *See* Calcium ions
Cupric. *See* Cupric ions
Guanidinium. *See* Guanidinium ion
Hydrogen. *See* Hydrogen ion
Magnesium. *See* Magnesium ions
Manganous. *See* Manganous ion
Transport, studies, restoration of adenosine triphosphate-supported accumulation of Ca^{++} in aged heart mitochondria, *Brierley, Murer, and Bachman*, 2706
Zinc. *See* Zinc ions
Ionic strength: Actomyosin reactions, influence of tropomyosin, *Katz*, 3304
Crystalline aldolase activity, mechanism, *Sánchez de Jiménez, Lee, Torres, and Soberón*, 4154
Synthetic polypeptide antigen-antibody interaction, antibody activity, *Gould, Gill, and Kunz*, 3071
Iron: -Binding ligands, reactivity with ferrocytochrome *c*, *George and Schejter*, 1504
-Containing flavoproteins, absorption spectra, *Rajagopalan and Handler*, 1509
Distribution in electron transfer system studied by electron paramagnetic resonance, *Rieske, Zaugg, and Hansen*, 3023
Ferric; compounds with adenosine triphosphate and other nucleoside phosphates, *Goucher and Taylor*, 2251
Heart muscle preparation and heart mitochondria, *King, Nickel, and Jensen*, 1989
Ischemia: Glycolytic pathway in brain, known substrates and cofactors, *Lowry, Passonneau, Hasselberger, and Schulz*, 18
Isobutyric acid: α-Amino-; respiration-coupled and passive uptake, *Bacillus megaterium, Marquis and Gerhardt*, 3361
Isocitrate lyase: Stereochemical course of reaction, *Sprecher, Berger, and Sprinson*, 4268
Isocitric dehydrogenase: Nicotinamide adenine dinucleotide-specific, possible regulatory protein, *Sanwal, Zink, and Stachow*, 1597
Isomerase: Methylmalonyl. *See* Methylmalonyl isomerase
Phosphoglucose. *See* Phosphoglucose isomerase
Tetraoxypteridine. *See* Tetraoxypteridine isomerase

K

2-Keto-3-deoxy-6-phosphogluconic aldolase: Crystallization and characteristics, *Meloche and Wood*, 3515
Mechanism, *Meloche and Wood*, 3511
2-Keto-4-hydroxyglutarate aldolase: Rat liver; purification and properties, *Maitra and Dekker*, 1485
Kidney: Metabolic pathways, entry of glutamic acid, enzyme-regulatory mechanisms, *Kun, Ayling, and Baltimore*, 2896
Rat; pyridoxamine-oxaloacetic transaminase, *Wu and Mason*, 1492
Kinase: Deoxythymidine. *See* Deoxythymidine kinase
Kinetics: Activation of mitochondrial adenosine triphosphatase by Mg^{++}, *Ulrich*, 3532
Alcohol dehydrogenases, liver and yeast, *Silverstein and Boyer*, 3908
Carbamyl phosphate synthetase, *Fahien and Cohen*, 1925
α-Chymotrypsin-catalyzed reactions of hippuric acid esters, effect of hydroxylamine, *Epand and Wilson*, 4138
Enzyme; analogue computer investigation, *Walter and Morales*, 1277
—; treatment of data, effect of modifiers on kinetic parameters of single substrate enzymes, *Frieden*, 3522
Glucose oxidase, *Gibson, Swoboda, and Massey*, 3927
Glucose 6-phosphatase, inorganic pyrophosphatase, and pyrophosphate-glucose phosphotransferase, *Arion and Nordlie*, 2752
Glutamic-aspartic transaminase, *erythro*-β-hydroxyaspartic acid, *Jenkins*, 1742
Hydrogen transfer between hypoxanthine and dimethylbiacridylium nitrate, chick liver xanthine dehydrogenase, *De Angelis and Totter*, 1012
Lactate dehydrogenase, bovine heart and rabbit muscle, *Silverstein and Boyer*, 3901
—, rat liver, *Anderson, Florini, and Vestling*, 2991
L-Lactate dehydrogenase (cytochrome b_2), dehydrogenation of L-lactate, ferricyanide as electron acceptor, *Morton and Sturtevant*, 1614
Mutatotases, *Keston*, 3241
Oxidation-reduction, copper component of cytochrome oxidase, rapid freezing technique, *Beinert and Palmer*, 1221
Phosphoglucomutase pathway, *Ray and Roscelli*, 1228
Phosphorylase *a*, muscle, effects of adenylic acid, *Lowry, Schulz, and Passonneau*, 1947
Yeast hexokinase, effect of manganous ion, *Zewe, Fromm, and Fabiano*, 1625
—, equilibrium and net reaction rates, *Fromm, Silverstein, and Boyer*, 3645
Yeast phosphofructokinase, effect of adenylate, *Ramaiah, Hathaway, and Atkinson*, 3619

L

Lactate: L-; dehydrogenation, ferricyanide as electron acceptor, *Morton and Sturtevant*, 1614
Lactate-2-^{14}C: DL-; glucose, human blood, distribution labeling, diabetic and nondiabetic, *Shreeve and De Meutter*, 729

Lactate dehydrogenase: Bovine heart and rabbit muscle; equilibrium reaction rates and mechanisms, *Silverstein and Boyer,* 3901
Rat liver; kinetics and specificity, *Anderson, Florini, and Vestling,* 2991
Reaction with reduced nicotinamide adenine dinucleotide, chemical relaxation, fluorescence detection, *Czerlinski and Schreck,* 913
L-; yeast, kinetic investigations, dehydrogenation of L-lactate, ferricyanide as electron acceptor, *Morton and Sturtevant,* 1614
Lactic acid-2-^{14}C: D- and L-; metabolism by rat skeletal muscle *in vivo, Koeppe, Inciardi, Warnock, and Wilson,* 3609
Lactic-cytochrome reductase: D-; chemical properties, function of zinc component, lactic dehydrogenases of yeast, *Cremona and Singer,* 1466
Lactic dehydrogenase(s): Comparative enzymology, properties of crystalline beef and chicken enzymes, *Pesce, McKay, Stolzenbach, Cahn, and Kaplan,* 1753
Denaturation, effect of sodium dodecyl sulfate, *Di Sabato and Kaplan,* 438
Hormone effects, *Goodfriend and Kaplan,* 130
Human brain, liver, and heart variants, comparison of actions on nucleotide and substrate analogues in absence and presence of oxalate and oxamate, *Nisselbaum, Packer, and Bodansky,* 2830
γ-Hydroxybutyrate, mammalian brain, reversible oxidation, *Fishbein and Bessman,* 357
Malic dehydrogenase and, multiple molecular forms during development, *Wiggert and Villee,* 444
Yeast; chemical properties and function of zinc component of D-lactic-cytochrome reductase, *Cremona and Singer,* 1466
—; D-α-hydroxy acid dehydrogenase, *Cremona,* 1457
β-Lactoglobulin C: Solution properties, *Townend, Herskovits, Swaisgood, and Timasheff,* 4196
Lactone: C_{21} branched chain; erythromycin, precursors, comparison of 2-methylmalonate and propionate, antibiotic glycosides, *Friedman, Kaneda, and Corcoran,* 2386
Lactose-synthesizing enzyme: Bovine milk, *Babad and Hassid,* PC946
Lanosta-7,24-dien-3β-ol: Enzymatic demethylation, rat liver homogenates, *Gaylor,* 756
Lanosterol: Enzymatic demethylation, rat liver homogenates, *Gaylor,* 756
Lanthanum: Use in study of degradation of proteinpolysaccharide from cartilage, *Doganges and Schubert,* 1498
Latex: *Ficus carica* and *Ficus glabrata,* ficin, *Sgarbieri, Gupte, Kramer, and Whitaker,* 2170
Ficus carica var. Kadota, ficin, *Kramer and Whitaker,* 2178
Laurate: ω-Oxidation, products, *Kusunose, Kusunose, and Coon,* 1374
Lecithins: Diether analogues, di-*O*-octadecyl-L-α-glycerylphosphorylcholine synthesis, *Stanacev, Baer, and Kates,* 410
Leucaena glauca: Galactomannan, enzymatic hydrolysis, isolation of crystalline galactomannan depolymerase, *Hylin and Sawai,* 990
Leucine: D-; polymyxin D biosynthesis, *DiGirolamo, Ciferri, DiGirolamo, and Albertini,* 502
Leuconostoc mesenteroides: Coupling of reduced pyridine nucleotide, *Kemp and Rose,* 2998
Lysine-hydroxylysine relationships, *Smith and Henderson,* 1867
Leukemia: L1210 mouse ascites; subcellular system, polypeptide synthesis, *Ochoa and Weinstein,* 3834
Light: Nitrite reduction, reconstituted enzymatic system, *Paneque, Ramirez, Del Campo, and Losada,* 1737
Linamarin: Biosynthesis, labeling studies *in vivo* with *Linum usitatissimum, Butler and Conn,* 1674
Lipase: Hormone-sensitive activity, adipose tissue, *Vaughan, Berger, and Steinberg,* 401
Lipoprotein. *See* Lipoprotein lipase
Monoglyceride-specific activity, adipose tissue, *Vaughan, Berger, and Steinberg,* 401
Lipid(s): Bacterial; metabolism and function, phospholipid biosynthesis in *Escherichia coli, Kanfer and Kennedy,* 1720
Formate incorporation, adipose tissue, *Gliemann and Dole,* 4062
Heart muscle preparation and heart mitochondria, *King, Nickel, and Jensen,* 1989
Metabolism, *Euglena gracilis, Hulanicka, Erwin, and Bloch,* 2778
Lipids—*Continued*
Peroxide, formation, mitochondria, effect of phosphate and arsenate, oxidized and reduced glutathione, *Hunter, Scott, Weinstein, and Schneider,* 622
Polar; -amino acid complex, *Pseudomonas aeruginosa,* structural composition, *Sinha and Gaby,* 3668
Lipolysis: Isolated fat cells, effects of hormones, *Rodbell,* 375
Lipolytic activity: Epinephrine-sensitive, adipose tissue, activation by adenosine 3′,5′-phosphate, *Rizack,* 392
Lipopolysaccharide: Bacterial; biosynthesis, characterization of galactose incorporation product, *Rosen, Osborn, and Horecker,* 3196
—; —, glucose and galactose incorporation catalyzed by particulate and soluble enzymes in *Salmonella, Rothfield, Osborn, and Horecker,* 2788
Lipoprotein: Secretion, rat liver, orotic acid-induced, adenine-reversed, *Windmueller,* 530
β-Lipoprotein: Human serum; proteolysis, *Bernfield and Kelley,* 3341
Lipoprotein lipase: Localization, fat cells, rat adipose tissue, *Rodbell,* 753
Lipoyl dehydrogenase: Free and complexed forms in mammalian mitochondria, *Lusty and Singer,* 3733
Lithocholic acid-24-^{14}C: Metabolism, bile acids, *Thomas, Hsia, Matschiner, Doisy, Elliott, Thayer, and Doisy,* 102
Liver: Alcohol dehydrogenase, coenzyme-binding mechanism, anomalous rotatory dispersion of enzyme complexes, *Li and Vallee,* 792
—, equilibrium reaction rate and mechanism, *Silverstein and Boyer,* 3908
Avian; methionine biosynthesis, role of vitamin B_{12}, *Dickerman, Redfield, Bieri, and Weissbach,* 2545
Beef; β-*N*-acetyl-D-glucosaminidase, oligosaccharase activity, *Weissmann, Hadjiioannou, and Tornheim,* 59
—; glucagon-degrading enzyme, properties, *Kakiuchi and Tomizawa,* 2160
Flavokinase, purification by column chromatography on flavin-cellulose compounds, *Arsenis and McCormick,* 3093

Liver—*Continued*
α-Glucosidases, *Torres and Olavarría*, 2427
Hexose synthesis, glycerol-3-^{3}H,1,3-^{14}C, *Bloom and Foster*, 967
Human; heart and, anionic and cationic glutamic-oxaloacetic transaminases, immunochemical and kinetic properties, *Nisselbaum and Bodansky*, 4232
—; lactic dehydrogenase variant, comparison of action on nucleotide and substrate analogues with human brain and heart variants in presence and absence of oxalate and oxamate, *Nisselbaum, Packer, and Bodansky*, 2830
Mammalian; enzymatic conversion of quinolinate to nicotinic acid mononucleotide, *Gholson, Ueda, Ogasawara, and Henderson*, 1208
—; isolation of cobalamin-containing transmethylase (5-methyltetrahydrofolate-homocysteine), enzymatic synthesis of methionine methyl group, *Loughlin, Elford, and Buchanan*, 2888
Messenger ribonucleic acid, studies, *Trakatellis, Axelrod, and Montjar*, 4237
Microsomes, carbon monoxide-binding pigment, hemoprotein nature, *Omura and Sato*, 2370
—, —, solubilization, purification, and properties, *Omura and Sato*, 2379
—, synthesis of vitamin A ester, *Futterman and Andrews*, 4077
Mitochondria, guanosine triphosphate-specific thiokinase, activation of fatty acids, *Rossi and Gibson*, 1694
—, isolated, action of gramicidin D, *Weinstein, Scott, and Hunter*, 3031
—, —, ascorbate-induced swelling and lysis, *Hunter, Scott, Hoffsten, Guerra, Weinstein, Schneider, Schutz, Fink, Ford, and Smith*, 604
—, —, effect of exposure to mixed oxidized and reduced glutathione on swelling, lysis, and disintegration, *Hunter, Scott, Hoffsten, Gebicki, Weinstein, and Schneider*, 614
Mitochondrial and soluble fractions, purification of alkaline ribonuclease II, *Beard and Razzell*, 4186
Nuclear and nucleolar preparations, partial hepatectomy, ribonucleic acid synthesis, *Tsukada and Lieberman*, 2952
Perfused; triglycerides, removal and metabolism, *Rodbell, Scow, and Chernick*, 385
Primate; mitochondria, oxidation of *N*-methylglycines, assay, purification, and characterization of sarcosine dehydrogenase, *Hoskins and Bjur*, 1856
Protein, hexose incorporation, initial subcellular site, *Sarcione*, 1686
Puromycin-treated rats; plasma glycoprotein synthesis, glucosamine intermediates, *Molnar, Robinson, and Winzler*, 3157
Rat; acid-soluble products, perfusion with D-glucosamine-1-^{14}C, hexosamine metabolism, *DelGiacco and Maley*, PC2400
—; arginase levels, control, importance of both synthesis and degradation, *Schimke*, 3808
—; arginyl ribonucleic acid synthetase, purification, substrate specificity, *Allende and Allende*, 1102
—; breakdown and reassembly of ergosomes after administration of ethionine or puromycin, *Villa-Trevino, Farber, Staehlin, Wettstein, and Noll*, 3826
—; carbohydrate repression of dietary and hormonal induction of threonine dehydrase and ornithine δ-transaminase, *Peraino and Pitot*, 4308
—; deoxyribonucleic acid synthesis, Zn^{++} requirement, *Fujioka and Lieberman*, 1164
—; deoxyribose phosphate aldolase, *Roscoe and Nelson*, 8
—; developing, pyridine nucleotides, *Burch and Von Dippe*, 1898
—; dispersed cells, effect of corticosteroids on enzyme leakage, *Takeda, Ichihara, Tanioka, and Inoue*, 3590
—; enzymes, formation of cholesterol esters, *Goodman, Deykin, and Shiratori*, 1335
—; —, induction and repression, induction of threonine dehydrase and ornithine δ-transaminase by oral intubation of casein hydrolysate, *Pitot and Peraino*, 1783
—; fatty acid oxidation, effect of substrate concentration, pH, and coenzyme A, *Ontko and Jackson*, 3674
Rat; D-fructose metabolism, *DiPietro*, 4051
—; glucose dehydrogenase, *Metzger, Wilcox, and Wick*, 1769
—; glutamic-glycine transaminase, *Nakada*, 468
—; glycerol metabolism *in vitro*, environmental carbon dioxide and pH, *Longmore, Hastings, and Mahowald*, 1700
—; homogenates, enzymatic demethylation of lanosterol and lanosta-7,24-dien-3β-ol, *Gaylor*, 756
—; 2-keto-4-hydroxyglutarate aldolase, purification and properties, *Maitra and Dekker*, 1485
—; lactate dehydrogenase, kinetics and specificity, *Anderson, Florini, and Vestling*, 2991
—; long chain fatty acids, ω-oxidation, *Preiss and Bloch*, 85
—; metabolism of enantiomorphic monotritiated primary carbinols of fructose 6-phosphate, *Bloom*, 2102
—; microsomes, glucose 6-phosphatase, inorganic pyrophosphatase, and pyrophosphate-glucose phosphotransferase, kinetic studies, *Arion and Nordlie*, 2752
—; —, inorganic pyrophosphate phosphotransferase, *Stetten*, 3576
—; mitochondria, effects of nutritional deficiency of unsaturated fats, respiratory control and adenosine triphosphate-inorganic orthophosphate exchange activity, *Ito and Johnson*, 3201
—; —, oxidation and phosphorylation reactions, albumin antagonism of fatty acid effects, *Björntrop, Ells, and Bradford*, 339
—; —, oxidation of choline, *Bianch and Azzone*, 3947
—; —, soluble fractions, ^{32}P and ^{18}O exchange reactions, *Falcone and Witonsky*, 1954
—; —, stoichiometry of respiratory stimulation, Ca^{++} and phosphate accumulation, and oxidative phosphorylation, *Rossi and Lehninger*, 3971
—; —, sulfhydryl groups, changes during swelling and contraction, *Riley and Lehninger*, 2083
—; normal and pancreatectomized, glyceride-glycerol synthesis *in vitro*, *Chernick and Scow*, 2416
—; protein, glucosamine-^{14}C incorpo-

Liver—*Continued*
ration, glycoprotein biosynthesis, *Robinson, Molnar, and Winzler,* 1134
Rat; pyridine nucleotide metabolism, pituitary influence, *Greengard, Quinn, and Reid,* 1887
—; regenerating, characterization of nuclei, radioisotope incorporation into deoxyribonucleic acid *in vivo*, *Niehaus and Barnum,* 1198
—; —, partially purified enzyme, incorporation of deoxynucleoside 5′-triphosphates into deoxyribonucleic acid, *Mantsavinos,* 3431
—; regulation of enzymes by natural components of diet, *Pérez, Clark-Turri, Rabajille, and Niemeyer,* 2420
—; uridine diphosphate glucose-glycogen glucosyltransferase synthesis, insulin administration, alloxan diabetes, *Steiner and King,* 1292
Regeneration, molecular mechanism, effect of puromycin on deoxyribonucleic acid synthesis, *Gottlieb, Fausto, and Van Lancker,* 555
Ribonucleic acid, dihydrouridine monophosphate and uridine monophosphate incorporation, *Carr and Grisolia,* 160
Thyroxine-treated tadpoles, carbamyl phosphate synthetase synthesis, *Tatibana and Cohen,* 2905
Lotaustralin: Biosynthesis, labeling studies *in vivo* with *Linum usitatissimum, Butler and Conn,* 1674
Lung: Guinea pig; metabolism of prostaglandin E_1, structures of two metabolites, *Änggård and Samuelsson,* 4097
Microsomes, activity in blood coagulation, *Williams,* 933
Luteinizing hormone: Luteal phosphorylase activation by, *Marsh and Savard,* 1
Lyase: L-Cysteine sulfoxide. *See* Cysteine sulfoxide lyase
Isocitrate. *See* Isocitrate lyase
Lymphoid tissue: Glucose metabolism, effects of cortisol, *Blecher,* 1299
Lysinase: ε-Alkyl-. *See* ε-Alkyllysinase
Lysine: L-; -adding enzyme, purification and properties, peptide synthesis in bacterial uridine nucleotides, *Ito and Strominger,* 210
N^{ϵ}-(DL-2-Amino-2-carboxyethyl)-L-; new amino acid formed on alkaline treatment of proteins, *Bohak,* 2878
Biosynthesis in yeast, new α-amino-
Lysine—*Continued*
adipic acid metabolite, *Kuo, Saunders, and Broquist,* 508
Hydroxylysine and, relationships in *Streptococcus faecalis* and *Leuconostock mesenteroides, Smith and Henderson,* 1867
Polylysine and, copolymers, inhibition of cytochrome oxidase activity, influences of polar and apolar residues, *Person, Zipper, Fine, and Mora,* 4159
Lysine-vasopressin: Dimer, biological and chemical properties, *Schally and Guillemin,* 1038
Lysophosphatidylinositol: Enzymatic acylation, *Keenan and Hokin,* 2123
Lysozyme: Alanine-containing glucosaminylmuramic acid derivative from streptococcal glycopeptide, characterization, *Heymann, Manniello, and Barkulis,* 2981
Disulfide bonds, interaction with phosphorothioate, *Neumann, Goldberger, and Sela,* 1536
Physical studies, pH-dependent dimerization, *Sophianopoulos and Van Holde,* 2516
Reactivation catalyzed by microsomal enzyme system, purification and properties, *Goldberger, Epstein, and Anfinsen,* 1406
Transglycosylation reaction, catalysis, *Sharon and Seifter,* PC2398

M

Macroions: Interactions involving cytochrome system components, influences of polar and apolar residues on polylysine and lysine copolymer inhibitions of cytochrome oxidase activity, *Person, Zipper, Fine, and Mora,* 4159
Magnesium ions: Activation of mitochondrial adenosine triphosphatase, kinetic studies, *Ulrich,* 3532
Calcium ions and, accumulation by isolated mitochondria, cation and anion balance, *Carafoli, Rossi, and Lehninger,* 3055
Maleimide: *N*-Ethyl-; reaction with intact erythrocytes, *Morell, Ayers, Greenwalt, and Hoffman,* 2696
—; reaction with modified human hemoglobin, *Guidotti and Konigsberg,* 1474
Malic dehydrogenase: Lactic dehydrogenase and, multiple molecular forms during development, *Wiggert and Villee,* 444
Malonate: 2-Methyl-; propionate and, precursors of C_{21} branched chain lactone in erythromycin, comparison, antibiotic glycosides, *Friedman, Kaneda, and Corcoran,* 2386
Mammary gland: Pregnant rats, localization of progesterone-7-^{3}H, *Lawson and Pearlman,* 3226
Rat; amino acid carbon incorporation into proteins, fatty acids, and carbon dioxide, effect of glucose, *Abraham, Madsen, and Chaikoff,* 855
—; lactating, glutamate carbon conversion to fatty acid carbon via citrate, influence of glucose, *Madsen, Abraham, and Chaikoff,* 1305
Manganous ion: Yeast hexokinase reaction, kinetics and mechanism, *Zewe, Fromm, and Fabiano,* 1625
Mannose: Guanosine diphosphate α-D-. *See* Guanosine diphosphate α-D-mannose
Mannosides: Myo-inositol; glycolipids of *Mycobacterium tuberculosis* and *Mycobacterium phlei,* structural studies, *Lee and Ballou,* 1316
Mannuronate: Guanosine diphospho-; biosynthesis in *Arthrobacter, Preiss,* 3127
Mannuronic acid: Guanosine diphosphate D-; isolation from marine brown alga, *Fucus gardneri* Silva, *Lin and Hassid,* PC944
Mercaptalbumin(s): Human and bovine; amino acid composition, *Spahr and Edsall,* 850
—; mercury dimers, crystallization, *Hughes and Dintzis,* 845
Mercurials: Organic; dihydrofolic reductase activation, *Kaufman,* PC669
Mercuric salts: Guanine oligoribonucleotide aggregation, *Lipsett,* 1250
Mercury: Dimers, mercaptalbumin, human and bovine, crystallization, *Hughes and Dintzis,* 845
Meromyosins: Molecular weight, Archibald experiments, increasing speed of rotations, *Mueller,* 797
Relationship to molecular structure of myosin, *Young, Himmelfarb, and Harrington,* 2822
Metabolic control mechanisms: Glycolytic pathway, ascites cells, computer model, *Garfinkel and Hess,* 971

Metal ions: Divalent; activation of β-methylaspartase, *Williams and Selbin*, 1635
Metalloporphyrins: Porphyrins and, interaction with apocytochrome b_5, *Ozols and Strittmatter*, 1018
Methionine: Biosynthesis, avian liver, role of vitamin B_{12}, *Dickerman, Redfield, Bieri, and Weissbach*, 2545
—, *Saccharomyces cerevisiae*, partial purification and properties of *S*-adenosylmethionine : homocysteine methyltransferase, *Shapiro, Yphantis, and Almenas*, 1551
Formation from N^5-methyltetrahydrofolic acid, effect of vitamin B_{12} analogues, *Weissbach, Redfield, and Dickerman*, 146
L-; heat capacity and entropy, L-cystine and, transition of L-methionine near 305.5° K, *Hutchens, Cole, and Stout*, 591
Methyl group, biogenesis from intramolecularly labeled formaldehyde-$^{14}C,D_2$, *Rachele, White, and Grünewald*, 353
—, enzymatic synthesis, isolation of cobalamin-containing transmethylase (5-methyltetrahydrofolate-homocysteine) from mammalian liver, *Loughlin, Elford, and Buchanan*, 2888
Residue near active site of chymotrypsin, preferential oxidation, *Schachter and Dixon*, 813
Ribonuclease, alkylation in 8 M urea, *Stark and Stein*, 3755
Methyl acceptor ribonucleic acid: Association with ribosomes, *Comb*, PC3597
β-Methylaspartase: Activation by divalent metal ions, *Williams and Selbin*, 1635
Reaction mechanism, *Bright*, 2307
Methylation: Bases, ribosomal ribonucleic acid, *Escherichia coli* K12 W-6, *Starr and Fefferman*, 3457
Soluble ribonucleic acid bases, role in biological activity, *Peterkofsky, Jesensky, Bank, and Mehler*, 2918
***O*-Methylation:** Enzymatic; iodinated phenols and thyroid hormones, *Tomita, Cha, and Lardy*, 1202
5,10-Methylenetetrahydrofolic dehydrogenase: Bakers' yeast; stereospecificity of hydrogen transfer, *Ramasastri and Blakley*, 112
—; tetrahydrofolic acid assay, *Ramasastri and Blakley*, 106
Methyl esters: Oligogalacturonide; elim-
Methyl esters—*Continued*
inative cleavage, pectin *trans*-eliminase, *Edstrom and Phaff*, 2409
Methyl group: Choline, biogenesis from intramolecularly labeled formaldehyde-$^{14}C,D_2$, *Rachele, White, and Grünewald*, 353
Methionine, biogenesis from intramolecularly labeled formaldehyde-$^{14}C,D_2$, *Rachele, White, and Grünewald*, 353
—; enzymatic synthesis, isolation of cobalamin-containing transmethylase (5-methyltetrahydrofolate-homocysteine) from mammalian liver, *Loughlin, Elford, and Buchanan*, 2888
Transfer from 5,6-dimethylbenzimidazolylcobamide methyl (methyl-B_{12}) to homocysteine, *Weissbach, Redfield, and Dickerman*, 1942
Methylmalonyl coenzyme A mutase: Direct hydrogen transfer, *Erfle, Clark, Nystrom, and Johnson*, 1920
Methylmalonyl isomerase: Purification and properties, propionibacteria, *Kellermeyer, Allen, Stjernholm, and Wood*, 2562
Methyl sulfate: *N*-Methylphenazinium; pyocyanine and, spectroscopic characteristics and chemical properties, semiquinoid oxidation level, *Zaugg*, 3964
5-Methyltetrahydrofolate-homocysteine transmethylase: Cobalamin-containing, isolation from mammalian liver, enzymatic synthesis of methionine methyl group, *Loughlin, Elford, and Buchanan*, 2888
Methyltransferase: *S*-Adenosylmethionine:homocysteine. *See S*-Adenosylmethionine:homocysteine methyltransferase
Phosphatidylethanolamine *N*-. *See* Phosphatidylethanolamine *N*-methyltransferase
Mevalonic acid: Biosynthesis, enzyme-bound intermediates, *Brodie, Wasson, and Porter*, 1346
Micrococcus lysodeikticus: Geranylgeranyl pyrophosphate synthetase, purification, *Kandutsch, Paulus, Levin, and Bloch*, 2507
Polynucleotide phosphorylase, guanosine diphosphate as substrate and inhibitor, *Brenneman and Singer*, 893
Ribonucleic acid polymerase, enzymatic synthesis of ribonucleic
Micrococcus lysodeikticus—*Continued*
acid, *Nakamoto, Fox, and Weiss*, 167
Ribonucleic acid polymerase, deoxyribonucleic acid-primed reaction, enzymatic synthesis of ribonucleic acid, *Fox and Weiss*, 175
—, ribonucleic acid-primed reaction, enzymatic synthesis of ribonucleic acid, *Fox, Robinson, Haselkorn, and Weiss*, 186
Microsomes: Brain; α-hydroxy acid decarboxylase, *Levis and Mead*, 77
Liver; synthesis of vitamin A ester, *Futterman and Andrews*, 4077
Lung; activity in blood coagulation, *Williams*, 933
Thyroxine degradation, β-phenyl ring product, *Wynn and Gibbs*, 527
Vitamin A esterification in visual cycle, metabolism of retina, *Andrews and Futterman*, 4073
Milk: Bovine; lactose-synthesizing enzyme, *Babad and Hassid*, PC946
Mitochondria: Adenosine triphosphatase, activation by Mg^{++}, kinetic studies, *Ulrich*, 3532
Contraction, requirement for phosphatidylinositol, *Vignais, Vignais, and Lehninger*, 2011
Fatty acid biosynthesis, stimulatory effect, *Bhaduri and Srere*, 1357
Heart; acid-nonextractable flavin determination, *Wilson and King*, 2683
—; aged preparations, restoration of adenosine triphosphate-supported Ca^{++} accumulation, *Brierley, Murer, and Bachman*, 2706
—; iron, copper, cytochrome, and lipid contents, *King, Nickel, and Jensen*, 1989
—; reduced diphosphopyridine nucleotide oxidase, mechanism of stimulation by soluble cytochrome *c*, *Camerino and Smith*, 2345
Isolated; active accumulation of Ca^{++} and Mg^{++}, cation and anion balance, *Carafoli, Rossi, and Lehninger*, 3055
Liver; guanosine triphosphate-specific thiokinase, activation of fatty acids, *Rossi and Gibson*, 1694
—; isolated, action of gramicidin D, *Weinstein, Scott, and Hunter*, 3031
—; —, ascorbate-induced swelling and lysis, *Hunter, Scott, Hoffsten, Guerra,*

Mitochondria—*Continued*
Weinstein, Schneider, Schutz, Fink, Ford, and Smith, 604
Liver; isolated, effect of exposure to mixed oxidized and reduced glutathione on swelling, lysis, and disintegration, *Hunter, Scott, Hoffsten, Gebicki, Weinstein, and Schneider,* 614
Mammalian; free and complexed forms of lipoyl dehydrogenase, *Lusty and Singer,* 3733
Phospholipids, palmitate incorporation, effect of carnitine, *Bressler and Friedberg,* 1364
Plant; protein synthesis, amino acid incorporation in peptide linkage, *Das, Chatterjee, and Roy,* 1126
Pretreated; contraction, requirement of heat-stable factor, *Vignais, Vignais, and Lehninger,* 2002
Primate liver; oxidation of *N*-methylglycines, assay, purification, and characterization of sarcosine dehydrogenase, *Hoskins and Bjur,* 1856
Rat brain; pyruvate utilization, *Deitrich and Hellerman,* 2735
Rat liver; effects of nutritional deficiency of unsaturated fats, respiratory control and adenosine triphosphate-inorganic orthophosphate exchange activity, *Ito and Johnson,* 3201
—; oxidation and phosphorylation reactions, albumin antagonism of fatty acid effects, *Björntrop, Ells, and Bradford,* 339
—; oxidation of choline, *Bianchi and Azzone,* 3947
—; ^{32}P and ^{18}O exchange reactions, *Falcone and Witonsky,* 1954
—; stoichiometry of respiratory stimulation, Ca^{++} and phosphate accumulation, and oxidative phosphorylation, *Rossi and Lehninger,* 3971
—; sulfhydryl groups, changes during swelling and contraction, *Riley and Lehninger,* 2083
Swelling, disintegration and, determination with electronic particle counter, *Gebicki and Hunter,* 631
—, lipid peroxide formation and, effect of phosphate and arsenate, oxidized and reduced glutathione, *Hunter, Scott, Weinstein, and Schneider,* 622
—, orthophosphate-induced, acid pH, effect of adenosine triphosphate and substrate, *Connelly and Lardy,* 3065
Mitomycin C: Lysogenic induction, effect on deoxyribonucleic acid polymerase of *Escherichia coli* K12λ, *Pricer and Weissbach,* 2607
Molecular weight: Distribution of chondroitin sulfate B, determination by sedimentation equilibrium, *Tanford, Marler, Jury, and Davidson,* 4034
Polypeptide chains of L-glutamate dehydrogenase, *Marler and Tanford,* 4217
Monoglyceride-specific lipase: Activity, adipose tissue, *Vaughan, Berger, and Steinberg,* 401
Mucopolysaccharide(s): Composition, aorta and cartilage, copper-deficient swine, *Linker, Coulson, and Carnes,* 1690
Threonine and serine linkages, *Anderson, Seno, Sampson, Riley, Hoffman, and Meyer,* PC2716
Muralysin: Streptococcal bacteriophage; purification and properties, *Barkulis, Smith, Boltralik, and Heymann,* 4027
Muramic acid: Glucosaminyl-; alanine-containing derivative, liberated by lysozyme from streptococcal glycopeptide, characterization, *Heymann, Manniello, and Barkulis,* 2981
Muramidase (lysozyme): Physical studies, pH-dependent dimerization, *Sophianopoulos and Van Holde,* 2516
Muscle: Acetoacetic acid metabolism, effect of insulin and deprivation of food, *Beatty, Peterson, Bocek, and West,* 2106
Contraction, effect on phosphofructokinase activity, frog skeletal muscle, *Özand and Narahara,* 3146
Glycogenolysis, regulation, control of glycogen phosphorylase activity, *Morgan and Parmeggiani,* 2440
—, —, control of glycogen phosphorylase reaction, isolated perfused heart, *Morgan and Parmeggiani,* 2435
Glycolysis, regulation, conversion of phosphorylase *b* to *a* in frog sartorius, *Danforth and Helmreich,* 3133
—, —, effect of insulin, epinephrine, and contraction on phosphofructokinase activity in frog skeletal muscle, *Özand and Narahara,* 3146
Glycolysis, regulation, effect of stimulation and epinephrine in frog sartorius, *Karpatkin, Helmreich, and Cori,* 3139
Hexose synthesis, glycerol-3-^{3}H,1,3-^{14}C, *Bloom and Foster,* 967
Intestinal smooth; glycogen phosphorylase *b*, tissue specificity, *Bueding, Kent, and Fisher,* 2099
Mouse; isolated, tetanic contraction, glycogenolysis, presence and absence of phosphorylase *a*, *Danforth and Lyon,* 4047
Phosphorylase, interaction with soluble antibody fragments, *Michaelides, Sherman, and Helmreich,* 4171
Rabbit; aldolase, carboxyl- and amino-terminal residues, *Winstead and Wold,* 4212
—; lactate dehydrogenase, equilibrium reaction rate and mechanism, *Silverstein and Boyer,* 3901
Sugar transport, mobile, carrier-mediated, identification, *Morgan, Regen, and Park,* 369
Mutarotases: Kinetics and distribution, relation to sugar transport, *Keston,* 3241
Mutase: Glutamate. *See* Glutamate mutase
Methylmalonyl coenzyme A. *See* Methylmalonyl coenzyme A mutase
Mycobacteria: 6-*O*-Methyl-D-glucose, *Lee and Ballou,* PC3602
Mycobacterium phlei: Glycolipids, myo-inositol mannosides, *Lee and Ballou,* 1316
Respiratory chains, oxidative phosphorylation in fractionated bacterial systems, *Asano and Brodie,* 4280
Δ^9-Unsaturated fatty acids, cofactor requirements, *Fulco and Bloch,* 993
Mycobacterium tuberculosis: Glycolipids, myo-inositol mannosides, *Lee and Ballou,* 1316
Transglucosylase inhibitor, purification and properties, *Lornitzo and Goldman,* 2730
Myoglobin: Apo-; sperm whale, heme binding, changes in side chain reactivity, *Breslow,* 486
Derivatives, serum albumin and, comparison of cupric ion-binding sites, *Breslow,* 3252

Myoglobin—*Continued*
Met-; sperm whale, carboxymethylation, reactivity of adjacent histidine residues, *Banaszak and Gurd*, 1836
Oxy-; preparation of crystalline form from horse heart, *Yamazaki, Yokota, and Shikama*, 4151
Myo-inositol mannosides: Glycolipids of *Mycobacterium tuberculosis* and *Mycobacterium phlei*, structural studies, *Lee and Ballou*, 1316
Myokinase. *See* Adenosine triphosphate-adenosine 5′-phosphate transphosphorylase
Myometrium: Human; estrogen-dependent pyridine nucleotide transhydrogenase, *Abe, Hagerman, and Villee*, 414
Myosin: Dog heart; characterization, *Mueller, Franzen, Rice, and Olson*, 1447
—; macromolecular fragments from tryptic digestion, *Mueller, Theiner, and Olson*, 2153
Molecular structure, relationship to meromyosins, *Young, Himmelfarb, and Harrington*, 2822
Molecular weight, Archibald experiments, increasing speed of rotations, *Mueller*, 797
Pyrophosphate and adenosine triphosphate binding, *Martonosi and Meyer*, 640
Myosin A: Disulfide-sulfhydryl interchange, *Stracher*, 1118
Myosin adenosine triphosphatase: Activation, γ-(*p*-arsenosophenyl)-*n*-butyrate, *Blum and Sanadi*, 455
—, carbonyl cyanide *p*-chlorophenylhydrazone, *Blum and Sanadi*, 452

N

Naphthalenesulfonyl: 5-Dimethylamino-1-; ribonuclease derivatives, reduction and air oxidation, *White*, 1032
1,4-Naphthohydroquinone diphosphate: 2-Methyl-; nonenzymic oxidation, accompanying phosphorylation reaction, *Tomasi and Dallam*, 1604
Neurospora: Cystathionine cleavage enzymes, *Flavin and Slaughter*, 2212
Cystathionine γ-cleavage enzyme, purification and properties, *Flavin and Segal*, 2220
Neurospora crassa: Mutant strains, phospholipid variations, *Crocken and Nyc*, 1727
Tryptophan synthetase, aldolytic activity, role of pyridoxal phosphate, *Carsiotis and Suskind*, 4227
Nicotinamide: N^1-Methyl-; cation and analogues, reactions with dilute alkali, *Martin and Hull*, 1237
Nicotinamide adenine dinucleotide: Biosynthesis, *Bacillus subtilis*, regulation, enzyme repression, *Gholson and Kori*, PC2399
—, regulation by adenosine triphosphate, *Nakamura, Nishizuka, and Hayaishi*, PC2717
Carbonyl addition, frozen solution, spectral, fluorometric, and optical rotatory properties of oxidized acetone adduct, *Dolin and Jacobson*, 3007
Crystallization, *Winer*, PC3598
Reduced; reaction with lactate dehydrogenase, chemical relaxation, fluorescence detection, *Czerlinski and Schreck*, 913
Synthesis *in vitro*, ascites cells, *Dietrich and Fuller*, 1653
Nicotinamide adenine dinucleotide dehydrogenase: Reduced; respiratory chain-linked, beef heart, purification and properties, *Cremona and Kearney*, 2328
Nicotinamide adenine dinucleotide glycohydrolase: Mouse Ehrlich ascites cells, properties, *Green and Bodansky*, 2613
Nicotinamide adenine dinucleotide phosphate: Reduced; -linked phosphorylation, fractionated bacterial systems, *Murthy and Brodie*, 4292
Nicotinamide adenine dinucleotide-specific isocitric dehydrogenase: Possible regulatory protein, *Sanwal, Zink, and Stachow*, 1597
Nicotine: Mammalian metabolism, possible intermediary role of γ-(3-pyridyl)-γ-hydroxybutyric acid, *McKennis, Schwartz, Turnbull, Tamaki, and Bowman*, 3981
Pyrrolidine ring, metabolic degradation, alternate routes, *McKennis, Schwartz, and Bowman*, 3990
Nicotinic acid: Metabolism, distribution of isotope from labeled nicotinic acid in fermentation products, *Pastan, Tsai, and Stadtman*, 902
Oxidation pathway, *Bacillus* species, *Ensign and Rittenberg*, 2285
Nicotinic acid mononucleotide: Quinolinate conversion to, enzymatic, mammalian liver, *Gholson, Ueda, Ogasawara, and Henderson*, 1208
Nitrate: Dimethylbiacridylium; hydrogen transfer, hypoxanthine, kinetics, chick liver xanthine dehydrogenase, *De Angelis and Totter*, 1012
Nitrilase: Ricinine. *See* Ricinine nitrilase
Nitrite: Reduction, light and dark, reconstituted enzymatic system, *Paneque, Ramirez, Del Campo, and Losada*, 1737
Nitrogen: Amino; catabolism *in vivo*, high protein intake, *Wergedal and Harper*, 1156
Nitro-reductase: *Nocardia V*, purification, *Villanueva*, 773
Nocardia V: Nitro-reductase, purification, *Villanueva*, 773
Nonpolar substances: Protein structural changes, reversible, induction, *Wetlaufer and Lovrien*, 596
Norepinephrine: Biosynthesis, initial step, tyrosine hydroxylase, *Nagatsu, Levitt, and Udenfriend*, 2910
Norleucine: 4-Oxo-; synthesis, comparison with amino acid from *Citrobacter freundii, Barry and Roark*, 1541
Novikoff hepatoma: Cytidine diphosphate reductase, enzymatic synthesis of deoxyribonucleotides, *Moore and Reichard*, 3453
Nuclease: Purified micrococcal; use in identifying nucleotide terminus bearing free 5′-monophosphate, *Ohsaka, Mukai, and Laskowski*, 3498
Nucleoside deoxyribosyltransferase: Normal and malignant tissues, deoxyribosyl transfer, *Zimmerman and Seidenberg*, 2618
Nucleoside phosphates: Ferric iron compounds with, *Goucher and Taylor*, 2251
Nucleoside:pyrimidine deoxyribosyltransferase: Activity, three partially purified thymidine phosphorylases, deoxyribosyl transfer, *Zimmerman*, 2622
Nucleoside triphosphate-nucleoside diphosphate transphosphorylase (nucleoside diphosphokinase): Isolation in crystalline form from

XUM

Nucleoside triphosphate-nucleoside diphosphate transphosphorylase (nucleoside diphosphokinase)—*Continued:*
brewers' yeast, *Ratliff, Weaver, Lardy, and Kuby,* 301
3′-Nucleotidase: Activity, new cyclic phosphodiesterase from *Escherichia coli* B, purification and properties, *Anraku,* 3412
—, —, substrate specificity and mode of action, *Anraku,* 3420
Nucleotide(s): Free 5′-monophosphate-bearing terminus, identification with use of purified micrococcal nuclease, *Ohsaka, Mukai, and Laskowski,* 3498
Pyridine. *See* Pyridine nucleotides
Uridine. *See* Uridine nucleotides
Sugar; reactions in *Arthrobacter,* biosynthesis of guanosine diphosphomannuronate, *Preiss,* 3127
—; —, purification and properties of guanosine diphosphate mannose pyrophosphorylase, *Preiss and Wood,* 3119
Nucleotide sugars: ^{4}C- and ^{3}H-labeled, ^{4}C and ^{3}H incorporation into polysaccharide, cell-free cartilage preparation, *Silbert,* 1310

O

^{18}**O:** Exchange reactions, rat liver mitochondria, soluble fractions, *Falcone and Witonsky,* 1954
Octadecadienoic acid: *cis* and *trans* isomers, ^{14}C-labeled, metabolism, *Ono and Fredrickson,* 2482
Octadecenoic acid: *cis* and *trans* isomers, ^{14}C-labeled, metabolism, *Ono and Fredrickson,* 2482
Octanoate: ω-Oxidation, products, *Kusunose, Kusunose, and Coon,* 1374
Oligogalacturonide: Methyl esters, eliminative cleavage, pectin *trans*-eliminase, *Edstrom and Phaff,* 2409
Oligosaccharase: Activity, β-*N*-acetyl-D-glucosaminidase of beef liver, *Weissmann, Hadjiioannou, and Tornheim,* 59
Ornithine: D-; constituent of bacterial cell wall, *Duc-Nguyen and Weed,* 3372
Ornithine δ-transaminase: Induction, oral intubation of casein hydrolysate, rat liver, *Pitot and Peraino,* 1783
Threonine dehydrase and, dietary and hormonal induction, carbohydrate repression, rat liver, *Peraino and Pitot,* 4308
Orotic acid: -Decarboxylating enzymes, calf thymus, purification and properties, *Kasbekar, Nagabhushanam, and Greenberg,* 4245
Lipoprotein secretion, rat liver, induction of inhibition, reversal by adenine, *Windmueller,* 530
Orthophosphate: Accumulation in rat liver mitochondria, stoichiometry with respiratory stimulation, Ca^{++} accumulation, and oxidative phosphorylation, *Rossi and Lehninger,* 3971
-Adenosine triphosphate exchange, activity and respiratory control, rat liver mitochondria, effects of nutritional deficiency of unsaturated fats, *Ito and Johnson,* 3201
—, reaction, effect of parathyroid hormone interaction with oxidative phosphorylation chain, *Sallis and DeLuca,* 4303
-Induced mitochondrial swelling, acid pH, effect of adenosine triphosphate and substrate, *Connelly and Lardy,* 3065
^{32}P-Labeled, incorporation into phospholipid of brain particulate preparations, acetylcholine stimulation, *Durell and Sodd,* 747
Specific precipitation, biochemical applications, *Sugino and Miyoshi,* 2360
Ovarian tissue: Human; steroid sulfate biosynthesis, *Wallace and Silberman,* 2809
Oxalate: Effect on actions of human brain, liver, and heart lactic dehydrogenase variants on nucleotide and substrate analogues, *Nisselbaum, Packer, and Bodansky,* 2830
Oxamate: Effect on actions of human brain, liver, and heart lactic dehydrogenase variants on nucleotide and substrate analogues, *Nisselbaum, Packer, and Bodansky,* 2830
Oxidase: Aldehyde. *See* Aldehyde oxidase
Amine. *See* Amine oxidase
Ascorbate. *See* Ascorbate oxidase
Cytochrome. *See* Cytochrome oxidase
Cytochrome *c*. *See* Cytochrome *c* oxidase
Oxidase—*Continued*
Ethanolamine. *See* Ethanolamine oxidase
Glucose. *See* Glucose oxidase
p-Hydroxyphenylpyruvate. *See p*-Hydroxyphenylpyruvate oxidase
Phenylpyruvate. *See* Phenylpyruvate oxidase
Reduced diphosphopyridine nucleotide. *See under* Diphosphopyridine nucleotide oxidase
Succinate. *See* Succinate oxidase
Xanthine. *See* Xanthine oxidase
Oxidation: Reactivation of reduced ribonuclease, *Givol, Goldberger, and Anfinsen,* PC3114
Oxidation-reduction potentials: Heme proteins, human hemoglobin, *Antonini, Wyman, Brunori, Taylor, Rossi-Fanelli, and Caputo,* 907
—, —, carboxypeptidase digests, *Brunori, Antonini, Wyman, Zito, Taylor, and Rossi-Fanelli,* 2340
Oxidative phosphorylation: Fractionated bacterial systems, reduced nicotinamide adenine dinucleotide phosphate-linked phosphorylation, *Murthy and Brodie,* 4292
—, respiratory chains of *Mycobacterium phlei, Asano and Brodie,* 4280
Oxidative phosphorylation chain: Parathyroid hormone interaction, effect on adenosine triphosphatase activity and adenosine triphosphate-orthophosphate exchange reaction, *Sallis and DeLuca,* 4303
Oxygen: Ceruloplasmin, blue color, *Morell, Aisen, Blumberg, and Scheinberg,* 1042
-Sensitive reactions of proteins and peptides, color reaction of fully combined cystine, *Gustus,* 115
—, reactive base, *Gustus,* 1114
Oxytocin: 5-Alanine-; synthesis and pharmacological study, *du Vigneaud, Denning, Drabarek, and Chan,* 472
4-α-Aminobutyric acid-; synthesis and pharmacological study, *du Vigneaud, Denning, Drabarek, and Chan,* 472
4-Decarboxamido- (4-α-aminobutyric acid-); synthesis and pharmacological study, *du Vigneaud, Denning, Drabarek, and Chan,* 472
5-Decarboxamido- (5-alanine-); synthesis and pharmacological study, *du Vigneaud, Denning, Drabarek, and Chan,* 472

P

^{32}P: Exchange reactions, rat liver mitochondria, soluble fractions, *Falcone and Witonsky*, 1954

Palmitate: Incorporation into mitochondrial phospholipids, effect of carnitine, *Bressler and Friedberg*, 1364

Palmitic acid: Biosynthesis, enzyme-bound intermediates, *Brodie, Wasson, and Porter*, 1346

Pancreatectomy: Glyceride-glycerol synthesis *in vitro*, rat liver, *Chernick and Scow*, 2416

Papain: Cleavage of rabbit γ-globulin, isolation of new intermediate, *Nelson*, 3727

Parathyroid: Polypeptides, isolation and characterization, *Rasmussen, Sze, and Young*, 2852

Parathyroid hormone: Interaction with oxidative phosphorylation chain, effect on adenosine triphosphatase activity and adenosine triphosphate-orthophosphate exchange reaction, *Sallis and DeLuca*, 4303

Pectin: Eliminative cleavage, pectin *trans*-eliminase, *Edstrom and Phaff*, 2409

Pectin *trans*-eliminase: *Aspergillus fonsecaeus*, purification and certain properties, *Edstrom and Phaff*, 2403

Eliminative cleavage of pectin and oligogalacturonide methyl esters, *Edstrom and Phaff*, 2409

Pepsin: Bovine serum albumin fragmentation, isolation, amino acid composition, and physical properties of fragments, *Weber and Young*, 1424

—, origin of expansion of albumin molecule in acid, *Weber and Young*, 1415

Pepsinogen: Phenolic hydroxyl ionization, *Perlmann*, 3762

Peptide(s): Bacterial uridine nucleotides, enzymatic synthesis, purification and properties of L-lysine-adding enzyme, *Ito and Strominger*, 210

Linkage, amino acid incorporation, protein synthesis in plant mitochondria, *Das, Chatterjee, and Roy*, 1126

Oxygen-sensitive reactions, proteins, color reaction of fully combined cystine, *Gustus*, 115

—, —, reactive base, *Gustus*, 1114

Peptide(s)—*Continued*

Ribonuclease S-; limited carboxypeptidase degradation, effects of changes in primary structure on enzymatic activity, *Potts, Young, Anfinsen, and Sandoval*, 3781

Sheep pituitary gland, new, biologically active, *Birk and Li*, 1048

Peptide bonds: Specific cleavage, approach, based on hydrogen fluoride-induced nitrogen to oxygen acyl shift, *Lenard and Hess*, 3275

Periodate: Oxidation, fetuin, *Spiro*, 567

—, nucleotide sequence analysis of polyribonucleotides, *Neu and Heppel*, 2927

Peroxidase: Action, proposed mechanism, kinetic comparison of luminescent and nonluminescent peroxidation reactions, bioluminescence of *Balanoglossus biminiensis* extract, *Dure and Cormier*, 2351

Iodide. *See* Iodide peroxidase

Peroxide: Lipid; formation, mitochondria, effect of phosphate and arsenate, oxidized and reduced glutathione, *Hunter, Scott, Weinstein, and Schneider*, 622

pH: Acid; orthophosphate-induced mitochondrial swelling, effect of adenosine triphosphate and substrate, *Connelly and Lardy*, 3065

Cytochrome *a*-borohydride reaction, effect, studies on electron transport system, *Tzagoloff and Wharton*, 582

-Dependent transitions, deuterium-hydrogen exchange analysis, bovine plasma albumin, *Benson, Hallaway, and Lumry*, 122

Dimerization of lysozyme, *Sophianopoulos and Van Holde*, 2516

Environmental; glycerol metabolism, rat liver, *in vitro*, *Longmore, Hastings, and Mahowald*, 1700

Fatty acid oxidation, effect on rate, rat liver preparations, *Ontko and Jackson*, 3674

Synthetic polypeptide antigen-antibody interaction, antibody activity, *Gould, Gill, and Kunz*, 3071

Xanthine oxidase, substrate specificity, *Greenlee and Handler*, 1090

Phenazine methosulfate. *See* Methyl sulfate

Phenols: Iodinated; enzymatic *O*-methylation, *Tomita, Cha, and Lardy*, 1202

Phenols—*Continued*

Phenylalanine: Administration, anomalous behavior of plasma albumin tyrosine derived from, *Ito, Guroff, and Udenfriend*, 3385

Hydroxylation, primary oxidation product of tetrahydropteridines, *Kaufman*, 332

Phenylpyruvate oxidase: Side chain rearrangement, comparison with *p*-hydroxyphenylpyruvate oxidase, *Taniguchi, Kappe, and Armstrong*, 3389

Phosphatase: Alkaline. *See* Alkaline phosphatase

Glucose 6-. *See* Glucose 6-phosphatase

Sialic acid. *See* Sialic acid 9-phosphatase

Phosphatase-exonuclease: Deoxyribonucleic acid. *See* Deoxyribonucleic acid phosphatase-exonuclease

Phosphate: High energy; formation, heart homogenates, normal and alloxan-diabetic rats, *Haugaard and Haugaard*, 705

Mitochondrial swelling and lipid peroxide formation, oxidized and reduced glutathione, *Hunter, Scott, Weinstein, and Schneider*, 622

Phosphatidic acid: Aqueous dispersions, ionic properties, *Abramson, Katzman, Wilson, and Gregor*, 4066

Synthesis, salt gland homogenates, *Hokin and Hokin*, 2116

Phosphatidylethanolamine *N*-methyltransferase: Purification and properties, phosphatidylcholine synthesis in *Agrobacterium tumefaciens*, *Kaneshiro and Law*, 1705

Phosphodiesterase: Cyclic; new, with 3′-nucleotidase activity, from *Escherichia coli* B, purification and properties, *Anraku*, 3412

—, —, —, —, substrate specificity and mode of action, *Anraku*, 3420

Exonuclease I, *Escherichia coli* deoxyribonucleases, specificity, *Lehman and Nussbaum*, 2628

Spleen; action on yeast soluble ribonucleic acid, *Clark, Eyzaguirre, and Gunther*, 1877

Phosphofructokinase: Activity, frog skeletal muscle, effect of insulin, epinephrine, and contraction, *Özand and Narahara*, 3146

—, perfused rat heart, effect of

Phosphofructokinase—*Continued*
ionic composition, glycolysis adjustment to energy utilization, *Regen, Young, Davis, Jack, and Park,* 381
Heart muscle, effects of alloxan diabetes, growth hormone, cortisol, and anoxia, *Regen, Davis, Morgan, and Park,* 43
Yeast; kinetics, effect of adenylate, *Ramaiah, Hathaway, and Atkinson,* 3619
Phosphoglucomutase: *Escherichia coli;* purification and properties, *Joshi and Handler,* 2741
Pathway, kinetic study, *Ray and Roscelli,* 1228
—, phospho-enzyme isomerization, *Ray and Roscelli,* 3935
6-Phosphogluconic dehydrase: Mechanism, *Meloche and Wood,* 3505
Phosphoglucose isomerase: Crystalline, isolation from rabbit muscle, *Noltmann,* 1545
Salmonella typhimurium mutant lacking, D-glucose metabolic pathways, *Fraenkel and Horecker,* 2765
3-Phosphoglyceraldehyde dehydrogenase: Esterolytic activity, mechanism and active site, *Olson and Park,* 2316
Phosphoinositides: Intact brain; ion exchange chromatography on diethylaminoethyl cellulose, gradient salt elution, mixed solvent system, *Hendrickson and Ballou,* 1369
Phospholipase: Hydrogen transfer between reduced diphosphopyridine nucleotide dehydrogenase and respiratory chain, *Minakami, Schindler, and Estabrook,* 2042
Phospholipid(s): Biosynthesis in *Escherichia coli, Kanfer and Kennedy,* 1720
Brain particulate preparations, ^{32}P-inorganic orthophosphate incorporation, acetylcholine stimulation, *Durell and Sodd,* 747
Changes during functional differentiation of adipose tissue, newborn rat, *Morrill and Rapport,* 740
Metabolism, vitamin D, *Thompson and DeLuca,* 984
Mitochondrial; palmitate incorporation, effect of carnitine, *Bressler and Friedberg,* 1364
Variations, mutant strains of *Neurospora crassa, Crocken and Nyc,* 1727
Phosphomonoester groups: Phosphorylation, amino acid acceptor ribonucleic acid, *RajBhandary, Young, and Khorana,* 3875
Phosphonic acid: Analogue of cephalin, synthesis, *Baer and Stanacev,* 3209
Phosphonolipids: Synthesis of phosphonic acid analogue of cephalin, *Baer and Stanacev,* 3209
Phosphorothioate: Interaction with disulfide bonds of ribonuclease and lysozyme, *Neumann, Goldberger, and Sela,* 1536
Phosphorylase: Glycogen. *See* Glycogen phosphorylase
HeLa cells, purification and properties, *Alpers and Schachter,* 3640
Luteal; activation by luteinizing hormone, *Marsh and Savard,* 1
Muscle; interaction with soluble antibody fragments, *Michaelides, Sherman, and Helmreich,* 4171
Polynucleotide. *See* Polynucleotide phosphorylase
Thymidine. *See* Thymidine phosphorylase
Uridine. *See* Uridine phosphorylase
Phosphorylase *a*: Formation from *b* form, frog sartorius muscle, *Danforth and Helmreich,* 3133
Glycogenolysis during tetanic contraction of isolated mouse muscles, *Danforth and Lyon,* 4047
Muscle; kinetics, effects of adenylic acid, *Lowry, Schulz, and Passonneau,* 1947
Phosphorylase *b*: Conversion to *a* form, frog sartorius muscle, *Danforth and Helmreich,* 3133
Glycogen. *See* Glycogen phosphorylase *b*
Phosphotransferase: Inorganic pyrophosphate. *See* Inorganic pyrophosphate phosphotransferase
Pyrophosphate. *See* Pyrophosphate phosphotransferase
Pyrophosphate-glucose. *See* Pyrophosphate-glucose phosphotransferase
Photophosphorylation: Hill reaction and, enhancement by carbon dioxide, *Punnett and Iyer,* 2335
Interaction with electron transport system in bacterial chromatophores, *Newton,* 3038
Pituitary: Pyridine nucleotide metabolism, rat liver, *Greengard, Quinn, and Reid,* 1887
Sheep; new, biologically active peptide, *Birk and Li,* 1048
Plasma: Amine oxidase, oxidation of spermine and spermidine, identification of aminoaldehydes, *Tabor, Tabor, and Bachrach,* 2194
Glycoprotein synthesis, livers of puromycin-treated rats, glucosamine intermediates, *Molnar, Robinson, and Winzler,* 3157
Hydroxyproline-containing, collagen-like protein, assay procedure, *LeRoy, Kaplan, Udenfriend, and Sjoerdsma,* 3350
Rat; protein, glucosamine-^{14}C incorporation, glycoprotein biosynthesis, *Robinson, Molnar, and Winzler,* 1134
Plasmalogen(s): Changes during functional differentiation of adipose tissue, newborn rat, *Morrill and Rapport,* 740
Clostridium butyricum; cyclopropane aldehyde, *Goldfine,* 2130
Plasminogen: Human; interaction with streptokinase, combining in ultracentrifuge under various conditions, *Davies, Englert, and De Renzo,* 2651
Interaction with streptokinase, functional properties of activated enzyme, *Markus and Werkheiser,* 2637
—, kinetics of activation, *Werkheiser and Markus,* 2644
Pleuropneumonia-like organisms: Arginine, pyrimidine precursor, strain L-929 fibroblasts, *McCarty, Woodson, Amstey, and Brown,* 544
Poly-α-amino acids: Antigenicity, quantitative relationships among polymers and rabbit antisera, *Maurer, Gerulat, and Pinchuck,* 922
Polycytidylic acid: Complex formation with guanine oligonucleotides, *Lipsett,* 1256
Polyglutamic acid compounds: Tetrahydropteroyl-; formation from tetrahydrofolic acid, enzymatic, *Griffin and Brown,* 310
Polyglycerophosphate: Synthesis of teichoic acids, *Burger and Glaser,* 3168
—, glucosylation, *Glaser and Burger,* 3187
Poly-L-leucine: Poly-L-valine and, sorption of hydrogen chloride and trifluoroacetic acid, *Brandt and Budrys,* 1442
Polylysine: Lysine and, copolymers, inhibition of cytochrome oxidase activity, influences of polar and

Polylysine—*Continued*
apolar residues, *Person, Zipper, Fine, and Mora,* 4159
Polymerase: *Bacillus subtilis,* purification and properties, enzymatic synthesis of deoxyribonucleic acid, *Okazaki and Kornberg,* 259
Deoxyribonucleic acid. *See* Deoxyribonucleic acid polymerase
Ribonucleic acid. *See* Ribonucleic acid polymerase
Polymyxin B: Biosynthesis, growing cultures of *Bacillus polymyxa, Paulus and Gray,* 865
Polymyxin D: Biosynthesis, effect of D-leucine, *DiGirolamo, Ciferri, DiGirolamo, and Albertini,* 502
Polynucleotide(s): Labeling of end groups, selective acetylation of terminal hydroxyl groups in deoxyribopolynucleotides, *Stuart and Khorana,* 3885
—, selective phosphorylation of phosphomonoester groups in amino acid acceptor ribonucleic acid, *RajBhandary, Young, and Khorana,* 3875
Polynucleotide phosphorylase: *Micrococcus lysodeikticus,* guanosine diphosphate as substrate and inhibitor, *Brenneman and Singer,* 893
Polypeptide(s): Antigenicity, quantitative relationships among polymers and rabbit antisera, *Maurer, Gerulat, and Pinchuck,* 922
Parathyroid; isolation and characterization, *Rasmussen, Sze, and Young,* 2852
Synthesis, subcellular system derived from L1210 mouse ascites leukemia, *Ochoa and Weinstein,* 3834
Synthetic; antigens, effects of pH, ionic strength, temperature, and nonaqueous solvents on antibody activity and antibody-synthetic polypeptide interaction, *Gould, Gill, and Kunz,* 3071
—; —, effects of variation in composition and chemical modification of synthetic polypeptides on antibody-synthetic polypeptide antigen interaction, *Gill, Gould, and Kunz,* 3083
—; optically isomeric, antigenicity, *Gill, Kunz, Gould, and Doty,* 1107
Polypeptide chains: L-Glutamate dehydrogenase, molecular weight, *Marler and Tanford,* 4217
Polyribitol phosphate: Synthesis of teichoic acids, *Glaser,* 3178
Polyribonucleotides: Nucleotide sequence analysis by means of periodate oxidation followed by cleavage with an amine, *Neu and Heppel,* 2927
Polysaccharide(s): C-; Group A streptococci, biose and triose, streptococcal cell wall structure, *Heymann, Manniello, Zeleznick, and Barkulis,* 1656
^{14}C and ^{3}H incorporation from labeled nucleotide sugars, cell-free cartilage preparation, *Silbert,* 1310
Protein-; cartilage, degradation, use of lanthanum in study, *Doganges and Schubert,* 1498
Staphylococcal; antigen, structural studies, *Hanessian and Haskell,* 2758
Poly-L-valine: Poly-L-leucine and, sorption of hydrogen chloride and trifluoroacetic acid, *Brandt and Budrys,* 1442
Porphyrins: Combination with native human globin, *Gibson,* 3282
Metalloporphyrins and, interaction with apocytochrome b_5, *Ozols and Strittmatter,* 1018
Potassium: Transport, erythrocyte, adenosine triphosphate-dependent, stoichiometry and localization, *Sen and Post,* 345
Pregnancy: Rat; localization of progesterone-7-^{3}H in mammary gland, uterus, and other tissues, *Lawson and Pearlman,* 3226
Progesterone-7-^{3}H: Metabolism *in vivo,* localization in mammary gland, uterus, and other tissues of pregnant rats, *Lawson and Pearlman,* 3226
Prolactin: Sheep; characterization, *Reisfeld, Williams, Cirillo, Tong, and Brink,* 1777
Proline: Hydroxy-; in collagen-like protein in plasma, assay procedure, *LeRoy, Kaplan, Udenfriend, and Sjoerdsma,* 3350
Proline-^{14}C: Conversion to collagen *trans*-3-hydroxyproline-^{4}C in chick embryo, *Kaplan, Witkop, and Udenfriend,* 2559
Propionate: 2-Methylmalonate and, precursors of C_{21} branched chain lactone in erythromycin, comparison, antibiotic glycosides, *Friedman, Kaneda, and Corcoran,* 2386
Propionibacteria: Methylmalonyl isomerase, purification and properties, *Kellermeyer, Allen, Stjernholm, and Wood,* 2562
Prostaglandin(s): Enzymatic conversion of essential fatty acids to, *Bergström, Danielsson, Klenberg, and Samuelsson,* PC4006
Related factors and, metabolism of prostaglandin E_1 in guinea pig lung, structures of two metabolites, *Änggård and Samuelsson,* 4097
—, synthesis of tritium-labeled prostaglandin E_1, studies on distribution and secretion in rat, *Samuelsson,* 4091
Prostaglandin E_1: Metabolism in guinea pig lung, structures of two metabolites, *Änggård and Samuelsson,* 4097
Tritium-labeled; distribution and excretion in rat, *Samuelsson,* 4091
Protease: *Bacillus licheniformis;* postlogarithmic phase metabolism of sporulating microorganisms, *Bernlohr,* 538
Protein(s): Alkali treatment, formation of new amino acid, N^{ϵ}-(DL-2-amino-2-carboxyethyl)-L-lysine, *Bohak,* 2878
Amino acid carbon incorporation, lactating rat mammary gland slices, effect of glucose, *Abraham, Madsen, and Chaikoff,* 855
-Bound phosphorylserine, synthesis, salt gland homogenates, *Hokin and Hokin* 2116
Heme; oxidation-reduction potentials, human hemoglobin, *Antonini, Wyman, Brunori, Taylor, Rossi-Fanelli, and Caputo,* 907
—; —, —, carboxypeptidase digests, *Brunori, Antonini, Wyman, Zito, Taylor, and Rossi-Fanelli,* 2340
High intake levels, effect on amino nitrogen catabolism *in vivo, Wergedal and Harper,* 1156
Hydroxyproline-containing, collagen-like, plasma, assay procedure, *LeRoy, Kaplan, Udenfriend, and Sjoerdsma,* 3350
Liver; hexose incorporation, initial subcellular site, *Sarcione,* 1686
—; plasma and, rat, glucosamine-^{14}C incorporation, glycoprotein biosynthesis, *Robinson, Molnar, and Winzler,* 1134
NH_2-terminal cysteine and cystine, determination, *Stark,* 1411
Nuclear complexes with deoxyribonucleic acid and ribonucleic acid,

Protein(s)—*Continued*
embryonic and adult chicken tissues, studies on chromatin, *Dingman and Sporn*, 3483
Oxygen-sensitive reactions, peptides, color reaction of fully combined cystine, *Gustus*, 115
—, —, reactive base, *Gustus*, 1114
Phospho-; formation in male chickens, induced by diethylstilbestrol, mechanism, *Greengard, Gordon, Smith, and Acs*, 2079
Ribonuclease S-; limited carboxypeptidase degradation, effects of changes in primary structure on enzymatic activity, *Potts, Young, Anfinsen, and Sandoval*, 3781
Ribosomal; arylcysteine incorporation, *Bucovaz and Wood*, 1151
Serum; stimulation of corticosteroidogenesis in adrenal homogenates, *Makoff, Roberts, and Fowler*, 4124
Structural changes, reversible, nonpolar substances, induction, *Wetlaufer and Lovrien*, 596
Synthesis, *Escherichia coli* mutant, altered aminoacyl ribonucleic acid synthetase, *Fangman and Neidhardt*, 1844
—, *in vivo*, indirect inhibition by chlorpromazine, *Shuster and Hannam*, 3401
—, plant mitochondria, amino acid incorporation in peptide linkage, *Das, Chatterjee, and Roy*, 1126
-Thyroxine interactions, thyroxine binding to human serum albumin and modified albumins, *Tabachnick*, 1242
Proteinase: Neutral; *Bacillus subtilis*, zinc enzyme of high specific activity, *McConn, Tsuru, and Yasunobu*, 3706
—, calcium-activated, soluble fraction of rat brain, *Guroff*, 149
Protein-depolymerizing reagents: Cytochrome *a*-borohydride reaction, studies on electron transport system, *Tzagoloff and Wharton*, 582
Proteinpolysaccharide: Cartilage, degradation, use of lanthanum in study, *Doganges and Schubert*, 1498
Proton magnetic resonance: Low field; ribonuclease and simple compounds, *Kowalsky*, 3299
Protoporphyrinogen: Recombination with cytochrome *c* apoprotein, *Sano and Tanaka*, PC3109
Pseudomonas: Glutarate metabolism, enzymatic studies, *Numa, Ishimura, Nakazawa, Okazaki, and Hayaishi*, 3915
Hydroxyproline 2-epimerase, purification and properties, *Adams and Norton*, 1525
Pseudomonas aeruginosa: Polar lipid-amino acid complex, structural composition, *Sinha and Gaby*, 3668
Pseudomonas fluorescens: Cholinesterase, acetyltransferase activity, *Fitch*, 1328
Pteridine(s): Metabolism, *Rana catesbeiana* skin, *Levy*, 560
-Requiring enzyme system, oxidation of glyceryl ethers, *Tietz, Lindberg, and Kennedy*, 4081
Tetrahydro-; primary oxidation product formed during phenylalanine hydroxylation, *Kaufman*, 332
Pteridine pyrophosphate: Hydroxymethyldihydro-; enzymatic synthesis of folate-like compounds, *Shiota, Disraely, and McCann*, 2259
Pteroic acid: Dihydro-; enzymatic formation of dihydrofolic acid, *Griffin and Brown*, 310
—; synthesis, characteristics of enzyme system, *Weisman and Brown*, 326
Purine(s): -Requiring mutants of *Escherichia coli* B, induction of inosine 5′-phosphate dehydrogenase and xanthosine 5′-phosphate aminase by ribosyl-4-amino-5-imidazolecarboxamide, *Kuramitsu, Udaka, and Moyed*, 3425
3-Ribosyl-; studies on (3-ribosylxanthine) 5′-phosphate and on ribonucleotide derivatives of certain uracil analogues, *Hatfield and Wyngaarden*, 2587
—; synthesis of (3-ribosyluric acid) 5′-phosphate and (3-ribosylxanthine) 5′-phosphate by pyrimidine ribonucleotide pyrophosphorylase of beef erythrocytes, *Hatfield and Wyngaarden*, 2580
Synthesis, pseudofeedback inhibition by 6-mercaptopurine ribonucleotide and other purine analogues, *McCollister, Gilbert, Ashton, and Wyngaarden*, 1560
Purine analogues: 6-Mercaptopurine ribonucleotide and, pseudofeedback inhibition of purine synthesis, *McCollister, Gilbert, Ashton, and Wyngaarden*, 1560
Purine bases: Ribonucleosides and, utilization and interconversion, *Salmonella typhimurium, Zimmerman and Magasanik*, 293
Purine ribonucleotides: Feedback inhibition of glutamine-phosphoribosyl pyrophosphate amidotransferase, *Caskey, Ashton, and Wyngaarden*, 2570
Puromycin: Deoxyribonucleic acid synthesis, molecular mechanism of liver regeneration, *Gottlieb, Fausto, and Van Lancker*, 555
Glucose 6-phosphatase and fructose 1,6-diphosphatase, cortisone-induced hepatic synthesis, inhibition, *Weber and Singhal*, 521
Rat liver ergosomes, breakdown and reassembly, *Villa-Trevino, Farber, Staehlin, Wettstein, and Noll*, 3826
-Treated rats, liver plasma glycoprotein synthesis, glucosamine intermediates, *Molnar, Robinson, and Winzler*, 3157
Pyocyanine: *N*-Methylphenazinium methyl sulfate and, spectroscopic characteristics and chemical properties, semiquinoid oxidation level, *Zaugg*, 3964
Pyridine: 3-Acetyl-; metabolism, additional routes, *McKennis, Turnbull, and Bowman*, 1215
Pyridine nucleotide(s): Developing rat liver, *Burch and Von Dippe*, 1898
Metabolism, rat liver, pituitary influence, *Greengard, Quinn, and Reid*, 1887
Reduced; coupling in *Leuconostoc mesenteroides, Kemp and Rose*, 2998
—; reversible direct hydrogen transfer to cytochrome b_5 reductase, *Strittmatter*, 3043
Pyridine nucleotide transhydrogenase: Estrogen-dependent, human myometrium, *Abe, Hagerman, and Villee*, 414
Pyridoxal phosphate: Role in aldolytic activity of tryptophan synthetase from *Neurospora crassa, Carsiotis and Suskind*, 4227
Pyridoxamine-oxaloacetic transaminase: Rat kidney, *Wu and Mason*, 1492
Pyrimidine(s): Arginine as precursor, strain L-929 fibroblasts infected with pleuropneumonia-like organisms, *McCarty, Woodson, Amstey, and Brown*, 544

Pyrimidine(s)—*Continued*
Biosynthetic pathway, premetamorphic tadpoles, *Lindsay, Nakagawa, and Cohen,* 2239
4-(1′-D-Ribitylamino)-5-amino-2,6-dihydroxy-; second product of riboflavin synthetase reaction, *Wacker, Harvey, Winestock, and Plaut,* 3493
Urinary; 5-acetylamino-6-amino-3-methyluracil, isolation, identification, and synthesis, *Fink, Adams, and Pfleiderer,* 4250
Pyrimidine ribonucleotide pyrophosphorylase: Beef erythrocytes; synthesis of (3-ribosyluric acid) 5′-phosphate and (3-ribosylxanthine) 5′-phosphate, *Hatfield and Wyngaarden,* 2580
Pyrophosphatase: Inorganic. *See* Inorganic pyrophosphatase
Pyrophosphate: Binding to myosin, *Martonosi and Meyer,* 640
Inorganic. *See* Inorganic pyrophosphate
Pyrophosphate-glucose phosphotransferase: Identity with glucose 6-phosphatase and pyrophosphate-glucose phosphotransferase, *Nordlie and Arion,* 1680
Rat liver microsomes; glucose 6-phosphatase, inorganic pyrophosphatase and, kinetic studies, *Arion and Nordlie,* 2752
Pyrophosphate phosphotransferase: Microsomal; probable identity with inorganic pyrophosphatase and glucose 6-phosphatase, *Stetten and Taft,* 4041
Pyrophosphorylase: Guanosine diphosphate mannose. *See* Guanosine diphosphate mannose pyrophosphorylase
Pyrimidine ribonucleotide. *See* Pyrimidine ribonucleotide pyrophosphorylase
Pyrrolidine ring: Nicotine, alternate routes in metabolic degradation, *McKennis, Schwartz, and Bowman,* 3990
Pyruvate: Metabolism, utilization by rat brain mitochondria, *Deitrich and Hellerman,* 2735
Pyruvate-2-^{14}C: Glucose, human blood, distribution labeling, diabetic and nondiabetic, *Shreeve and De Meutter,* 729

Q

Quinolinate: Enzymatic conversion to nicotinic acid mononucleotide, mammalian liver, *Gholson, Ueda, Ogasawara, and Henderson,* 1208

R

Red cells: Human; hexokinase activity, alteration on storage, *Bishop,* 1053
Reductase: Cytidine diphosphate. *See* Cytidine diphosphate reductase
Cytochrome b_5. *See* Cytochrome b_5 reductase
Dihydrofolate. *See* Dihydrofolate reductase
Dihydrofolic. *See* Dihydrofolic reductase
D-Lactic-cytochrome. *See* Lactic-cytochrome reductase
Nitro-. *See* Nitro-reductase
Succinate-cytochrome *c*. *See* Succinate-cytochrome *c* reductase
Thioredoxin. *See* Thioredoxin reductase
Respiration: -Coupled uptake of α-aminoisobutyric acid, *Bacillus megaterium, Marquis and Gerhardt,* 3361
Respiratory chain: Enzyme systems, reconstitution, reconstitution of succinate-cytochrome *c* reductase from soluble succinate dehydrogenase and cytochrome *b*-c_1 particle, *King and Takemori,* 3559
—, —, sequential fragmentation of succinate oxidase, preparation and properties of succinate-cytochrome *c* reductase and cytochrome *b*-c_1 particle, *Takemori and King,* 3546
Hemophilus parainfluenzae, localization of enzymes catalyzing hydrogen and electron transport, *White and Smith,* 3956
Hydrogen transfer, reduced diphosphopyridine nucleotide dehydrogenase, effect of sulfhydryl inhibitors and phospholipase, *Minakami, Schindler, and Estabrook,* 2042
—, —, initial lag in oxidation of reduced diphosphopyridine nucleotide, *Minakami, Schindler, and Estabrook,* 2049
Mycobacterium phlei, oxidative phosphorylation in fractionated bacterial systems, *Asano and Brodie,* 4280
New oxidation-reduction component, properties studied by electron paramagnetic resonance spectroscopy, *Rieske, Hansen, and Zaugg,* 3017
Site of action of thyroid hormones and iodine-donating substances, *Michel, Roche, Michel, Girard, and Rall,* 3062
Respiratory chain-linked reduced nicotinamide adenine dinucleotide dehydrogenase: Beef heart; purification and properties, *Cremona and Kearney,* 2328
Retina: Metabolism, role of microsomes in vitamin A esterification in visual cycle, *Andrews and Futterman,* 4073
—, vitamin A ester composition, *Futterman and Andrews,* 81
Rhamnose: Guanosine diphosphate D-. *See* Guanosine diphosphate D-rhamnose
Rhizobium: Propionate metabolism, relation to cobalt requirement, *De Hertogh, Mayeux, and Evans,* 2446
Riboflavin: Enzymes and coenzymes, effects of galactoflavin, *Prosky, Burch, Bejrablaya, Lowry, and Combs,* 2691
Riboflavin synthetase: 4-(1′-D-Ribitylamino)-5-amino-2,6-dihydroxypyrimidine, second reaction product, *Wacker, Harvey, Winestock, and Plaut,* 3493
Ribonuclease(s): Carboxymethylhistidine, denaturation and binding properties, *Yang and Hummel,* 3775
Characterization, studies, *Rushizky, Greco, Hartley, and Sober,* 2165
5-Dimethylamino-1-naphthalenesulfonyl derivatives, reduction and air oxidation, *White,* 1032
Disulfide bonds, interaction with phosphorothioate, *Neumann, Goldberger, and Sela,* 1536
Low field proton magnetic resonance, *Kowalsky,* 3299
Methionine residues, alkylation in 8 M urea, *Stark and Stein,* 3755
Reduced; reactivation, catalyzed by microsomal enzyme system, purification and properties, *Goldberger, Epstein, and Anfinsen,* 1406
—; —, oxidation and disulfide interchange, *Givol, Goldberger, and Anfinsen,* PC3114
Reduced derivatives, reoxidation, *Epstein and Goldberger,* 1087
Release into medium when *Escherichia coli* cells are converted to

Ribonuclease(s)—*Continued*
spheroplasts, *Neu and Heppel*, 3893
Ribonuclease B: Bovine pancreatic; structure, isolation of glycopeptide, *Plummer and Hirs*, 2530
Ribonuclease II: Alkaline; purification from mitochondrial and soluble fractions of liver, *Beard and Razzell*, 4186
Escherichia coli; purification and properties, *Spahr*, 3716
Ribonuclease S: Limited carboxypeptidase degradation of S-protein and S-peptide, effects of changes in primary structure on enzymatic activity, *Potts, Young, Anfinsen, and Sandoval*, 3781
Ribonucleic acid: Amino acid acceptor; selective phosphorylation of phosphomonoester groups, *RajBhandary, Young, and Khorana*, 3875
-Associated deoxyribonucleic acid, *Drosophila melanogaster, Mead*, 550
Deoxyribonucleic acid and, enzymatic methylation, properties of deoxyribonucleic acid methylation reaction, *Gold and Hurwitz*, 3866
—, —, properties of soluble ribonucleic acid-methylating enzymes, *Hurwitz, Gold, and Anders*, 3474
—, —, purification and properties of deoxyribonucleic acid-methylating activity of *Escherichia coli, Gold and Hurwitz*, 3858
—, —, purification of soluble ribonucleic acid-methylating enzymes, *Hurwitz, Gold, and Anders*, 3462
Enzymatic synthesis, deoxyribonucleic acid-directed synthesis of complementary cytoplasmic ribonucleic acid components, *Robinson, Hsu, Fox, and Weiss*, 2944
—, deoxyribonucleic acid-primed reaction with *Micrococcus lysodeikticus* ribonucleic acid polymerase, *Fox and Weiss*, 175
—, *Micrococcus lysodeikticus* ribonucleic acid polymerase, ribonucleic acid-primed, *Fox, Robinson, Haselkorn, and Weiss*, 186
—, ribonucleic acid polymerase preparation, *Micrococcus lysodeikticus* extracts, *Nakamoto, Fox, and Weiss*, 167
Formation, *Escherichia coli* ribonucleic acid polymerase, *Stevens and Henry*, 196
Ribonucleic acid—*Continued*
Liver and brain; dihydrouridine monophosphate and uridine monophosphate incorporation, *Carr and Grisolia*, 160
Messenger; liver, studies, *Trakatellis, Axelrod, and Montjar*, 4237
Methyl acceptor; association with ribosomes, *Comb*, PC3597
Nuclear complexes with deoxyribonucleic acid and protein, embryonic and adult chicken tissues, studies on chromatin, *Dingman and Sporn*, 3483
Nucleolar; metabolism after partial hepatectomy, *Tsukada and Lieberman*, 1564
-Primed ribonucleic acid polymerase reaction, enzymatic synthesis of ribonucleic acid, *Fox, Robinson, Haselkorn, and Weiss*, 186
Ribosomal; methylated bases, *Escherichia coli* K12 W-6, *Starr and Fefferman*, 3457
Soluble; action of spleen phosphodiesterase, *Clark, Eyzaguirre, and Gunther*, 1877
—; involvement in amino acid incorporation by a maize system, *Mans, Purcell, and Novelli*, 1762
—; methylating enzymes, properties, *Hurwitz, Gold, and Anders*, 3474
—; —, purification, *Hurwitz, Gold, and Anders*, 3462
—; role of methylated bases in biological activity, *Peterkofsky, Jesensky, Bank, and Mehler*, 2918
Synthesis, *Escherichia coli* mutant, altered aminoacyl ribonucleic acid synthetase, *Fangman and Neidhardt*, 1844
—, liver nuclear and nucleolar preparations after partial hepatectomy, *Tsukada and Lieberman*, 2952
Ribonucleic acid polymerase: *Escherichia coli*, homopolymer formation, *Stevens*, 204
—, purification, ribonucleic acid formation, *Stevens and Henry*, 196
Micrococcus lysodeikticus extracts, deoxyribonucleic acid-primed reaction, enzymatic synthesis of ribonucleic acid, *Fox and Weiss*, 175
—, enzymatic synthesis of ribonucleic acid, *Nakamoto, Fox, and Weiss*, 167
—, ribonucleic acid-primed reaction, enzymatic synthesis of ribonucleic acid, *Fox, Robinson, Haselkorn, and Weiss*, 186
Uterine; early effects of estrogen, *Gorski*, 889
Ribonucleosides: Purine bases and, utilization and interconversion, *Salmonella typhimurium, Zimmerman and Magasanik*, 293
Ribonucleotide(s): 6-Mercaptopurine; other purine analogues, pseudofeedback inhibition of purine synthesis, *McCollister, Gilbert, Ashton, and Wyngaarden*, 1560
Purine. *See* Purine ribonucleotides
Ribose compounds: Dihydrofolic acid synthesis, *Reynolds and Brown*, 317
Ribosomes: Association with methyl acceptor ribonucleic acid, *Comb*, PC3597
Bovine pancreatic; purification and properties, *Keller, Cohen, and Wade*, 3292
Escherichia coli; single β-D-galactosidase centers, distribution and activity, *Lederberg, Rotman, and Lederberg*, 54
(3-Ribosyluric acid) 5′-phosphate: Synthesis by pyrimidine ribonucleotide pyrophosphorylase of beef erythrocytes, *Hatfield and Wyngaarden*, 2580
(3-Ribosylxanthine) 5′-phosphate: Studies, 3-ribosylpurines, *Hatfield and Wyngaarden*, 2587
Synthesis by pyrimidine ribonucleotide pyrophosphorylase of beef erythrocytes, *Hatfield and Wyngaarden*, 2580
Ricinine nitrilase: Purification and properties, *Hook and Robinson* 4263
Reaction product and substrate specificity, *Robinson and Hook*, 4257
Rotatory dispersion: Anomalous; enzyme complexes, mechanism of coenzyme binding to liver alcohol dehydrogenase, *Li and Vallee*, 792
Ruminants: Acetate metabolism, *Sabine and Johnson*, 89

S

Saccharomyces cerevisiae: Lysine biosynthesis, new α-aminoadipic acid metabolite, *Kuo, Saunders, and Broquist*, 508

Saccharomyces cerevisiae—*Continued*
Methionine biosynthesis, partial purification and properties of *S*-adenosylmethionine:homocysteine methyltransferase, *Shapiro, Yphantis, and Almenas,* 1551
Saccharomyces fragilis: Galactokinase, purification and properties, *Heinrich,* 50
Salmonella: Particulate and soluble enzymes, catalysis of glucose and galactose incorporation, biosynthesis of bacterial lipopolysaccharide, *Rothfield, Osborn, and Horecker,* 2788
Salmonella typhimurium: D-Glucose metabolic pathways, study of mutant lacking phosphoglucose isomerase, *Fraenkel and Horecker,* 2765
Purine bases and ribonucleosides, utilization and interconversion, *Zimmerman and Magasanik,* 293
Sulfate- and thiosulfate-transporting system, characteristics, *Dreyfuss,* 2292
Salt gland: Phosphatidic acid and protein-bound phosphorylserine synthesis, *Hokin and Hokin,* 2116
Sarcoplasmic reticulum: Ca^{++} uptake, *Martonosi and Feretos,* 648
—, correlation with adenosine triphosphatase activity, *Martonosi and Feretos,* 659
Fragmented; mechanism of inhibition of myofibrillar adenosine triphosphatase, studies with calcium-free adenosine triphosphate, *Seidel and Gergely,* 3331
Sarcosine dehydrogenase: Assay, purification, and characterization, oxidation of *N*-methylglycines by primate liver mitochondria, *Hoskins and Bjur,* 1856
Semiquinoid: Oxidation level, *N*-methylphenazinium methyl sulfate and pyocyanine, spectroscopic characteristics and chemical properties, *Zaugg,* 3964
Serine: Biosynthesis in cultured human cells, enzymology and regulation, *Pizer,* 4219
L-; formation, heat capacities from 11 to 305° K, entropies, enthalpy, and free energy, *Hutchens, Cole, and Stout,* 4194
Hydroxymethyl group, biogenesis from intramolecularly labeled formaldehyde-^{14}C,D_2, *Rachele, White, and Grünewald,* 353

Serine—*Continued*
Linkages in mucopolysaccharides and glycoproteins, *Anderson, Seno, Sampson, Riley, Hoffman, and Meyer,* PC2716
Phosphatidyl-; aqueous dispersions, ionic properties, *Abramson, Katzman, and Gregor,* 70
Phospho-; bound, new form, *Escherichia coli, Rafter,* 1044
Phosphoryl-; protein-bound, synthesis, salt gland homogenates, *Hokin and Hokin,* 2116
Serine dehydrase: Threonine dehydrase and, studies, *Freedland and Avery,* 3357
Serine transhydroxymethylase: Properties of enzyme-substrate complexes of D-alanine and glycine, *Schirch and Jenkins,* 3801
Transamination of D-alanine, *Schirch and Jenkins,* 3797
Serum: Ceruloplasmin inhibitor, citric acid, *Osaki, McDermott, and Frieden,* PC364
Human; β-lipoprotein, proteolysis, *Bernfeld and Kelley,* 3341
Protein, stimulation of corticosteroidogenesis in adrenal homogenates, *Makoff, Roberts, and Fowler,* 4124
Transport of A and B chains of insulin, studies *in vitro, Ensinck, Coombs, Williams, and Vallance-Owen,* 3377
Shikimate 5-phosphate: 3-Enolpyruvyl-; enzymatic formation, isolation, *Levin and Sprinson,* 1142
Sialic acid: Brain gangliosides, fluorometric assay, *Hess and Rolde,* 3215
Simple derivatives, stability, *Karkas and Chargaff,* 949
Sialic acid 9-phosphatase: Isolation from human erythrocytes, *Jourdian, Swanson, Watson, and Roseman,* PC2714
Skeletal muscle: Rabbit; strips, androst-4-ene-3,17-dione-4-^{14}C metabolism *in vitro,* isolation of testosterone-^{14}C, 5α-androstane-3,17-dione-^{14}C, and 3β-hydroxy-5α-androstan-17-one-^{14}C, *Thomas and Dorfman,* 762
—; supernatant, androst-4-ene-3,17-dione-4-^{14}C metabolism, isolation of 3β-hydroxyandrost-4-en-17-one-^{14}C and testosterone-^{14}C, *Thomas and Dorfman,* 766
Rat; D- and L-lactic acid-2-^{14}C metabolism *in vivo, Koeppe, Inciardi, Warnock, and Wilson,* 3609
Skin: *Rana catesbeiana,* pteridine metabolism, *Levy,* 560
Sterols, biosynthesis, enzymatic demethylation of lanosterol and lanosta-7,24-dien-3β-ol by rat liver homogenates, *Gaylor,* 756
Sodium: Transport, erythrocyte, adenosine triphosphate-dependent, stoichiometry and localization, *Sen and Post,* 345
Sodium dodecyl sulfate: Lactic dehydrogenases, denaturation, *Di Sabato and Kaplan,* 438
Reversible interaction with bacterial chromatophores, *Newton,* 1585
Solvents: Nonaqueous; synthetic polypeptide antigen-antibody interaction, antibody activity, *Gould, Gill, and Kunz,* 3071
Spermidine: Oxidation, purified plasma amine oxidase, identification of aminoaldehydes, *Tabor, Tabor, and Bachrach,* 2194
Spermine: Oxidation, purified plasma amine oxidase, identification of aminoaldehydes, *Tabor, Tabor, and Bachrach,* 2194
Tetrahydrofolate formylase activity, stimulation, *Lansford, Turner, Weathersbee, and Shive,* 497
Uridine diphosphogalactose 4-epimerase activation, *Darrow and Creveling,* PC362
Spheroplasts: Conversion of *Escherichia coli* cells, release of ribonuclease into medium, *Neu and Heppel,* 3893
Sphingolipids: Biochemistry, structure of phytoglycolipid, *Carter, Brooks, Gigg, Strobach, and Suami,* 743
Squalene: Center, stereochemistry, biosynthesis from farnesyl pyrophosphate, conversion to cholesterol, *Samuelsson and Goodman,* 98
Staphylococcus: Polysaccharide antigen, structural studies, *Hanessian and Haskell,* 2758
Staphylococcus aureus: Tetracycline antibiotics, mode of action, *Hash, Wishnick, and Miller,* 2070
Stereochemistry: Squalene, center, during biosynthesis from farnesyl pyrophosphate and conversion to cholesterol, *Samuelsson and Goodman,* 98
Steroid(s): Cholic acid, transformation *in vitro, Corynebacterium simplex, Hayakawa and Samuelsson,* 94

Steroid(s)—*Continued*
7β-Hydroxylation, biochemical studies, *Fukushima*, 1748
Metabolism, effect of experimental diabetes, alterations in androst-4-ene-3,17-dione and cortisol metabolism, *Gold and Garren*, 2786
Steroid sulfates: Biosynthesis by human ovarian tissue, *Wallace and Silberman*, 2809
Sterols: Skin, biosynthesis, enzymatic demethylation of lanosterol and lanosta-7,24-dien-3β-ol by rat liver homogenates, *Gaylor*, 756
Stilbestrol: Diethyl-; induction of phosphoprotein formation in male chickens, mechanism, *Greengard, Gordon, Smith, and Acs*, 2079
Streptidine: Moiety, streptomycin, myo-inositol precursor, *Horner*, 2256
Streptococcus(i): Broth cultures, isolation of hyaluronic acid, *Thonard, Migliore, and Blustein*, 726
Cell walls, structure, characterization of alanine-containing glucosaminyl-muramic acid derivative liberated by lysozyme from streptococcal glycopeptide, *Heymann, Manniello, and Barkulis*, 2981
—, —, Group A biose and triose from C-polysaccharide, *Heymann, Manniello, Zeleznick, and Barkulis*, 1656
—, —, purification and properties of phage muralysin, *Barkulis, Smith, Boltralik, and Heymann*, 4027
Streptococcus bovis: Asparagine synthetase, purification and properties, *Burchall, Reichelt, and Wolin*, 1794
Streptococcus faecalis: Lysine-hydroxylysine relationships, *Smith and Henderson*, 1867
Streptococcus pyogenes: Deoxyribonucleases, *Winter and Bernheimer*, 215
Streptokinase: Interaction with human plasminogen, combining in ultracentrifuge under various conditions, *Davies, Englert, and De Renzo*, 2651
—, functional properties of activated enzyme, *Markus and Werkheiser*, 2637
—, kinetics of activation, *Werkheiser and Markus*, 2644
Streptomyces antibioticus: D-Valine synthesis, mechanism, *Salzman, Katz, and Weissbach*, 1864
Streptomycin: Biosynthesis, myo-inositol precursor of streptidine moiety, *Horner*, 2256
Biosynthesis, origin of guanidine group, *Horner*, 578
Succinate-cytochrome *c* reductase: Preparation and properties, sequential fragmentation of succinate oxidase, *Takemori and King*, 3546
Reconstitution from soluble succinate dehydrogenase and cytochrome b-c_1 particle, *King and Takemori*, 3559
Succinate dehydrogenase: Soluble; cytochrome b-c_1 particle and, reconstitution of succinate-cytochrome *c* reductase from, *King and Takemori*, 3559
Succinate oxidase: Sequential fragmentation, preparation and properties of succinate-cytochrome *c* reductase and cytochrome b-c_1 particle, *Takemori and King*, 3546
Succinic thiokinase: Kinetic studies, initial velocity, product inhibition, effect of arsenate, *Cha and Parks*, 1968
Pig heart; purification, *Cha and Parks*, 1961
Sucrose-uridine diphosphate glucose glucosyltransferase: Jerusalem artichoke tubers, *Avigad*, 3613
Sugar(s): Nucleotide; ^{14}C- and ^{3}H-labeled, ^{14}C and ^{3}H incorporation into polysaccharide, cell-free cartilage preparation, *Silbert*, 1310
Transport, relation to mutarotases, *Keston*, 3241
—, muscle, mobile, carrier-mediated, identification, *Morgan, Regen, and Park*, 369
Sugar nucleotide(s): Reactions in *Arthrobacter*, biosynthesis of guanosine diphosphomannuronate, *Preiss*, 3127
—, purification and properties of guanosine diphosphate mannose pyrophosphorylase, *Preiss and Wood*, 3119
Sulfate: Thiosulfate and, transporting system, *Salmonella typhimurium*, characteristics, *Dreyfuss*, 2292
Sulfhydryl: -Disulfide interchange, myosin A, *Stracher*, 1118
Sulfhydryl groups: Rat liver mitochondria, changes during swelling and contraction, *Riley and Lehninger*, 2083
Reversible reaction with cyanate, determination of NH_2-terminal cysteine and cystine in proteins, *Stark*, 1411
Sulfhydryl inhibitors: Hydrogen transfer between reduced diphosphopyridine nucleotide dehydrogenase and respiratory chain, *Minakami, Schindler, and Estabrook*, 2042
Synephrine: *l*-; isolation and identification in citrus fruit and leaves, *Stewart, Newhall, and Edwards*, 930
Synthetase: Aminoacyl ribonucleic acid. *See* Aminoacyl ribonucleic acid synthetase
Argininosuccinate. *See* Argininosuccinate synthetase
Arginyl ribonucleic acid. *See* Arginyl ribonucleic acid synthetase
Asparagine. *See* Asparagine synthetase
Carbamyl phosphate. *See* Carbamyl phosphate synthetase
Fatty acid. *See* Fatty acid synthetase
Geranylgeranyl pyrophosphate. *See* Geranylgeranyl pyrophosphate synthetase
Riboflavin. *See* Riboflavin synthetase
Tryptophan. *See* Tryptophan synthetase

T

Talomethylose: Guanosine diphosphate D-. *See* Guanosine diphosphate D-talomethylose
Teichoic acids: Glucosylation of polyglycerophosphate, *Glaser and Burger*, 3187
Synthesis, polyglycerophosphate, *Burger and Glaser*, 3168
—, polyribitol phosphate, *Glaser*, 3178
Temperature: Synthetic polypeptide antigen-antibody interaction, antibody activity, *Gould, Gill, and Kunz*, 3071
Testosterone: Metabolism, conversion of testosterone-17α-^{3}H to 5α- and 5β-androstane-3α,17β-diol-17α-^{3}H, new "17β-hydroxyl pathway," *Baulieu and Mauvais-Jarvis*, 1569
—, testosterone-4-^{14}C and androst-4-ene-3,17-dione-1,2-^{3}H, *Baulieu and Mauvais-Jarvis*, 1578
Testosterone-^{14}C: Isolation, androst-4-ene-3,17-dione-4-^{14}C metabolism, rabbit skeletal muscle strips, *Thomas and Dorfman*, 762
—, —, rabbit skeletal muscle super-

Testosterone-^{14}C—*Continued*
natant, *Thomas and Dorfman*, 766
Testosterone-4-^{14}C: Androst-4-ene-3,17-dione-1,2-^{3}H and, metabolism, *Baulieu and Mauvais-Jarvis*, 1578
Testosterone-17α-^{3}H: Conversion to 5α- and 5β-androstane-3α,17β-diol-17α-^{3}H, new "17β-hydroxyl pathway," *Baulieu and Mauvais-Jarvis*, 1569
Tetracycline antibiotics: Mode of action in *Staphylococcus aureus*, *Hash, Wishnick, and Miller*, 2070
Tetrahydrofolate formylase: Spermine stimulation, *Lansford, Turner, Weathersbee, and Shive*, 497
Tetrahydrofolic acid: Assay, use of 5,10-methylenetetrahydrofolic dehydrogenase, *Ramasastri and Blakley*, 106
Enzymatic formation of tetrahydropteroylpolyglutamic acid compounds, *Griffin and Brown*, 310
N^5-Methyl-; methionine formation, effect of vitamin B_{12} analogues, *Weissbach, Redfield, and Dickerman*, 146
Tetrahymena pyriformis: Oxidation of reduced diphosphopyridine nucleotide, *Rahat, Judd, and van Eys*, 3537
5-Ribosyluracil 5′-monophosphate biosynthesis, *Heinrikson and Goldwasser*, 1177
Tetraoxypteridine isomerase: *McNutt and Damle*, 4272
Thiocyanate: Oxidation by cytoplasmic particulate fraction of thyroid tissue, *Maloof and Soodak*, 1995
Thiokinase: Guanosine triphosphate-specific; liver mitochondria, activation of fatty acids, *Rossi and Gibson*, 1694
Succinic. *See* Succinic thiokinase
Thiols: Erythrocytes; *N*-ethylmaleimide reaction with intact erythrocytes, *Morell, Ayers, Greenwalt, and Hoffman*, 2696
Thioredoxin: Hydrogen donor, from *Escherichia coli* B, isolation and characterization, enzymatic synthesis of deoxyribonucleotides, *Laurent, Moore, and Reichard*, 3436
Thioredoxin reductase: *Escherichia coli* B, purification and properties, enzymatic synthesis of deoxyribonucleotides, *Moore, Reichard, and Thelander*, 3445
Thiosulfate: Sulfate and, transporting
Thiosulfate—*Continued*
system, *Salmonella typhimurium*, characteristics, *Dreyfuss*, 2292
Threonic acid dehydrogenase: L-; purification and properties, *Aspen and Jakoby*, 710
Threonine: Linkages in mucopolysaccharides and glycoproteins, *Anderson, Seno, Sampson, Riley, Hoffman, and Meyer*, PC2716
Threonine dehydrase: Induction by oral intubation of casein hydrolysate, rat liver, *Pitot and Peraino*, 1783
Ornithine δ-transaminase and, dietary and hormonal induction, carbohydrate repression, rat liver, *Peraino and Pitot*, 4308
Serine dehydrase and, studies, *Freedland and Avery*, 3357
Thymidine phosphorylase(s): *Escherichia coli;* substrate specificity and induction, *Razzell and Casshyap*, 1789
Normal and malignant tissues, deoxyribosyl transfer, *Zimmerman and Seidenberg*, 2618
Nucleoside:pyrimidine deoxyribosyltransferase activity, *Zimmerman*, 2622
Thymine: Conversion to 5-hydroxymethyluracil, cell-free system, *Abbott, Kadner, and Fink*, 156
Thymus: Calf; orotic acid-decarboxylating enzymes, purification and properties, *Kasbekar, Nagabhushanam, and Greenberg*, 4245
Thyroglobulin: Purification by gel filtration and density gradient centrifugation, *Salvatore, Salvatore, Cahnmann, and Robbins*, 3267
Thyroid hormones: Enzymatic *O*-methylation, *Tomita, Cha, and Lardy*, 1202
Iodine-donating substances and, metabolism, site of action in respiratory chain, *Michel, Roche, Michel, Girard, and Rall*, 3062
Thyroid tissue: Cytoplasmic particulate fraction, oxidation of thiocyanate, *Maloof and Soodak*, 1995
Iodide peroxidase, purification and properties, thyroxine biosynthesis, *Igo, Mahoney, and Mackler*, 1893
Thyroxine: Biosynthesis, purification and properties of particulate iodide peroxidase from thyroid tissue, *Igo, Mahoney, and Mackler*, 1893
Degradation, product from β-phenyl
Thyroxine—*Continued*
ring following incubation with microsomes, *Wynn and Gibbs*, 527
-Induced metamorphosis, tadpoles, uracil metabolism, *Akamatsu, Lindsay, and Cohen*, 2246
-Protein interactions, binding to human serum albumin and modified albumins, *Tabachnick*, 1242
-Treated tadpoles, liver slices, carbamyl phosphate synthetase synthesis, *Tatibana and Cohen*, 2905
α-Tocopherone: Di-; *cis-trans* isomers, *Csallany and Draper*, 574
Toluene: Ethlene-^{14}C, avocado, *Jansen*, 1664
Transaminase(s): Acetylornithine δ-. *See* Acetylornithine δ-transaminase
Diamine-α-ketoglutarate. *See* Diamine-α-ketoglutarate transaminase
Glutamic-aspartic. *See* Glutamic-aspartic transaminase
Glutamic-glycine. *See* Glutamic-glycine transaminase
Glutamic-oxaloacetic. *See* Glutamic-oxaloacetic transaminases
Ornithine δ-. *See* Ornithine δ-transaminase
Pyridoxamine-oxaloacetic. *See* Pyridoxamine-oxaloacetic transaminase
Tyrosine-α-ketoglutarate. *See* Tyrosine-α-ketoglutarate transaminase
Transglucosylase: Adenosine diphosphate glucose:glycogen. *See* Adenosine diphosphate glucose:glycogen transglucosylase
Inhibitor, purification and properties, from *Mycobacterium tuberculosis*, *Lornitzo and Goldman*, 2730
Transglycosylation: Reaction catalyzed by lysozyme, *Sharon and Seifter*, PC2398
Transhydrogenase: Pyridine nucleotide. *See* Pyridine nucleotide transhydrogenase
Transhydroxymethylase: Serine. *See* Serine transhydroxymethylase
Transmethylase: 5-Methyltetrahydrofolate-homocysteine. *See* 5-Methyltetrahydrofolate-homocysteine transmethylase
Transphosphorylase(s): Adenosine triphosphate. *See* Adenosine triphosphate transphosphorylases
Adenosine triphosphate-adenosine 5′-phosphate (myokinase). *See* Adenosine triphosphate-adenosine 5′-phosphate transphosphorylase
Adenosine triphosphate-creatine.

Transphosphorylase(s)—*Continued*
See Adenosine triphosphate-creatine transphosphorylase
Nucleoside triphosphate-nucleoside diphosphate. *See* Nucleoside triphosphate-nucleoside diphosphate transphosphorylase
Trehalase: Bakers' yeast; purification and properties, *Panek and Souza*, 1671
Triglyceride(s): Dietary, marine animals, retention of fatty acid distribution pattern, *Brockerhoff, Hoyle, and Ronald*, 735
Digestion and absorption, *Mattson and Volpenhein*, 2772
Perfused liver, removal and metabolism, *Rodbell, Scow, and Chernick*, 385
Triose: Group A; C-polysaccharide, streptococcal cell wall structure, *Heymann, Manniello, Zeleznick, and Barkulis*, 1656
Triosephosphate dehydrogenase: Comparative enzymology, *Allison and Kaplan*, 2140
Diphosphopyridine nucleotide content and action, *Murdock and Koeppe*, 1983
Tripeptides: Enzymatic synthesis, intermediate formation of dipeptide-diphosphate anhydride, *Nishimura, Dodd, and Meister*, 2553
Triphosphatase: Adenosine. *See* Adenosine triphosphatase
Tropomyosin: Influence on actomyosin reactions at low ionic strength, *Katz*, 3304
Trypsin: Canine cardiac myosin, macromolecular fragments from digestion, *Mueller, Theiner, and Olson*, 2153
Catalysis, specificity mechanism, activation of catalytic site by alkylammonium ions, hydrolysis of acetylglycine ethyl ester, *Inagami and Murachi*, 1395
—, —, comparison of trypsin and α-chymotrypsin in nonspecific catalyses of hydrolysis of acetylglycine ethyl ester, *Inagami and Mitsuda*, 1388
—, —, inhibition by alkylammonium ions, *Inagami*, 787
Crystalline preparations, chymotrypsin activity, inhibition, *Kostka and Carpenter*, 1799
Tryptophan: Relation to biological activity of *Clostridium botulinum* toxin, *Boroff and DasGupta*, 3694
Tryptophan-5-^{14}C: DL-; synthesis and metabolism, *Mathur, Ng, and Henderson*, 2184
Tryptophan synthetase: *Neurospora crassa;* aldolytic activity, role of pyridoxal phosphate, *Carsiotis and Suskind*, 4227
Tyrosine: *N*-Acetyl-L-; hydroxamic acid derivative, hydrolysis and synthesis, chymotrypsin catalysis, *Caplow and Jencks*, 1640
α-Chymotrypsin, identification of most rapidly iodinating residue, *Dube, Roholt, and Pressman*, 3347
-Fed rats, enzymatic basis of tyrosyluria, *Knox, Linder, Lynch, and Moore*, 3821
Integrity in chymotrypsin, required for preservation of catalytic function, *Dube, Roholt, and Pressman*, 1809
Plasma albumin; derived from administered phenylalanine, anomalous behavior, *Ito, Guroff, and Udenfriend*, 3385
Tyrosine hydroxylase: Initial step in norepinephrine biosynthesis, *Nagatsu, Levitt, and Udenfriend*, 2910
Tyrosine-α-ketoglutarate transaminase: Specificity, studies, *Jacoby and La Du*, 419
Tyrosyluria: Tyrosine-fed rats, enzymatic basis, *Knox, Linder, Lynch, and Moore*, 3821

U

Ultracentrifuge: Combining of streptokinase and human plasminogen, *Davies, Englert, and De Renzo*, 2651
Uracil: 5-Acetylamino-6-amino-3-methyl-; new urinary pyrimidine, isolation, identification, and synthesis, *Fink, Adams, and Pfleiderer*, 4250
Analogues; ribonucleotide derivatives, studies, 3-ribosylpurines, *Hatfield and Wyngaarden*, 2587
5-Hydroxymethyl-; thymine conversion, cell-free system, *Abbott, Kadner, and Fink*, 156
Metabolism, tadpoles, thyroxine-induced metamorphosis, *Akamatsu, Lindsay, and Cohen*, 2246
Uridine nucleotide biosynthesis, effect of alloxan, *Younathan, Stone, and Harris*, 290
Uracil 5′-monophosphate: 5-Ribosyl-; biosynthesis, *Tetrahymena pyriformis, Heinrikson and Goldwasser*, 1177
Urea: Biosynthesis, stereospecificity of argininosuccinase reaction, *Hoberman, Havir, Rochovansky, and Ratner*, 3818
8 M; alkylation of methionine residues of ribonuclease, *Stark and Stein*, 3755
Xanthine oxidase, competitive inhibition with guanidinium ion, *Fridovich*, 3519
Urease: Water-insoluble derivatives, preparation and properties, *Riesel and Katchalski*, 1521
Uridine diphosphate glucose-β-1,3-glucan β-3-glucosyltransferase: *Euglena gracilis, Marechal and Goldemberg*, 3163
Uridine diphosphate glucose-glycogen glucosyltransferase: Hepatic synthesis, insulin administration, alloxan-diabetic rats, *Steiner and King*, 1292
Uridine diphosphogalactose 4-epimerase: Purification and characterization, *Wilson and Hogness*, 2469
Yeast; activation by spermine and other cations, *Darrow and Creveling*, PC362
Uridine monophosphate: Dihydro-; incorporation into liver and brain ribonucleic acid, *Carr and Grisolia*, 160
Incorporation into liver and brain ribonucleic acid, *Carr and Grisolia*, 160
Uridine nucleotide(s): Bacterial; enzymatic synthesis of peptide, purification and properties of L-glutamic acid-adding enzyme, *Nathenson, Strominger, and Ito*, 1773
—, —, purification and properties of L-lysine-adding enzyme, *Ito and Strominger*, 210
Biosynthesis from uracil, effect of alloxan, *Younathan, Stone, and Harris*, 290
Uridine phosphorylase: Mouse; specificity, chromatography, purification, and properties, *Krenitsky, Barclay, and Jaquez*, 805
Urine: Galactosemia patients, isolation and identification of galactitol, *Wells, Pittman, and Egan*, 3192
Rabbit; isolation of 17α-estradiol conjugate with *N*-acetylglucosamine, *Layne, Sheth, and Kirdani*, 3221

Ustilagic acid: Fungal metabolism of complex glycosides, *Eveleigh, Dateo, and Reese,* 839

Uterus: Immature rats, carbamoyl phosphate:L-aspartate carbamoyltransferase activity, effect of estradiol-17β, *Tremblay and Thayer,* 3321

Pregnant rats, localization of progesterone-7-^{3}H, *Lawson and Pearlman,* 3226

V

Vaccenic acid: *cis*-; occurrence and biosynthesis in animal tissues, *Holloway and Wakil,* 2489

Vaccinia virus: Deoxyribonucleic acid synthesis enzymes, cells, infection, *Green, Piña, and Chagoya,* 1188

Valeric acid: L-α-Amino-δ-; *Canavalia ensiformis,* identification, *Thompson, Morris, and Hunt,* 1122

Valine: γ-L-Glutamyl-L-; iris leaf tissue, *Morris, Thompson, and Asen,* 1833

D-; synthesis, *Streptomyces antibioticus,* mechanism, *Salzman, Katz, and Weissbach,* 1864

Vasopressin: Lysine-. *See* Lysine-vasopressin

Virus(es): Adeno-. *See* Adenovirus

-Induced acquisition of metabolic function, biosynthesis *de novo* of deoxycytidylate hydroxymethylase, *Mathews, Brown, and Cohen,* 2957

Vaccinia. *See* Vaccinia virus

Visual cycle: Vitamin A esterification, role of microsomes, metabolism of retina, *Andrews and Futterman,* 4073

Vitamin A: Esterification in visual cycle, role of microsomes, metabolism of retina, *Andrews and Futterman,* 4073

Vitamin A—*Continued*

Skeletal metabolism, *Clark and Smith,* 1266

Vitamin A ester: Liver; composition, synthesis by liver microsomes, *Futterman and Andrews,* 4077

Synthesis by retina, composition, *Futterman and Andrews,* 81

Vitamin B_{12}: Analogues, methionine formation from N^5-methyltetrahydrofolic acid, *Weissbach, Redfield, and Dickerman,* 146

Role in methionine biosynthesis, avian liver, *Dickerman, Redfield, Bieri, and Weissbach,* 2545

Vitamin D: Phospholipid metabolism, *Thompson and DeLuca,* 984

Skeletal metabolism, *Clark and Smith,* 1266

W

Water: -Insoluble derivatives of urease, preparation and properties, *Riesel and Katchalski,* 1521

Wood: Alkali-treated; new cross-links, *Ziegler,* PC2713

X

Xanthine-8-carboxylic acid: Metabolism by *Alcaligenes faecalis, Dairman and McNutt,* 3407

Xanthine dehydrogenase: Chick liver; hydrogen transfer between hypoxanthine and dimethylbiacridylium nitrate, kinetics, *De Angelis and Totter,* 1012

Xanthine oxidase: Competitive inhibition by urea and guanidinium ion, *Fridovich,* 3519

Electron transfer sequence, direct studies by electron paramagnetic resonance spectroscopy, kinetic studies employing rapid freezing, *Bray, Palmer, and Beinert,* 2667

Xanthine oxidase—*Continued*

Electron transfer sequence, direct studies by electron paramagnetic resonance spectroscopy, techniques and description of spectra, *Palmer, Bray, and Beinert,* 2657

Inhibition, amino group reagents, *Greenlee and Handler,* 1096

Substrate specificity, effect of pH, *Greenlee and Handler,* 1090

Xanthosine 5′-phosphate aminase: Induction by ribosyl-4-amino-5-imidazolecarboxamide, purine-requiring mutants of *Escherichia coli* B, *Kuramitsu, Udaka, and Moyed,* 3425

Xylitol: Metabolic pathways, *Aerobacter aerogenes, Fossitt, Mortlock, Anderson, and Wood,* 2110

Y

Yeast: Alcohol dehydrogenase: equilibrium reaction rate and mechanism, *Silverstein and Boyer,* 3908

Brewers'; bakers' and, purification of enolase yielding single active component, *Westhead and McLain,* 2464

—; nucleoside triphosphate-nucleoside diphosphate transphosphorylase, *Ratliff, Weaver, Lardy, and Kuby,* 301

Z

Zinc: D-Lactic-cytochrome reductase component, function, *Cremona and Singer,* 1466

Zinc enzyme: Neutral proteinase of *Bacillus subtilis, McConn, Tsuru, and Yasunobu,* 3706

Zinc ions: Deoxyribonucleic acid synthesis, rat liver, requirement, *Fujioka and Lieberman,* 1164

XUM
